Appropriation (Adjusted)	\$3,980,415	\$4,054,986	+\$74,571

Explanation of Changes in Financing

The Fiscal Year 1999 program has changed since the presentation of the FY 2000 budget as noted below:

1. Program Requirements. There has been a net increase to the appropriation (adjusted) of (+\$49,179). This net change is comprised of an increase in program requirements (+\$37,787) plus an increase in reimbursable authority of (+\$11,392).

Comparison of FY 1999 program requirements as reflected
in the FY 2000 Budget with FY 1999 program requirements
as shown in the FY 2001 Budget

Summary of Requirements
(\$ in Thousands)

	Total Program Requirements per FY 2000 Budget	Total Program Requirements per FY 2001 Budget	Increase (+) or Decrease (-)
Ships Support Equipment	\$954,401	\$948,436	-\$5965
Communications and Electronic Equip	1,184,901	1,646,128	-46,122
Aviation Support Equipment	243,679	247,148	-3,469
Ordnance Support Equipment	715,972	719,069	+3,097

Supply Support Equipment	89,537	89,230	-307
Personnel and Command Support Equip	74,063	98,411	+23,348
Spares and Repair Parts	246,506	243,891	-2,615
Total Fiscal Year Program	\$4,063,915	\$4,046,702	-\$17,213

Explanation by Budget Activity
(\$ In Thousands)

1. SHIP SUPPORT EQUIPMENT (-\$5,965) - Net decrease reflecting (-\$17,650) FY 1999 Congressional adjustments and internal reprogrammings (+\$11,685) including (+\$5,300) for Counter Drug Interdiction.

Explanation by Budget Activity (Continued)

(\$ In Thousands)

2. COMMUNICATIONS & ELECTRONIC EQUIPMENT (-\$46,122) - Net decrease reflecting (-\$9,307) FY 1999 Congressional rescissions, other Congressional adjustments (-\$17,026), offsets for high priority Navy programs, (-\$10,399), and internal reprogramming actions of (-\$9390).
3. AVIATION SUPPORT EQUIPMENT (-\$3469) - Net decrease reflecting (-\$15,243) Congressional adjustments, and internal reprogrammings (+11,774).
4. ORDNANCE SUPPORT EQUIPMENT (+\$3,097) - Net increase reflecting Congressional adjustments (-\$7,073), and internal reprogrammings (+\$10,170).
5. CIVIL ENGINEERING SUPPORT (-\$467) - Net decrease reflecting Congressional adjustments (-\$620), and internal realignments (+\$153).
6. SUPPLY SUPPORT EQUIPMENT (-\$307) - Net decrease reflecting Congressional adjustments (-\$307).
7. PERSONNEL & COMMAND SUPPORT (+\$23,348) - Net increase reflecting Congressional adjustments (+\$6,500), economic assumptions (-\$704), and increases for high priority Navy programs including paperless acquisition and smartcard (+\$16,144).
8. SPARES & REPAIR PARTS (-\$2,615) - Net decrease reflecting Congressional adjustments (-\$3,191), and internal realignments (+\$576).

Comparison of FY 2000 Financing as reflected
in FY 2000 Budget with 2000 Financing as
Shown in the FY 2001 Budget

(\$ In Thousands)

	Financing Per FY 2000 Budget	Financing Per FY 2001 Budget	Increase (+) or Decrease (-)
Program Requirements (Total)	\$4,142,091	\$4,343,500	+\$201,409
Program Requirements (Service Account)	(\$4,100,091)	(\$4,301,500)	(+201,409)
Program Requirements (Reimbursable)	(\$42,000)	(\$42,000)	0
Appropriation (Adjusted)	\$4,100,091	\$4,262,549	+\$162,458

Explanation of Changes in Financing

The Fiscal Year 2000 program has changed since the presentation of the FY 2000 budget as noted below:

1. Program Requirements. There has been a net increase to the appropriation (adjusted) of +\$162,458. This net change is comprised of an increase in program requirements (+\$184,596), less rescissions of (-\$22,138).

Comparison of FY 2000 program requirements as reflected
in the FY 2000 Budget with FY 2000 program requirements
as shown in the FY 2001 Budget

Summary of Requirements (\$ in Thousands)

	Total Program Requirements per FY 2000 Budget	Total Program Requirements per FY 2001 Budget	Increase (+) or Decrease (-)
Ships Support Equipment	\$858,709	\$910,427	+\$51,718
Communications and Electronic Equip	1,845,227	1,948,778	+103,551
Aviation Support Equipment	216,237	237,554	+21,317
Ordnance Support Equipment	629,418	651,967	+22,549
Civil Engineering Support Equip	67,144	68,674	+1,530
Supply Support Equipment	139,628	139,984	+356
Personnel and Command Support Equip	67,598	70,961	+3,363
Spares and Repair Parts	276,130	273,155	-2,975
Total Fiscal Year Program	\$4,100,091	\$4,301,500	+\$201,409

Explanation by Budget Activity
(\$ in Thousands)

1. Ships Support Equipment (+\$51,718) – Net changes reflect FY 2000 Congressional adjustments (+\$51,718).
2. Communications and Electronics Equipment (+\$103,551) – Net changes reflect FY 2000 Congressional adjustments (+\$103,551).

Comparison of FY 2000 program requirements as reflected
in the FY 2000 Budget with FY 2000 program requirements
as shown in the FY 2001 Budget

Explanation by Budget Activity (Continued)
(\$ in Thousands)

3. Aviation Support Equipment (+\$21,317) - Changes reflect FY 2000 Congressional reductions (-\$8953), and Congressional increases (+\$30,270).
4. Ordnance Support Equipment (+\$22,549) - Changes reflect FY 2000 Congressional adjustments (+\$13,345), and DoN internal realignments (+\$9,204).
5. Civil Engineering Support Equipment (+\$1,530) - Changes reflect FY 2000 Congressional adjustments (+\$1,530).
6. Supply Support Equipment (+\$356) - Changes reflect FY 2000 Congressional reductions (-\$744), and Congressional increases (+\$1,100).
7. Personnel and Command Support (+\$3,363) - Changes reflect Congressional reductions (-\$286), and Department realignments (+\$3,649).
8. Spare and Repair Parts (-\$2,975) - Changes reflect FY 2000 Congressional reductions (-\$1,435) and internal reprogrammings (-\$1,540).

THE AN/SPS-49(V) IS A NARROW BEAM, VERY LONG RANGE, TWO DIMENSIONAL AIR SEARCH RADAR WHICH WAS DEVELOPED IN RESPONSE TO SOR-17-07 AND APPROVED FOR SERVICE USE IN JULY 1977. IT PROVIDES FREQUENCY DIVERSITY IN A PREVIOUSLY UNUSED FREQUENCY BAND, REDUCES ELECTRONIC INTERFERENCE BETWEEN SHIPS AND DIMINISHES THE EFFECTIVENESS OF JAMMERS BY FORCING THEM TO SPREAD THEIR JAMMING ENERGY OVER A WIDER RANGE OF FREQUENCIES.

EQUIPMENT INSTALLATION - FUNDING IS FOR THE INSTALLATION OF EQUIPMENT, INCLUDING FLEET MODERNIZATION PROGRAM INSTALLATIONS, INSTALLATION OF TRAINING EQUIPMENT AND INSTALLATION OF EQUIPMENT IN OTHER SHORE FACILITIES.

Description: The AN/SAY-1 is a lightweight, state-of-the-art imaging/laser system manufactured by Boeing Company, formerly McDonnell Douglas Aircraft, Huntington Beach, California. This system provides Electro-Optic (EO) capabilities for improvement of Integrated Ship Defense (ISD) system against air Anti-Ship Missile defense and surface (mine and small boat attack) threats. The Thermal Imaging Sensor System (TISS), now nomenclatured as the AN/SAY-1, is installed by Tiger Teams prior to ship deployment.

Remaining funds provide for installation of systems previously procured.

AN/SQQ-89(V) Surface ASW Combat System/213600/5

Program Element for Code B Items:

Other Related Program Elements

	Prior Years	ID Code		FY 1999	FY 2000	FY 2001	FY 2002	FY 2003	FY 2004	FY 2005	To Complete	Total
QUANTITY												
COST (In Millions)				\$23.2	\$31.7	\$14.3	\$23.3	\$39.7	\$58.6	\$63.5	\$342.6	\$596.9
SPARES COST (In Millions)												\$0.0

The AN/SQQ-89 is a fully integrated surface ship ASW combat system with capability to detect, classify, localize and attack submarine targets. AN/SQQ-89(V) is the ASW Combat System for new construction DDG51 class ships and backfitted on CG47, DD963, and DDG51 class ships. The AN/SQQ-89(V) configuration will vary based upon ship class, system production configuration, and pre-backfit configuration of each ship. This budget supports modernization of existing AN/SQQ-89(V) systems.

The AN/SQQ-89(V)12 upgrade (EC-84) replaces the analog electronics of the SQS-53B Sonar with digital COTS processing and modern displays on CG47 class ships.

The AN/SQQ-89A(V)15 backfit upgrade will capitalize on the AN/SQQ-89(V)15 forward fit investment and will integrate a new tactical towed array sensor (MFTA) to provide a COTS-based USW combat system which will provide the capability for medium-frequency bistatic and multi-static sonar operations.

The Torpedo Alertment upgrade focuses on providing a commercially-based Open System Architecture into which we insert torpedo alertment capabilities (TRAFS - Torpedo Recognition and Alertment Functional Segment), integrated tactical picture capabilities (TDSS/CADRT - Tactical Decision Support Subsystem/Computer Aided Dead Reckoning Tracer), a SIMAS II performance prediction system (AN/UYQ-25B), and the System Level Recorder.

The Fire Control/TDSS EC's lines include the AEGIS Tactical Executive System (ATES) upgrade for DDGs 51 thru 53 and CGs 65 thru 72, upgrade of previously procured TDSS systems to the CADRT configuration, and upgrade of the MK 116 Fire Control System to enable the AN/SQQ-89(V) system to continue to interface with the AEGIS C&D (command and decision) system and provide safe tactical employment of new weapon types including the MK50 and MK 54 digital torpedoes.

The SSAAC (Surface Ship Acoustic Analysis Center) upgrade improves ASW data analysis and display capabilities at the Norfolk, VA center.

FMP Installation: Funding is for the installation of equipment by "K" ALTs through shipyards and/or Alteration Installation Teams (AIT).

This program procures submarine systems and equipment to maintain clear acoustic, tactical, and operational superiority over the entire spectrum of submarine and surface combatant threats.

Procurements provide upgrades/support to 688 Class, 688I Flight and SEAWOLF Class SSN's.

All future Acoustic Upgrades of Acoustic-Rapid COTS Insertion (A-RCI) equipment are incorporated into this budget item. A-RCI is a multi-phased, evolutionary effort geared toward addressing Acoustic Superiority through the rapid introduction of interim development products applicable to SSN 688, 688I and SSBN 726 Class Submarines. A-RCI includes the AN/BSY-1 ECP 1000 Acoustic Upgrade, Medium Frequency Active Improvement (MFAI), and the AN/BSY-1 HF Upgrade programs. A-RCI Phase I provides interim AN/BSY-1 (ECP 1000) capability of TB-29 Spatial Vernier (SV) Processing and Full Spectrum Processing. A-RCI Phase II provides full TB-29 SV Processing. Phase III completes system integration and is the baseline for SSN 688, 688I and SSBN 726 Class Submarines. Phase III provides Spherical Array (SA) Processing. Phase IV provides AN/BSY-1 High Frequency Active Upgrades. A-RCI received MSII approval on 05/96, including the decision to procure the first two (2) A-RCI TA Upgrade Kits for 688 and 688I. The program successfully completed a program review in April 1999 approving the FY99 procurement options. The RDT&E program element is PE 0604503N/F0219. TECH EVAL/OPEVAL is scheduled for completion in 4Q/FY00 and Milestone III approval is planned for 1Q/FY01.

SA101 AN/BQQ-5 UPGRADES:

Procures A-RCI TA, SA, SV and TA to SA Upgrade Kits; supports the refurbishment and installation of the upgrades.

SA102 TOWED SYSTEMS:

Towed Array refurbishment material required to support reliability improvements and upgrades to SPALT-9080, TB-16, TB-23, TB-29 Arrays and Towed Array Handling Systems procured through this line. Handling system reliability improvements include: improved cables in the outboard systems, new slip rings, EMI improvements, roller boxes, and additional hydraulic filtering. The Towed Array improvements include: improved internal connectors, tank and pendant cables, and hydrophones. There is also a block upgrade program planned to add heading sensors and a wideband hydrophone to increase performance to the arrays. These upgrades significantly increase the reliability and service life of the arrays resulting in fewer failures and an increase in inventory available for fleet use. This line also procures TB-29 () Arrays and OA-9070 () Handling Systems.

SA103 AN/BSY-1 UPGRADES:

Funding procures A-RCI TA, SA, TA to SA Upgrade Kits and HF Kits. Precision Bottom Mapping Kits procured through this line.

P-1 ITEM NOMENCLATURE

SSN ACOUSTICS 214700

SA201 BLOCK CHANGES:

Minor ECP's and hardware changes affecting the SSN688 Class and 688I Flight submarines are procured through this line.

SA202 PRODUCTION/ENGINEERING SUPPORT:

Funding supports the procurement of equipment of AN/BSY-1, AN/BQQ-5 and Towed System hardware.

SA203 UNIQUE TEST EQUIPMENT:

Funding procures various towed array and towed array handling system/stowage tube inspection test equipment.

SA301 MSRA/SMF:

Funding procures test equipment and piece part hardware to support the AN/BSY-1 and AN/BQQ-5 Module Screen and Repair Activity (MSRA). The MSRA, equipped with analog and digital automatic test equipment (ATE) and test programs sets (TPS), provides an enhanced capability to screen and repair Standard Electronic Modules (SEM) at the Intermediate Maintenance Activity.

SA302 OP TRAINER UPGRADES:

Funding procures hardware upgrades and production engineering for AN/BSY-1 and AN/BQQ-5 operational trainer sites.

SA303 ORGANIC REPAIR DEPOT/DMSMS:

Procures equipment to support AN/BSY-1 and AN/BQQ-5 organic repairs for items beyond the repair capabilities of MSRA. The depot will be equipped with analog and digital ATE and TPS's necessary to screen and repair SEM modules. Also procures COTS Tech Insertion and Refresh Material. Provides for APB Integration.

SA401 INITIAL TRAINING:

Provides for initial training curriculum development, training management materials, exercise control group development, pilot services and services to the Fleet.

SA500 AN/BQG-5 WAA:

Funding supports Wide Aperture Array Shore Spares for both AN/BQG-5 and AN/BSY-2 systems. Funding also supports engineering changes and logistics updates unique to the AN/BQG-5 systems.

OTHER PROCUREMENT, NAVY/BA: 2

P-1 ITEM NOMENCLATURE

SSN ACOUSTICS 214700

SA501 AN/BSY-2:

Funding supports engineering changes and upgrades, EOL parts program and Consolidated Shore Facility (CSF) Upgrades in support of the AN/BSY-2 program. This funding also supports procurement, installation and test of B2-CI Phase 1 and 2 Kits, as well as the Integration and test of B2-CI Phase 1 hardware which replaces obsolete Combat System Display Consoles in the AN/BSY-2 system with AN/UYQ-70 Common Display Console.

SA502 COMBAT SYSTEMS COMMONALITY:

Funding supports combat systems commonality efforts and incorporates increased funding provided by PBD 752. Funds provided in FY 00 for procurement and installation of improved processor cards and disc drives for Signal Data Converter Stores which supports the fleet release of SFMPL 6.1 which provides complete range dependent search planning capability.

SA5IN EQUIPMENT INSTALLATION:

Funds actual hardware installation during shipyard and pierside availabilities.

SA900 CONSULTING SERVICES:

Includes specification validation, contract deliverable monitoring, prime contractor monitoring for cost, schedule and performance slips, ILS planning and coordination of GFI. Additional support will assess the impact of Diminishing Manufacturing Sources/Material Shortages (DMSMS) as Original Equipment Manufacturers discontinue their production lines. Life-of-type procurements will be accomplished where necessary based on these analyses. Also, consulting services will review and support analysis associated with the procurement of ATE and TPS's for the AN/BSY-1 and AN/BQQ-5 Organic Repair Depot and MSRA.

NOTE: FY 99 PROGRAM WAS INCREASED BY \$4.0M FOR BTR ACTIONS THAT SUPPORTED EFFORTS WITHIN THIS BUDGET LINE ITEM.

<p>This P-1 consolidates BLIs 221300/221305 SSTD, 217800 Surface Sonar Windows and Domes, 221500 Acoustic Communications, and 224700/224705/224706 Carrier ASW Module for FY 2000 through 2005.</p> <p>N86</p> <p>Surface Ship Torpedo Defense The Surface Ship Torpedo Defense (SSTD) System consists of the AN/SLQ-25A towed torpedo countermeasure, the Multi-Sensor Torpedo Recognition Processor (MSTRAP), and Launched Expendable Acoustic Devices (LEAD). The SSTD system enhances ship survival capability against advanced acoustic and non-acoustic homing torpedoes. The AN/SLQ-25A is in the Countermeasure Passive Subsystem of the SSTD System. The AN/SLQ-25A projects decoy signals into the water via a towed body deployed astern of the ship. The projected signals are generated by a transmitter located on the ship which is controlled by an operator. The Launched Expendable Acoustic Device (LEAD) Program provides the capability for launching acoustic countermeasures from surface ships. LEAD was developed under RDT&E PE 0603506N Surface Ship Torpedo Defense. The LEAD Initial Development Test and Evaluation occurred in October 1995 and Initial Operational Test and Evaluation occurred in October 1996. As a cost avoidance measure, initial procurement of LEAD components was approved 31 October 1996. Operational Test and Evaluation was completed in April 1997. Approval for limited production was granted in July 1997. Approval for full production was granted in May 1998.</p> <p>Surface Sonar Windows and Domes AN/SQS-26/53 Sonar Dome Rubber Windows are installed in CG47, DDG51, and DDG993 class ships. This program provides emergency replacement wire-reinforced, pressurized rubber acoustic windows which experience failure due to corrosion, fatigue, and impact in the splice region. The SDRW significantly improves the surface ship sonar performance by reducing flow-induced self-noise, and by providing increased source level receiving and sensitivity resulting from reduced attenuation. AN/SQS-56 SRD provides emergency replacement Sonar Rubber Domes for FFG-7 Class AN/SQS-56 active/passive duct sonar systems. Production Engineering support provides technical evaluation, failure analyses, implementation of the inwater one-side backscatter xray program, manufacturer GFE refurbishments, engineering and field service. An FY00 Congressional Plus-Up was authorized for continued development and implementation of composite bow dome technology, including the fabrication of permanent tooling.</p>

<p>N87</p> <p>Acoustic Communications</p> <p>Acoustic Communications provides two-way and one-way acoustic communications equipment for submarines and surface ships. The equipment consists of : (1) AN/WQC-2/2A, a stand alone, single side band, general purpose, voice, continuous wave, multiple tone communication for surface ships, submarines, and some shore activities; (2) AN/WQC-6 which provides long range coded signaling from surface ASW ships to attack submarines when interfaced with the AN/SQS-26/53 AND AN/BQQ-5; (3) AN/BQC-1(), a stand alone emergency voice and signal beacon for submarines, and (4) technical improvements (Engineering Changes) to acoustic communication equipment. The FY 98 - FY 01 funding will provide for continued procurement of both Probe Alert (AN/WQC-6) improvements and AN/WQC-2A Engineering Changes plus associated production engineering support and Consulting Services. This FY 98 - FY 01 funding procures the aforementioned improvements and changes for the SSN 21, SSN 637, SSN 688, SSBN 726, DD963, DDG 51, CG 47, MHC 51, MCM 1, CVN 65, ARS 50, FFG 7, and CVN 68 class ships and submarines.</p> <p>N88</p> <p>Aircraft Carrier Tactical Support Center</p> <p>The CV-TSC of the Carrier Combat Direction System (CDS) is the focal point of supply for force ASW/SUW functions. The system supports the multi-mission, tactical employment of embarked airborne weapon systems (S-3B and SH-60 Helicopters) by providing mission planning, in-flight support and post mission assessment/intelligence collection. CV-TSC provides real time and post mission analysis of relayed or taped acoustic and non-acoustic signals to support CV/CVN USW Self Defense. The system consist of digital computers, commercial workstation displays, mass memories, plotters, acoustic analysis equipment and interface devices. The CV-TSC furnishes timely evaluated USW and SUW information to the Officer in Tactical Command as inputs to the decision making process. Procurement of AN/SQQ-34A(V) CV-TSC baseline systems completed during FY98. Procurement of non-developmental engineering changes to maintain system IT-21 supportability and interoperability with embarked aircraft, airborne sensors, and shipboard interfaces will continue beginning in FY98. Naval Undersea Warfare Center (NUWC), Division Keyport has been designated as the Alteration Installation Team (AIT) for all items. Installations will be accomplished at NUWC, the CV-TSC training site at Fleet Combat Training Center Atlantic (FCTCL) Dam Neck, VA, CV-TSC Ashore NAS/JAX, FL, and on board CV-63 through CVN-75.</p> <p>FY 2000 provides for procurement, integration and installation of five (4) CV-TSC Engineering Change One (EC-1) supportability and IT-21 interoperability updates and three (3) RTSDL. FY 2001 provides for procurement, integration and installation of three (3) CV-TSC Engineering Change One (EC-1) supportability and IT-21 interoperability updates and one (1) RTSDL.</p>

This program procures hydrophones, transducers, cables, and acoustic windows for In-Service Under Sea Warfare Sonars on all classes of submarines. The components are required to support units in the fleet on a replacement basis, at regularly scheduled ship overhauls, at interim availabilities when units are defective, and for upgrades.

PU100 SONAR SWITCHES AND TRANSDUCERS

Included in this line are procurements of transducers, hydrophones, windows, cables, domes, their support equipment and materials for the following Under Sea Warfare Sonars: BSY-1, BSY-2, BQQ-5, BQQ-6, BQS-15, BQS-14A, WQC-2, WLR-9/12, BQN-17, BQA-8, and BQH-1.

PU200 ENGINEERING CHANGES

Funds ECPs and hardware changes affecting the SSN688, 688I, and SSBN 726 (TRIDENT) Class submarines.

PU300 PROGRAM SUPPORT

Supports the procurement of equipment of sonar hydrophones, transducers, cables, and acoustic windows for In-Service Under Sea Warfare Sonars.

*FY 99 PROGRAM WAS REDUCED BY \$2.8M FOR BTR ACTIONS THAT SUPPORTED SIMILAR EFFORTS WITHIN ANOTHER BUDGET ITEM.

The Fixed Surveillance System (FSS) program is a major portion of the Integrated Undersea Surveillance System (IUSS). FSS consists of fixed deep water arrays connected to shore processing sites, called Naval Ocean Processing Facilities, by over 30,000 nautical miles of undersea cable. The system supports Fleet Commands and tactical forces by detecting, tracking, and reporting information on submarines, surface ships and aircraft over the oceans. In addition to this primary mission the system is also used for other surveillance and research efforts such as: long term oceanographic studies, undersea geological observation, mammal research, fishery regulation, environmental research and drug interdiction. The objectives of the current program are:

- To reduce system operations and maintenance costs by upgrading the current shore processing with improved NDI electronics at all active sites.
- To retain the capability to both maintain and install undersea surveillance systems.
- To improve tactical communications with the Fleet. Improved communications using standard Navy equipment will decrease reporting time and reduce the maintenance requirements.

The program includes the following major elements:

- Ship Improvement: Procurement of mission equipment to improve operational readiness for IUSS cable ship.
- Cable Upgrade/Engineering: FY99 is the last procurement of fiber optic cable and associated cable engineering and loading.
- Shore Electronics: Communications and ASWC4I procurements to provide upgraded capabilities and interoperability.
- Special Projects: Hardware procurements in accordance with international agreements.
- Shore Processing: Procurement of improved shore processing equipment.

The FY99 through FY05 program procures upgraded ship electronics, handling, tracking and repair equipment and procures Communications and ASWC4I systems to support IUSS requirements to ensure current operational and tactical information availability and to maintain communications connectivity. FSS maintains cooperative agreements with foreign countries. The details of these special projects agreements are of a higher classification.

JUSTIFICATION OF BUDGET YEAR: NDCP #78 of Jan 80, CNO ltr Ser 242/2S587554 of 4 Jan 92, CNO ltr Ser 02B/2S587552 of 9 Jun 92 and CNO msg 281420Z Dec 93.

INSTALLING AGENTS: General Dynamics, Greensboro, NC; Lockheed/Martin, Manassas,VA; SSC Charleston, Charleston,SC and MSC, Washington, D.C.

COST (in millions)		\$12.5	\$7.2	\$5.5	\$17.2	\$9.3	\$19.4	\$24.2	Continuing	Continuing
<p>PROGRAM COVERAGE: Surveillance Towed Array Sensor System (SURTASS) is a mobile, tactical arm of the Navy's undersea surveillance capability that provides long-range and littoral acoustic detection and cueing for tactical weapons platforms against both diesel and nuclear submarines. Dedicated T-AGOS ships towing long acoustic arrays relay acoustic data via satellite to shore facilities for processing. There are three configurations of T-AGOS ships with differing capabilities as follows: (1). T-AGOS monohull ships, SCN funded FY79 to FY87, are currently equipped with long passive receiving arrays or twinline receiving arrays with the SURTASS processing and display suite. Of the original eighteen monohulls, three are in active service. (2). Four "small" T-AGOS Small Waterplane Area Twin Hull (SWATH) ships were SCN funded FY87 through FY89. This ship incorporates the improved detection and classification capabilities and onboard analysis developed by the SURTASS Block Upgrade program including the Reduced Diameter Array (RDA) and A180R arrays. The RDA and A180R arrays provide improved passive capability and allow those ships equipped with it to operate in a bi-static mode with T-AGOS ships equipped with Low Frequency Active (LFA) systems. These four small SWATH ships are equipped with standard Desktop Computer (DTC II) processing and display configuration and have been upgraded with an improved tactical communications suite. (3) The first "large" SWATH ship, T-AGOS 23, will be delivered in FY00. It includes the Next Evolution architecture: Force and UltraSPARC high speed computers and large data storage devices, and will be the first T-AGOS ship equipped with Low Frequency Active (LFA) capability. This active capability will provide greatly improved detection against diesel submarines as well as the quiet nuclear threat. In addition to the eight T-AGOS ships above, three shore sites are configured with SURTASS Block Upgrade and Next Evolution processing and display suites to receive the T-AGOS acoustic data via SHF satellite communication links, analyze it and correlate it with the IUSS fixed shore site arrays, and provide the resulting contact information to the tactical commanders. A cost sharing agreement with Japan also provides a shore site and two Japanese SWATH ships with a similar capability to the TAGOS SWATH ships for the Western Pacific region. The Japanese Auxiliary Ocean Surveillance Ship (JAOS) SWATH ships are being upgraded to Next Evolution processing and display suites and currently utilize the original Production Baseline Arrays. Under the cost sharing agreement JAOS ships are being upgraded to the next evolution computer processing and display equipment and to the newer A180R or twinline passive receiving arrays.</p> <p>OPN funded procurements include: VG006 provides for procurement and upgrade of twinline arrays, common tow cables and common TB 29 arrays, procurement of LFA trainers, and communications upgrades ADNS and DMR; VG007 funds changes resulting from in service improvements of communications equipment, arrays, processing and display equipment; VG010 funds shore and ship electronics upgrade; and VG776 funds the installation of equipment.</p> <p>FY99: Funds are required for the following:</p> <ul style="list-style-type: none"> VG006 Block Upgrade (JAOS) provides for upgrade of JAOS ship mission equipment to Next Evolution configuration. Twinline array provides for array receiver improvements for littoral areas. VG007 Field Changes/Modifications provide for correction of deficiencies identified by Fleet use, array support equipment, communication equipment, replacement of aging/unsupported equipment. VG010 Next Evolution processing and display upgrades provide ship processing suite for twinline arrays. VG776 Installation of equipment.

MODIFICATION/TITLE: LFA Trainer-IOSC/Dam Neck
 COST CODE VG006

MODELS OF SYSTEMS AFFECTED: SURTASS T-AGOS Ships and Shore Facilities

DESCRIPTION/JUSTIFICATION: Low Frequency Active capability on SWATH ships will be IOC in FY01. The LFA trainer will provide operational and maintenance training for ship operators and/or MILDET personnel at IOSC. This trainer will provide processor strings, stim and TCG for passive or active training and/or post mission analysis.

BUDGET ITEM JUSTIFICATION SHEET							DATE February 2000				
APPROPRIATION/BUDGET ACTIVITY OP,N - BA2 COMMUNICATIONS & ELECTRONIC EQUIPMENT							P-1 ITEM NOMENCLATURE Tactical Support Centers (#2246)			SUBHEAD 52WH	
	PY	FY 1998	FY 1999	FY 2000	FY 2001	FY 2002	FY 2003	FY 2004	FY 2005	TO COMP	TOTAL
QUANTITY											
COST (in millions)			\$2.6	\$4.4	\$6.2	\$6.1	\$5.6	\$5.8	\$5.9	Continuing	Continuing

Narrative Description/Justification: The Tactical Support Center (TSC) program provides evolutionary systems and ancillary equipment upgrades to support the Maritime Sector Commanders (Ashore) with the capability to plan, direct and control the tactical operations of Joint and Naval Expeditionary Forces and other assigned units within their respective area of responsibility. These operations include littoral, open ocean, and over land all sensor (i.e. EO, IR, ISAR, etc.) surveillance, anti-surface warfare, over-the-horizon targeting, counter-drug operations, power projection, antisubmarine warfare, mining, search and rescue, and special operations.

The Tactical Support Center (TSC) program includes fixed site TSCs and Mobile Operations Control Centers (MOCCs). TSC's provide C4I capability, air-ground, satellite and point-to-point communications systems; sensor analysis capabilities; avionics and weapons system interfaces and facilities equipment. MOCC is a scalable and mobile version of the TSC for contingency operations and for support of operations from airfields that do not have a TSC.

WH046. Upgrade Equipment. This cost code contains TSC sensor analysis capabilities, avionics and weapons system interfaces, computer upgrades and associated software for interfacing analysis and processing equipment to the supported weapons systems (aircraft).

WH050. Facilities Equipment. This Cost Code contains the Facilities Equipment necessary to power and support the processing equipment and interfaces.

The FY99 Budget Request Procures: 1. TSC Upgrade Equipment; 2. Installation of Equipment.

The FY00 Budget Request Procures: 1. TSC Upgrade Equipment; 2. Facilities Equipment; and 3. Installation of Equipment.

The FY01 Budget Request Procures: 1. TSC Upgrade Equipment; 2. Facilities Equipment; and 3. Installation of Equipment.

INSTALLATION DATA: 15 TSC systems at 13 operational sites in FY99 and 14 TSC systems at 12 operational sites in FY00 (located at Keflavik, Iceland; Brunswick, ME; Jacksonville, FL; Sigonella, Italy; Rota, Spain; Kaneohe Bay, HI; Whidbey Island, WA; Kadena, Japan; Misawa, Japan; North Island, CA; Diego Garcia, Indian Ocean; Roosevelt Roads, Puerto Rico, and Masirah, Oman); 1 training site at Fleet Combat Training Center (FCTC) Dam Neck, Va and 1 ISEA site at SSC CHARLESTON DET Patuxent River. 8 MOCCs (Homeported at Brunswick, ME; Jacksonville, FL; Sigonella, Italy; Barbers Point/Kaneohe Bay, HI; Misawa, Japan; Whidbey Island, WA; Willow Grove, PA; and Point Mugu, CA.

Mobile Systems C2 Engineering Development, Software Support Facility (SSC CHARLESTON).

PROGRAM DESCRIPTION/JUSTIFICATION:

The Anti-Ship Missile Defense (ASMD) Electronic Warfare (EW) Project (formerly Design-to-Price EW Program), provides a family of modular shipboard electronic warfare equipments which are installed in most CV/CVN, combatants and auxiliaries in the Navy. The equipments consist of five configurations. The (V)1 and (V)2 are computer controlled Electronic Support Measures (ESM) Systems that detect, sort, classify, identify and continuously display signals within frequency ranges. The (V)3 and (V)4 provide the capabilities of the passive system plus an integrated active electronic countermeasures response for all signals as a threat. The (V)5 provides for an ECM capability on smaller class ships.

FY 98 thru FY 00: FMP - Installation of equipment for the Fleet Modernization Program (FMP).

FY 98 thru FY 00: Non-FMP - Installation of training equipment at shore facilities/activities.

<p>JUSTIFICATION OF BUDGET YEAR REQUIREMENTS: This budget line is a consolidation of several shipboard Information Warfare (IW) exploit systems procurement lines (COMBAT DF (NARM 2419), OUTBOARD (NARM 2430), EW Support (SSEE) (NARM 2343), BGPHEs (NARM 2434)). These lines are being consolidated for efficiency of management and also as a reflection of greater commonality in the systems. This latter point reflects the continuing effort to collapse "stovepipes" in order to achieve a scaleable, modular open architecture cryptologic system made up of common hardware components and running common operator interface software. This consolidation aligns the procurement budget structure to coincide with the R&D and O&MN structures which were consolidated previously into common Shipboard IW Exploit Systems lines.</p> <p>(U) This line procures the following:</p> <p>(U) Automated Digital Acquisition Subsystem (ADAS) hardware and associated installation and production support. ADAS is an upgrade to the Combat DF (AN/SRS-1) system. Combat DF is an information warfare exploitation and direction finding system with the capability to detect, locate and identify hostile targets at long-range and input this information into the ship's tactical data system. The ADAS upgrade provides the foundation for exploitation of unconventional and Low Probability of Intercept (LPI) signal types.</p> <p>(U) The OUTBOARD System is currently ineffective against elements of the current/projected threat environment which includes counter narcotics operations. Its equipment is old and becoming expensive and impossible to maintain. An OUTBOARD Logistic Update Program was established to correct these deficiencies IAW an approved program management proposal by (a) replacing outdated equipment, establishing a common logistic support baseline, upgrading the Subsystem Direction Finder (DF) via an acquisition of hardware/software Engineering Change Proposal (ECP) to increase through-put speed, DF on Skywave Signals, and (b) modernizing the subsystems. A Cooperative Outboard Logistics Update (COBLU) joint cooperative program between the United States and the United Kingdom (U.K.) was established 1 July 1994 with a Memorandum of Understanding (MOU) being signed by both governments. The COBLU program provides upgrades to the existing OUTBOARD System (AN/SSQ-108) to provide Comprehensive Surface Tactical (CESM) capability to the 21st century. The program will make maximum use of already developed military and commercial signal exploitation equipment. The systems architecture will require minimal effort to implement future technologies necessary to handle the evolving threat. Program is being executed in two phases; Phase 0 is an interim update that focuses on transitioning Human Computer Interface (HCI) to a Joint Maritime Command Information System (JMCIS) environment and integrating with DFECF. Phase 1 focuses on a total update of front-end sensors.</p> <p>(U) Ships Signal Exploitation Equipment (SSEE) Phase 2 - procures permanently installed equipment which replaces obsolete equipment with Non-Developmental Items (NDI) and provides an open scaleable architecture for achieving commonality among surface cryptologic systems. SSEE provides the afloat cryptologist with a major portion of threat identification, analysis of Communications Intelligence (COMINT) as well as indications to radio direction finding assets. Equipment includes Receivers, RF Management Systems Recorders, Audio Distribution Systems, computers, radio direction finding systems, antennas, and ancillary hardware. SSEE PHASE 2 INCREMENT D: Procures equipment that will completely digitizes the system, adds signal analysis/processing capability and provides an open architecture that accommodates additional functional capabilities. The SSEE Increment D open system distributed client server architecture will use Digital Signal Processing (DSP), Versa Module Europa (VME) and VME Extensions for Instrumentation (VXI) components. Applications such as Desperado and Short Swing will be integrated into the Increment D system.</p>

APPROPRIATION/BUDGET ACTIVITY	P-1 ITEM NOMENCLATURE	SUBHEAD
OP,N - BA2 COMMUNICATIONS & ELECTRONIC EQUIPMENT	SHIPBOARD IW EXPLOIT SYSTEMS 2360	521U
<p>JUSTIFICATION OF BUDGET YEAR REQUIREMENTS: (continued)</p> <p>(U) The Transportable Radio Direction Finding (T-RDF) and associated deck and/or mast antenna is a complete communication band shipboard Direction Finding system for bearing computation for surface combatants designed to operate in the harsh shipboard environment.</p> <p>(U) The BGPHEs-ST provides the ability for cryptologic operators to monitor, record and analyze selected signals of interest. Reports can be prepared and information disseminated from the surface terminal via the Tactical Intelligence Information Exchange System (TACINTEL) or directly to the host ship's C4I network. BGPHEs-SYGATE allows for real time airborne payload connection/control using over-the horizon satellite communications as the link and allows the ship to conduct operations without a line of sight dedicated asset. BGPHEs -ST PROFORMA will convert BGPHEs-ST (V.1) system to (V.2) system, thus allowing for insertion of ELINT and Proforma subsystems. BGPHEs-ST is interoperable with the USAF Direction Finding/Communication Intelligence (DF/COMINT) and can be expanded to provide Electronic Intelligence (ELINT) coverage. BGPHEs will become the Navy's Signals Intelligence (SIGINT) component of the Distributed Common Ground Station (DCGS) and be multi-service interoperable and Joint SIGINT Avionics Family (JSAF) compliant. The BGPHEs-ST provides the ability for cryptologic operators to monitor, record and analyze selected signals of interest. Reports can be prepared and information disseminated from the surface terminal via the Tactical Intelligence Information Exchange System (TACINTEL) or directly to the host ship's C4I network. BGPHEs-ST is a fully digital, open architecture system residing on the SCI-GCSS LAN. It utilizes full Cryptologic Unit Digital Special Signals Processor, Desperado and GCP-8 ELINT processors will be added to the surface terminal to complement the Airborne receive and the Local VME (Versa Module Europa) Extended for Instrumentation (VUI) receive subsystems.</p> <p>(U) The Common High Bandwidth Data Link - Shipboard Terminal (CHBDL - ST) will provide a wideband data link between Navy/Joint airborne sensor systems and the shipboard processors of national second tactical reconnaissance programs. It is designed to communicate with the BGPHEs, the Joint Services Imagery Processing System - Navy (JSIPS-N), the Aircraft Carrier Tactical Support Center (CV-TSC), and the Joint Surveillance Target Attack Radar System (Joint STARS). CHBDL - ST benefits the fleet by providing a horizon extension for line-of-sight sensor systems for use in battle damage assessment or mission planning and is interoperable with the USAF U2 aircraft. Test support equipment has been budgeted for FY2000 to procure Programmable Ground/Support Equipment (PGSE) for for CHBDL CDL, Common Data Link, interoperability tests with UAV flight tests and and manned aircraft flight tests. Installations are accomplished by Alteration Installation Teams (AIT) during ship pier side availability.</p> <p>((U) Installation Agent(s): Installations are accomplished by formal shipalt by Alteration Installation Team (AIT).</p> <p>Code B Item: COBLU, RDT&E, DW, Program Element 0305885G, Milestone III, Feb 2000.</p>

Notes/Comments

MODIFICATION TITLE: ADAS-SHORE
 COST CODE 1U001/1U776

MODELS OF SYSTEMS AFFECTED:

DESCRIPTION/JUSTIFICATION: (U) Automated Digital Acquisition Subsystem (ADAS) hardware and associated installation and production support. ADAS is an upgrade to the Combat DF (AN/SRS-1) system. The ADAS upgrade provides the foundation for exploitation of unconventional and Low Probability of Intercept (LPI) signal types.

MODIFICATION TITLE: BGPHERS-SHIP
 COST CODE XU001/1U019/XU777/1U777

MODELS OF SYSTEMS AFFECTED:
 DESCRIPTION/JUSTIFICATION: (U) The Battle Group Passive Horizon Extension System (BGPHERS) extends the Battle Groups line-of-sight radio horizon by controlling remote receivers in an aircraft sensor payload. BGPHERS provides the ability for cryptologic operators to monitor, record, and analyze selected signal of interest. Reports can be prepared and information disseminated from BGPHERS via the Tactical Intelligence Information Exchange System (TACINTEL) or directly to the host ship's C4I network.

MODIFICATION TITLE: BGPHE-SY SYGATE Upgrade Kits - Ship
 COST CODE 1U024/1U777
 MODELS OF SYSTEMS AFFECTED:
 DESCRIPTION/JUSTIFICATION: BGPHE-SY SYGATE allows for real time airborne payload connection/control using over-the horizon satellite communications as the link and allows the ship to conduct operations without a line of sight, dedicated asset.

Notes/Comments

1. ONE DUAL BAND BACK FIT KIT WAS PROCURED IN FY97 BUT WAS NOT SEPARATELY PRICED. AWARDED AS PART OF CHBDL SYSTEM CLIN, LATE DELIVERY AS OF A RESULT OF VENDOR BEING BEHIND IN ITS PRODUCTION SCHEDULE.

BUDGET ITEM JUSTIFICATION SHEET									DATE: February 2000	
APPROPRIATION/BUDGET ACTIVITY						P-1 ITEM NOMENCLATURE			SUBHEAD	
OP,N - BA2 COMMUNICATIONS & ELECTRONIC EQUIPMENT						Common High Bandwidth Data Link 2434			52XU	
	PY	FY 1999	FY 2000	FY 2001	FY 2002	FY 2003	FY 2004	FY 2005	TO COMP	TOTAL
QUANTITY										
COST (in millions)		\$55.6	\$36.8							

Note: Common High Bandwidth Data Link transfers to the SHIPBOARD IW EXPLOIT SYSTEMS BLI 2360 in FY 01. Detail budget justification material for PY through FY00 is included in the SHIPBOARD IW EXPLOIT SYSTEMS for budget comparability.

PROGRAM COVERAGE:

(U) The Battle Group Passive Horizon Extension System (BGPHERS AND/ULQ-20) extends the Battle Group's line-of-sight radio horizon by controlling remote receivers in an aircraft sensor payload. Intercepted signals of interest are sent via the Common High Bandwidth Data Link (CHBDL) to the surface terminal (BGPHERS-ST). BGPHERS-ST is interoperable with the USAF Direction Finding/Communication Intelligence (DF/COMINT) and can be expanded to provide Electronic Intelligence (ELINT) coverage. BGPHERS will become the Navy's Signals Intelligence (SIGINT) component of the Distributed Common Ground Station (DCGS) and be multi-service interoperable and Joint SIGINT Avionics Family (JSAF) compliant.

JUSTIFICATION OF BUDGET YEAR REQUIREMENTS:

(U) The BGPHERS-ST provides the ability for cryptologic operators to monitor, record and analyze selected signals of interest. Reports can be prepared and information disseminated from the surface terminal via the Tactical Intelligence Information Exchange System (TACINTEL) or directly to the host ship's C4I network. BGPHERS-ST is a fully digital, open architecture system residing on the SCI-GCSS LAN. It utilizes full Cryptologic Unified Digital Special Signals Processor, Desperado and GCP-8 ELINT processors will be added to the surface terminal to complement the Airborne receive and the Local VME (Versa Module Europa) Extended for Instrumentation (VUI) receive subsystems. Beginning in FY 00, the BGPHERS-ST portion of this budget has been consolidated into the Shipboard IW Exploit budget (NARM 2360).

(U) The Common High Bandwidth Data Link - Shipboard Terminal (CHBDL - ST) will provide a wideband data link between Navy/Joint airborne sensor systems and the shipboard processors of national second tactical reconnaissance programs. It is designed to communicate with the BGPHERS, the Joint Services Imagery Processing System - Navy (JSIPS-N), the Aircraft Carrier Tactical Support Center (CV-TSC), and the Joint Surveillance Target Attack Radar System (Joint STARS). CHBDL - ST benefits the fleet by providing a horizon extension for line-of-sight sensor systems for use in battle damage assessment or mission planning and is interoperable with the USAF U2 aircraft. Test support equipment has been budgeted for FY2000 to procure Programmable Ground/Support Equipment (PGSE) for for CHBDL CDL, Common Data Link, interoperability tests with UAV flight tests and and manned aircraft flight tests.

(U) FY 99 procures 5 BGPHERS - ST systems, 5 CHBDL - ST systems, 1 Dual Band backfit kit, production support, and installation.

(U) FY 00 procures 3 CHBDL - ST systems, 6 Dual Simultaneous Mission (DSM)/Asynchronous Transfer Mode (ATM) backfit kits, 1 Dual Band backfit kit, 1 CHBDL test support equipment, production support, and installation.

(U) FY 01 procures 2 CHBDL - ST systems, 3 Dual Simultaneous Mission (DSM)/Asynchronous Transfer Mode (ATM) backfit kits, production support, and installation.

(U) Installation Agent(s): Installations are accomplished by formal shipalt by Alteration Installation Team (AIT).

This program consolidates the following programs in FY2000:

From: 251600 AN/WLQ-4
 218000/05 Sonar Support Equipment
 232000/05 AN/WLR-1

To: 256000/05 Submarine Support Equipment Program

SSEP:

(U) The Submarine Support Equipment Program was established to develop and support systems which provide the capability to exploit signal intercepts and imagery for tactical support and early warning of threat sensors. The AN/WLR-8(V)2 is a tactical Electronic Warfare Support Measure (ESM) Receiver for the SSN 688 Class Submarines providing intercept, surveillance, and signal parameter analysis of electromagnetic signals for threat warning. Funds buy unique equipment in limited quantities that are maintained in a pool and rotated among attack submarines as dictated by scheduled operations and to provide specific capability improvements to major SSN sensor systems. This also procures support equipment for shore based acoustic intelligence analysis centers. This program also procures AN/WLR-8 (V)2 threat detection with an Instantaneous Frequency Monitoring (IFM) signal intercept capability that provides near 100% probability of intercept throughout the SHF frequency band. This improvement significantly increases the systems' capability to detect short duration and wideband threat emissions and will maintain the AN/WLR-8 as a viable ESM System beyond FY-2000. AN/WLR-8(V)2 Extremely High Frequency (EHF) Field Change Kits extend the receiver frequency range of the AN/WLR-8(V)2. This improvement upgrades the tactical threat warning capability to intercept the threat radar signals operating in the EHF frequency band. This also procures R&M and operational improvement field change kits and special mission support equipment.

A. ML002 - AN/WLR-8(V)2 Extremely High Frequency Field Change Kits will extend the frequency range of the AN/WLR-8(V)2

B. ML003 - SSEP special support equipment allows the procurement of special purpose test equipment utilized by the Type Commander Groom Teams. Exact quantities vary from year to year based on Fleet requirements. Provides analysis equipment for SSEP Aural Analysis Booths at New London, CT; Pearl Harbor, HI; and San Diego, CA. Equipment is used for analysis of AN/BQH-5(V)4 acoustic intelligence data. Six sets of equipments are required. Variable quantities bought in each fiscal year.

SUBMARINE SUPPORT EQUIPMENT/256000/256005

- C. ML005 - Procures AN/BRD-7 Reliability and Maintainability (R&M) Field Change Kits; bearing calculator improvement to enhance the direction finding capability of the AN/BRD-7 system; printers to replace existing obsolete printers in the AN/BRD-7 System.
- D. ML010 - Procures WLR-8 Field Change Kits to replace obsolete displays.
- E. ML011 - Procures AN/WLR-8 R&M Field Change Kits.
- F. ML013 - Procures special purpose test equipment to aid in testing and troubleshooting ESM Systems at the Submarine Intermediate Maintenance Activity (IMAs).
- G. ML014 - Provides for the refurbishment of the AN/WLR-8 Systems for backfit on SSN 688 Submarines.
- H. ML015 - Procures SSN ESM Backfit System Improvements in FY2000/1.
- I. ML016 - Procures HPI Reliability and Maintainability Field Change Kits and Field Change Kits to replace obsolete materials.
- J. ML017 - AN/BLQ-10 (V) FCKs
- K. ML018 - AN/BLQ (V) IEM FCKs
- L. ML5IN - Provides for the Installation of Equipment including Fleet Modernization Program Installations for Training Equipment and Installation of Equipment in Other Shore Facilities. Installations will be performed by Alteration installation Teams (AITs).
- M. MLDSA - The budget reflects the transfer of design services into the appropriate equipment P1 line item in accordance with full funding policy FY98 and out.
- N. ML6IN - Non FMP Installation funding for the HPI Field Change Kit.

SUBMARINE SUPPORT EQUIPMENT/256000/256005

AN/WLQ-4

(U) This line procures upgrades to the AN/WLQ-4(V)1 and modification kits resulting from redesign of obsolescent subassemblies of the AN/WLQ-4(V) Submarine ESM Systems. It procures spares and repair parts for the Mini-N-Suite. It supports training curricula updates for the WLQ-4(V)1 System. It procures upgrades to the AN/WLQ-4(V)/(V)1 software support and maintenance support equipment. Funding also procures Test Program Sets (TPS) which provide technical and workload capability to test all analog, digital, radio frequency, and hybrid spare units of the AN/WLQ-4(V)/(V)1 systems. TPSs are used with existing Automatic Test Equipment (ATE) located at the Repair Depot, NRAD, San Diego. The Repair/Test Stations include ATE, TPS, test fixture special repair tools, test equipment and documentation. The AN/WLQ-4 and AN/WLQ-4(V)1 Systems use many of the same modules. The description of each building block line item is as follows:

- A. ML019 - Reliability & Maintainability Mod Kits provides various AN/WLQ-4(V)1 upgrades, AN/WLQ-4(V)/(V)1 obsolescence replacement kits,, R&M Kits and Software Support Activity (SSA) equipment upgrades.
- B. ML020 - Mini-N-Suite - The funds provided in FY-98 thru FY-05 will be used to purchase repair parts for the Mini-N-Suite.
- C. ML021 - AN/WLQ-4(V)1 Trainer - The funds provided in FY-98 thru FY-05 will be used to procure curriculum updates associated with system upgrades and various R&M Mod Kits.
- D. ML022 - AN/WLQ-4(V)1 Depot Upgrade - The funds provided in FY-98 thru FY-05 will be used to provide various upgrades to system TPS as well as upgrades to Depot Test Support Equipment.
- E. ML023 - AN/WLQ-4(V)1 HPI (High Probability Intercept) Kits - The one (1) HPI Kit identified in FY-97 will be used as a Configuration Control Model (CCM) and the two identified by FY-98 will be used on ship installations.
- F. ML024 - AN/WLQ-4(V)1 Intermediate Maintenance Activity (IMA) Support.

SUBMARINE SUPPORT EQUIPMENT/256000/256005

SONAR SUPPORT EQUIPMENT

Program provides significant OPNAV approved performance enhancement field changes for in-service ASW sonars on submarines. It also provides life cycle support in producing field changes required because of aging, obsolete, or unreliable components or casualties. Funding is included for the installation of equipment including Fleet Modernization Program installations, trainer and shore site installations. In addition, various modifications to sonar general equipments are procured. This funding includes execution of the following major upgrades:

A. ML025* - Procures planned improvements for ancillary sonars, including their support equipment and materials

Procurement of the AN/BQS-15 Remote Ahead Profiling (RAP) improvement began in FY96. RAP provides a major display improvement for under-ice and mine avoidance operations. The total objective is 29 kits. One kit was procured in FY96; ten in FY97 and six in FY98. Twelve (12) will be procured in later years.

Procurement of nineteen (19) AN/UNQ-9 (IDARs replacement) systems in FY 98 and 39 in FY 99 for all FAST ATTACK Submarines. These will be a COTS modified system.

Procurement of thirty-two (32) COTS AN/BQN-17 UPGRADES, which is the primary depth sounder on SSN 688 Class Submarines, is planned FY-00.

Procurement of the AN/BQS-15 EC-19 Precision Bottom Mapping Upgrade is planned to start in FY02. This upgrade assists the ship in making decisions on how to safely exit the minefield. The total objective is twenty (20) kits. Nine (9) kits are planned for FY 02; five (5) kits are planned for FY03 and six (6) are planned for FY 05.

B. ML026 - Provides engineering upgrades for the Signal Data Converter Storer (SDCS) Interface Units. Upgrades incorporate combat system updates, interfaces and new functionality.

C. ML830 - Funds production engineering services that support procurement and installation of these systems.

D. ML900 - Funds consulting services that support procurement and installation of these systems.

E. ML5IN - Funds actual hardware installation during shipyard availabilities.

*ML025 (AN/BQN-17) FY00 Total cost includes contractor first article costs.

MODELS OF SYSTEM AFFECTED: AN/WLR-1H(V)7 TYPE MODIFICATION: _____ MODIFICATION TITLE: AN/WLR-1H(V)7 MOD KITS ML028

DESCRIPTION/JUSTIFICATION:

For FY-00 thru FY05 funding is for the procurement of modifications kits. These modification kits are required to replace obsolete and high maintenance components to extend the life cycle of the system until installation of AIEWS Increment 1 aboard CV/CVNs (N88) and to replace existing systems on WHEC Class Cutters (N86). Requirement includes the procurement of COTS/NDI equipment and the installation and support of the upgraded equipment.

PROGRAM DESCRIPTION/JUSTIFICATION:

The Navy Tactical Data System Program provides for the Advanced Combat Direction System as a general purpose Combat Direction System (CDS) in major warships, which permits rapid integration of ship sensor information, analysis and display of tactical information, and designation of weapon systems to force threats. ACDS consists of three major subsystems, namely, the Data Processing, Data Display and Data Link Subsystems. Data Processing and Data Display Subsystems are assigned to the Program Executive Office, Theater Surface Combatants and the Data Links are assigned to the Space and Naval Warfare Systems Command. The Advanced Combat Direction System (ACDS) is an upgrade to the NTDS Data Processing and Data Display subsystems and associated computer programs and documentation.

FY99 Funds are for:

(LU059) LHA ACDS - Funding is for the upgrade of the Integrated Tactical Amphibious Warfare Data System (ITAWDS) to an ACDS Block 0 in LHA 1 configuration during her FY 99 Complex Overhaul. ITAWDS is no longer supportable and interoperability with other units is severely limited.

(LU06I) Shore Site Emulation Equipment - Funding is for the procurement of display emulator systems/equipment and for upgrade of existing display emulator systems/equipment for shore sites.

FY-00 Funds are for:

(LU059) LHA ACDS - Funding is for upgrade of the LHA combat display consoles to AN/UYQ-70(v) window/Intel processor-based shipboard display emulators to replace obsolescent, maintenance intensive AN/UYA-4(v) display consoles.

(LU06I) Shore Site Emulation Equipment - Funding is for the procurement of display emulator systems/equipment and for upgrade of existing display emulator systems/equipment for shore sites.

<p>A. (U) Mission Description and Budget Item Justification: Cooperative Engagement Capability (CEC) significantly improves Battle Force Anti-Air Warfare (AAW) capability by coordinating all Battle Force AAW sensors into a single, real-time, composite track picture capable of fire control quality. CEC distributes sensor data from each ship and aircraft, or cooperating unit (CU), to all other CUs in the battle force through a real-time, line of sight, high data rate sensor and engagement data distribution network. CEC is highly resistant to jamming and provides accurate gridlocking between CUs. Each CU independently employs high capacity, parallel processing and advanced algorithms to combine all distributed sensor data into a fire control quality track picture which is the same for all CUs. CEC data is presented as a superset of the best AAW sensor capabilities from each CU, all of which are integrated into a single input to each CU's combat weapons system. CEC will significantly improve our Battle Force defense in depth, including both local area and ship defense capabilities against current and future AAW threats. Moreover, CEC will provide critical connectivity and integration of over-land air defense systems capable of countering emerging air threats, including land attack cruise missiles, in a complex littoral environment.</p> <p>(U) CEC consists of the Data Distribution System (DDS), the Cooperative Engagement Processor (CEP), and Combat System modifications. The DDS encodes and distributes ownship sensor and engagement data, is a high capacity, jam resistant, directive system providing a precision gridlocking and high throughput of data. The CEP is a high capacity distributed processor which is able to process force levels of data in a timely manner that allows its output to be considered real-time fire control data. This data is passed to the ship's combat system as high quality data for which the ship can cue its onboard sensors or use the data to engage targets without actually tracking them.</p> <p>CEC is planned for shipboard installations at various Naval and commercial shipyards aboard CG, DDG 51, CV/CVN, LHD, LHA and LSD 41 ship classes, and at land based test sites during scheduled ship availability periods.</p> <p>CEC was approved for entry into Engineering and Manufacturing Development (E&MD) in May 1995. Eleven (11) Advanced Development Models (ADM) and Engineering Development Models (EDM), and eleven (11) Pre-Production Units (PPU) were purchased under the development contract.</p> <p>Estimates include projected procurement savings from development of the Low Cost Planar Array (LCPA) under the CEC RDT&E,N progræ</p>

PROGRAM COVERAGE/JUSTIFICATION FOR BUDGET YEAR REQUIREMENTS:

This budget line is a consolidation of several GCCS-M procurement lines: GCCS-M Afloat (BLI 2608), GCCS-M Ashore (BLI 2804), JMCIS OED (2805), GCCS-M Support Equipment (BLI 3350), and GCCS-M Tactical Mobile (BLI 2906).

GCCS-M (Overall Description):

Global Command and Control System-Maritime (GCCS-M) is the Navy's fielded Command and Control system, a key component of the Copernicus ... Forward C4ISR strategy, and is the Navy's tactical implementation of the Joint Services Global Command and Control System (GCCS). GCCS-M has aggressively pursued an Evolutionary Acquisition strategy in rapidly developing and fielding new Command, Control, Computers and Intelligence (C3I) capabilities for Navy users. GCCS-M's latest phase includes migration to DISA's Defense Information Infrastructure (DII) Common Operating Environment (COE), incorporation of Fleet requirements for merging tactical and non-tactical networks, support for the IT-21 / Network Centric Warfare initiative and utilization of PC, WEB and other COTS Information Technology. System upgrades are required to support the evolutionary nature of the GCCS-M software releases in order to meet Fleet / mission requirements. GCCS-M Y2K system upgrades will be completed in FY99 and the remaining JMCIS'98 (NT) installations will occur during FY00-FY01. Major hardware and software Version Upgrades will occur during FY02-FY05.

JG010: GCCS-M Afloat (formerly referred to as Navy Tactical Command System-Afloat (NTCS-A) and Joint Maritime Command Information System (JMCIS) Afloat) provides Tactical C3I systems tailored to meet platform missions and functions to ensure joint interoperability among Numbered Fleet Commanders (NFC), Commander, Joint Task Force (CJTF), Joint Force Air Component Commander (JFACC), Office in Tactical Command (OTC), Composite Warfare Commander (CWC), Subordinate Warfare Commanders (SWC), Commander Amphibious Task Forces (CATF), Commander, Landing Forces (CLF) and Commanding Officer/Tactical Action Officer (CO/TAO). GCCS-M Afloat provides both General Service (GENSER) and Sensitive Compartmented Information (SCI) source information management systems which receive, process, correlate, fuse, assess, and display the readiness and disposition of own, neutral, and potentially hostile forces together with Electronic Warfare (EW) resource and environment information. GCCS-M Afloat provides tactical commanders with an accurate, reliable and survivable Common Operational Picture (COP) which includes complete all-source information management, display and dissemination, rapid access to organic/theater/national intelligence and databases, and multi-source data fusion and imagery exploitation.

GCCS-M Afloat provides C3I capability to 28 Force Level Ships (i.e., CV/CVN, LCC, LHA, LHD, MCS and AGF), 192 Unit Level Ships (i.e., AO/AOE/AE/ARS, CG, DD/DDG, FFG, MHC/MCM, LPD/LSD/LST), 66 Submarines (i.e., SSN/SSBN), 17 training sites, the Software Support Activity (SSA), and the In-Service Engineering Activity (ISEA). GCCS-M Afloat consists of the following tactical systems: GCCS-M, Shipboard Video Distribution System (SVDS), Contingency Theater Automated Planning Systems (CTAPS) / Theater Battle Management Core Systems (TBMCS) and Radiant Mercury.

BUDGET ITEM JUSTIFICATION SHEET		DATE
APPROPRIATION/BUDGET ACTIVITY OP,N - BA2 COMMUNICATIONS & ELECTRONIC EQUIPMENT	P-1 ITEM NOMENCLATURE GCCS-M (#2608)	SUBHEAD 52JG
<p>Force Level ships receive a GCCS-M GENSER system (UNIX and NT), a GCCS-M SCI system (UNIX and NT), a Shipboard Video Distribution System, a CTAPS / TBMCS system and a Radiant Mercury system.</p> <p>Unit Level ships receive a GCCS-M GENSER system (UNIX and NT).</p> <p>Submarines receive a GCCS-M GENSER system (UNIX and NT).</p> <p>Training Sites, the SSA and ISEA receive a GCCS-M GENSER system (UNIX and NT), a GCCS-M SCI system (UNIX and NT), a Shipboard Video Distribution System, a CTAPS / TBMCS system and a Radiant Mercury system.</p> <p>JG020: GCCS-M Ashore. Provides evolutionary systems and ancillary equipment upgrades to support CNO, Fleet Commanders in Chief, Unified Commanders, Type Commanders, Force Anti-Submarine Warfare (ASW) Commanders, and Submarine Operating Authorities worldwide. The GCCS-M Ashore provides a single system to receive, process, display, maintain and/or assess unit characteristics, employment scheduling, material condition, combat readiness, warfighting capabilities, and positional information of own, allied, and hostile forces. GCCS-M Ashore provides the tools necessary for operational commanders to execute plans, transmit tasking, and provide tactical information to subordinate forces.</p> <p>JG030: JMCIS OED. Provides evolutionary systems and ancillary equipment upgrades to support three Joint Intelligence Centers (JIC), one JIC Detachment, one Training Center and one Software Support Activity. JMCIS OED provides near-real-time all-source fusion, correlation and analysis tools for the analysis of multi-source intelligence to produce comprehensive tactical threat warnings, decision making support, and support of Over-the-Horizon-Targeting.</p> <p>JG040: GCCS (Joint). Is an operational multi-service/agency C4I program encompassing both strategic and tactical C4I functions. GCCS (Joint) supports the National Command Authority and the CINCs by providing C4I data processing capabilities, including status of forces and support requirements for use in national security decision making, force preparation and operational planning execution.</p> <p>JG050: GCCS-M Tactical/Mobile program provides evolutionary systems and ancillary equipment upgrades to support the Unified, Fleet, and Navy Component Commanders, the Maritime Sector, Theater, and the Naval Liaison Element Commanders (Ashore) with the capability to plan, direct and control the tactical operations of Joint and Naval Expeditionary Forces and other assigned units within their respective area of responsibility. These operations include littoral, open ocean, and over land all sensor (i.e. EO, IR, ISAR, etc.) surveillance, anti-surface warfare, over-the-horizon targeting, counter-drug operations, power projection, antisubmarine warfare, mining, search and rescue, and special operations. The Command and Control services provided include core GCCS-M capabilities, analysis and correlation of diverse sensor information; data management support, command decision aids; access to rapid data communication, mission planning and evaluation; dissemination of ocean surveillance positional data and threat alerts to operational users ashore and afloat. The GCCS-M Tactical/Mobile System includes the fixed site Tactical Support Centers (TSCs) and the Mobile Operations Control Centers (MOCCs) which is a mobile version of the TSC for contingency operations, the highly portable Mobile Ashore Support Terminals (MASTs) and the more robust Mobile Integrated Command Facilities (MICFACs). Beginning in FY01, the MAST and MICFAC systems will begin to transition into a single system called the Joint Mobile Ashore Support terminal (JMAST). This budget also includes funds for the MIUW Van Upgrades.</p> <p>PROCUREMENT DATA:</p> <p>The FY 99 Budget Procured: 1. GCCS-M Ashore Command Center Equipment; 2. GCCS Intelligent Workstations, Servers LAN hardware and software, communications equipment; 3. JMCIS OED upgrades; 4. TSC Upgrade Equipment; 5. MAST/MICFAC Equipment; 6. MIUW Van upgrades; 7. GCCS-M Afloat UNIX and JMCIS'98 (NT) C3I upgrade systems and Y2K software upgrades; and installation of Equipment, production engineering support and initial training.</p>

MODIFICATION TITLE: GCCS-M Afloat Shipboard Video Distribution System
 COST CODE JG023/JG010

MODELS OF SYSTEMS AFFECTED:
 DESCRIPTION/JUSTIFICATION:

The GCCS-M Afloat Shipboard Video Distribution System upgrade for Force Level ships provides the ability to route video signals (up to 96 inputs and 96 outputs) throughout selected areas of the ship. The system will be upgraded to provide digital signal routing via the IT-21 LAN to configured command, control and mission planning spaces on force level combatants and off board ship via VIXIS. These systems are part of GCCS-M Afloat with installations continuing through FY05.

GCCS-M Afloat Unit Level Upgrade
 JG028/JG010

The GCCS-M Afloat Unit Level system is the tactical C3I system for the BG / ARG Unit Level warfighting combatants and submarines and consists of both UNIX and NT servers and workstations running on a IT-21 LAN while providing the tactical commander with the COP, automated decision aids and an integrated tactical shipboard intelligence system that utilize joint organic, non-organic (remote sources) and environmental information/intelligence in the decision making and warfighting process. It also provides tactical commanders with an accurate, reliable and survivable Common Operational Picture (COP) which includes complete all-source information management, display and dissemination, rapid access to organic/theater/national intelligence and databases: and multi-source data fusion and imagery exploitation.

 DESCRIPTION/JUSTIFICATION:

GCCS-M Afloat Force Level Upgrade
 JG029/JG010

The GCCS-M Afloat Force Level system is the core battle group/force commander's warfighting system and consists of both UNIX and NT servers and workstations, color large screen displays, color large screen displays, remote displays and video switches running on a IT-21 LAN while providing the tactical commander with the COP, automated decision aids and an integrated tactical shipboard intelligence system that utilize joint organic, non-organic (remote sources) and environmental information/intelligence in the decision making and warfighting process. The Force Level system provides Tactical C31 systems tailored to meet platform missions and functions to ensure joint interoperability among various Fleet Commanders. It also provides both General Service (GENSER) and Sensitive Compartmented Information (SCI) source information management systems which receive, process, correlate, fuse, assess, and display the readiness and disposition of own, neutral, and potentially hostile forces together with Electronic Warfare (EW) resource and environmental information. Lastly, it provides tactical commanders with an accurate, reliable and survivable Common Operational Picture (COP) which includes complete all-source information management, display and dissemination, rapid access to organic / theater / national intelligence and databases, and multi-source data fusion and imagery exploitation.

GCCS-M Ashore
 JH031/JG020
 N/A
 Provides the Fleet Command, Unified Command Centers, and the Navy Command Center with a common C3I capability. Incorporates the former Navy WWMCCS Software Standardization (NWSS) functionality and migrates/consolidates the functionality from component systems into a new environment using iterative hardware/software releases. Offers distributed briefing capabilities among commands using video and large screen displays.

MODIFICATION TITLE: GCCS-M Tactical Mobile (#2906)
 COST CODE T4500/JG050
 MODELS OF SYSTEMS AFFECTED: N/A

Feb-00

DESCRIPTION/JUSTIFICATION: Mobile Ashore Support Terminal/Mobile Integrated Command Facility (MAST/MICFAC). This line procures various types of C4I equipment in order to provide a new or increased capability to the present MAST and MICFAC systems, and to replace the equipment when it has reached the end of service life, assuring interoperability with other C4I systems. These facilities were established and will be upgraded using the evolutionary acquisition approach.

<p>Narrative Description/Justification:</p> <p>PROGRAM COVERAGE/JUSTIFICATION FOR BUDGET YEAR REQUIREMENTS: The Naval Tactical Command Support System (NTCSS) is a multi-function program designed to provide standard tactical support information systems to various afloat and associated shore-based fleet activities. The mission is to provide the full range of responsive tactical support ADP hardware and software in support of the management of information, personnel, material and funds required to maintain and operate ships, submarines, and aircraft. NTCSS is to provide an efficient management of afloat tactical support data, through the use of standardized hardware and software, to meet the mission support information management requirements for force sustainment. On 6 June 1995, NTCSS and its component subsystems, discussed below, were selected as Command and Control migration systems under the auspices of ASD (C3I).</p> <p>NTCSS incorporates the functionality of the Shipboard Non-Tactical ADP Program (SNAP) systems, the Naval Aviation Logistics Command Management Information System (NALCOMIS), and the Maintenance Resource Management System (MRMS).</p> <p>SNAP is an automated information system that supports organizational level maintenance, supply, financial and administrative functions on afloat units, at Marine Aviation Logistics Squadrons (MALS) and at associated shore activities. Due to the age and obsolescence of SNAP I and SNAP II, these systems are being replaced with SNAP III in the 1994 through 2000 time frame. SNAP improves equipment supportability and maintainability and thus readiness through: improvement in the accuracy of maintenance, supply, financial and related support data maintained and reported by the ship; and acceleration of management report preparation and data transmission. The scope of SNAP includes approximately 300 sites.</p> <p>NALCOMIS is an automated, real time, interactive, management information system that provides a modern management tool for day-to-day management of aircraft maintenance at the organizational and intermediate levels. NALCOMIS automates management of the aviation repairables inventory, providing nose-to-tail tracking through the repair and operations cycles. The scope of NALCOMIS includes 66 aviation intermediate maintenance activities located afloat (CV/LHA/LHD/MALS), at Naval Air Stations (NASs), and approximately 326 Navy and Marine Squadrons.</p> <p>MRMS is an automated information system that supports ship intermediate maintenance management of the Atlantic and Pacific Fleets. MRMS supports Type Commands, Group Commanders, Area Coordinators, Readiness Support Groups, Submarine Squadrons, Ship Repair Facilities, and various Intermediate Maintenance Activities, both afloat and ashore, for budgeting, planning, production and analysis of ship maintenance. MRMS improves ship readiness through improved maintenance and ship repair management, information resource management, and maintenance data processing. The scope of MRMS includes approximately 16 shipboard and 65 shore based intermediate and maintenance and planning activities.</p> <p>Funding for FY99-01 procures: 1) NTCSS equipment upgrades for ships; 2) NTCSS equipment upgrades for Naval Air Stations, Squadrons, Shore Support Facilities, Fleet Training Centers and MALS; and 3) necessary production engineering and installation support</p> <p>INSTALLATION AGENT: All FMP installations will be accomplished by Alteration Installation Team (AIT).</p>

D. REMARKS												
Between years, shore site configurations changed, i.e., more larger sites in one year compared to another. As a result, the per unit costs are different. Moreover, different shore site configurations require different peripherals listed under the "Various" category, which leads to per unit cost differences in that category.

MODIFICATION TITLE: 261100 Naval Tactical Cc MALS/Shore Equipment Upgrades(52DY/DY006)

MODELS OF SYSTEMS AFFECTED: Provides modern centrally managed mission support ADP system upgrades, and IMA-Optimized and OMA-Optimized software to replace aging systems at MALS, Naval Air Stations, squadrons, and training sites.

DESCRIPTION/JUSTIFICATION: Application subsystems include/financial/inventory management, organizational and surface maintenance management, and administrative information systems support. NTCSS procurements will also provide ship/shore capabilities for displaying and storing CALS initiative information (digitized engineering drawings, automated technical manuals, etc.).

QUANTITY										
COST (in millions)		\$28.8	\$19.0	\$19.2	\$14.9	\$16.3	\$33.5	\$32.2	Continuing	Continuing
<p>PROGRAM COVERAGE: The Advanced Tactical Data Link Systems (ATDLS) funds the Time Division Multiple Access (TDMA) family of Link-16 terminals in the Joint Tactical Information Distribution System (JTIDS) terminals and the Tactical Digital Information Link J (TADIL J) message standard databases resident in the Command & Control Processor (C2P) sub-system. The Common Data Link Management System (CDLMS) is designated as Pre-planned Product Improvement (P3I) of the C2P. ATDLS also funds the LMS-16 Link Monitoring System.</p> <p>AN/URC-107(V) TERMINALS (JTIDS): AN/URC-107(V) Joint Tactical Information Distribution System (JTIDS) is an advanced radio system that provides information distribution, position location, and identification capabilities in an integrated form for application to military operations. The system is able to distribute information at high rates, encrypted to provide security, and with sufficient jam resistance to yield high reliability communications in a hostile electromagnetic environment. JTIDS provides the ability to interconnect multiple sources (air, ground, maritime, subsurface, and electronic warfare) and users of information. It provides surface and airborne elements with both a position location capability within a common position reference grid and an intrinsic identification capability through the dissemination of secure position and identity information. It is a multiservice system in that Army JTIDS interoperates with the U.S. Air Force, U.S. Navy, and U.S. Marines JTIDS Class 2 terminals.</p> <p>AN/UYQ-86 COMMAND AND CONTROL PROCESSOR (C2P) REHOST (C2P(R))/COMMON DATA LINK MANAGEMENT SYSTEM (CDLMS): AN/UYQ-86 C2P(R)/CDLMS program is the acquisition of commercial-off-the-shelf (COTS) versa module eurocards (VME) based Navy computers in conjunction with a software suite to provide the interface between tactical and digital communication systems and selected shipboard processors (Advanced Combat Direction Systems (ACDS) and AEGIS Command & Decision (C&D)). C2P extracts information from the Tactical Digital Information Links (TADILS) A, C & J (or Link-11, Link-4A, and Link-16), translates between TADILS and provides the information back to the on-board processor. This provides flexible capability for rapidly exchanging tactical information using a universal database for translating various Link formats while remaining independent of communication equipment and tactical data computing systems. C2P Rehost uses COTS hardware (AN/UYQ-70), making the system easier and cheaper to upgrade and maintain.</p> <p>CDLMS is designated as the pre-planned product improvement to the C2P. It is integrated with the C2P(R) via a set of commercial VME to provide enhanced, consolidated displays to monitor and analyze multi-TADIL networks graphically. All procurement of CDLMS hardware will include the Satellite-TADIL-J (S-TADIL-J), the Electronic JTIDS Network Library (EJNL) and Telelogistics IT-21 compliant hardware. S-TADIL-J is an additional set of cards and cables integrated into the CDLMS chassis, enabling the system to send Link-16 information over satellite, providing range extension beyond the Theater of Operation. E-JNL provides pre-defined networks (configurations of ships and aircraft) allowing immediate access to different operational configurations. This minimizes delays for reconfiguring the network when new platforms are introduced to a mission.</p> <p>LMS-16 (LINK MONITORING SYSTEM): The LMS-16 provides for improved Link-16 network diagnostics, system monitoring and control capabilities. Network performance monitoring by platform and time slot allocation provide critical data to optimize the Link-16 network. Ruggedized LMS-16 hardware/software will allow the operator to analyze the Link-16 network in real-time and adjust network performance to support Theater Air Defense/Theater Missile Defense by Battle Groups and Joint Task Forces.</p>										

BUDGET ITEM JUSTIFICATION SHEET		DATE
APPROPRIATION/BUDGET ACTIVITY OP,N - BA2 COMMUNICATIONS & ELECTRONIC EQUIPMENT		P-1 ITEM NOMENCLATURE Advanced Tactical Data Link Systems 2614
		SUBHEAD Q2DR/52DR
<p>JUSTIFICATION OF FY99 REQUIREMENTS: FY99 funds were used to procure AN/URC-107(V) JTIDS, ship terminals, antenna sets, and C2P(R)/CDLMS computer sets (including S-TADIL-J) for install on various ship classes . Work will continue to develop SIDS and SARS for integrating S-TADIL-J on multiple ship classes. CG59 was upgraded from AN/UYK-43 (old C2P unit) to a C2P(R). Funding also includes production support and training curriculum for CDLMS, Link-16 Alteration Installation Team (AIT) and shipyard installs.</p> <p>JUSTIFICATION OF FY00 REQUIREMENTS: FY00 funds will be used to procure C2P(R)/ CDLMS backfit, S-TADIL-J , E-JNL backfit kits, and associated production support. Installation funding includes CDLMS backfits to upgrade AN/UYK-43 to the AN/UYQ-70 configuration, including (2) training facilities, and AIT and shipyard installs for the remaining JTIDS terminals.</p> <p>JUSTIFICATION OF FY01 REQUIREMENTS: FY01 funds will be used to procure C2P(R) /CDLMS backfit computer sets, LMS-16, S-TADIL-J, E-JNL, and associated production support. Funding will also be used for Link-16 Alteration Installation Team (AIT) and shipyard installs.</p> <p>INSTALLATION AGENT: Space and Naval Warfare Systems Center, San Diego (SSC-SD) and Charleston (SSC-CH).</p> <p>DEFINITIONS OF COST CODES:</p> <p>DR001: AN/URC-107(V) (JTIDS): All hardware costs associated with AN/URC-107(V) JTIDS terminal hardware, antennas, filter devices and Engineering Change Proposals (ECP).</p> <p>DR003: AN/UYQ-86 (C2P/C2P(R)/CDLMS): All hardware costs associated with Command and Control Processor (C2P), C2P Rehost, Common Data Link Management System (CDLMS), Common Shipboard Data Terminal Sets (CSDTS), Satellite-TADIL-J, Electronic JTIDS Network Library (E-JNL), Telelogistics, and all associated ECPs.</p> <p>DR006: LMS-16 (LINK MONITORING SYSTEM): All hardware costs associated with a stand-alone LMS-16 workstation which includes monitor, keyboard, associated antenna and software license agreement.</p> <p>DR555: PRODUCTION SUPPORT: AN/URC-107(V), AN/UYQ-86: Annualized production support includes evaluation of AN/URC-107(V) JTIDS Consolidated Avionics Support System (CASS) Test Program Set (TPS), AN/UYQ-86 C2P(R)/CDLMS Engineering Change Proposals (ECP)s; and production support services for JTIDS, S-TADIL-J, CDLMS and E-JNL.</p> <p>DR666: TRAINING CURRICULUM: Training Curriculum (end-item) for CDLMS.</p> <p>DR777: INSTALLATION OF EQUIPMENT: Non-FMP installations includes Link-16 equipment installations into shore and training facilities. FMP installations are in support of Link-16 Alteration Installation Team (AIT), shipyard installs and DSA, Electronic Environment Effects testing (EEE), and installation engineering and integration coordination for the Fleet. Covers AIT ship installs for JTIDS/C2P(R), C2P(R)/CDLMS backfits, S-TADIL-J backfits, and E-JNL backfits.</p>

D. REMARKS

1. Sherikon, GAC, RJO. SSC San Diego integrates various commercial-off-the-shelf equipment. AN/UYQ-86 (C2P(R) / CDLMS) units are off-the-shelf hardware.
2. ACS Technologies, GAC Inc. and RJO Inc. ACS Technologies integrates various commercial-off-the-shelf components.
3. Competitive selection on GSA schedule.
4. DR003 - The FY 98 unit price includes funding of training curriculum and Telelogistics.
5. DR003 - The award date and date of first delivery represents the dates of the first contract to be awarded and the associated equipment integrated as a system and available for AN/UYQ-86 backfit installations. An additional six month lead time is required for AN/UYQ-86 forward fit installations.

MODIFICATION TITLE:
 COST CODE
 MODELS OF SYSTEMS AFFECTED:
 DESCRIPTION/JUSTIFICATION:

**AN/URC-107(V) (JTIDS) SHIP INSTALLATIONS
 DR001**

JTIDS is an advanced radio system providing information distribution, position location, and identification capability ("Identify friend-or-foe") at high rates of speed, crypto-secure, and jam resistant. In FY99, we procured the final JTIDS terminals, with installations scheduled for FY01. JTIDS will be replaced with the next generation equipment, Multi-functional Information Distribution System (MIDS) on Ship. Installation costs associated with JTIDS includes the cost of AN/UYQ-86 (C2P(R)/CDLMS).

Notes/Comments

- Total quantity meets inventory objective.
- JTIDS and C2P(R) are installed as a ship set.
- JTIDS and C2P(R)/CDLMS are installed as a ship set except for command ships. In FY 01, JTIDS is being installed on four command ships.

MODIFICATION TITLE: AN/UYQ-86 (C2P(R)/CDLMS) SHORE INSTALLATIONS
 COST CODE: DR003

MODELS OF SYSTEMS AFFECTED:
 DESCRIPTION/JUSTIFICATION: The C2P(R)CDLMS equipment performs data link processing functions and provides the interface between the Tactical Digital Information Links (TADILS) and selected shipboard processors. CDLMS provides the ability to graphically display multiple TADIL networks for monitoring and analysis. These efforts provide CDLMS shore installations (which do not require antennas) at selected training sites.

	1	2	3	4	1	2	3	4	1	2	3	4	1	2	3	4		
INPUT													1	1	1		8	69
OUTPUT														1	1	1	8	69

Notes/Comments:

- Total quantity meets inventory objective.
- Production leadtime varies between 12 to 18 months. For forward fit ships, JTIDS or MIDS on Ship and UYQ-86 (C2P(R)/CDLMS) are installed as a ship set except for command ships. Delivery of forward fit units take six months longer than those procured for backfit into existing suites. This is due to longer integration and testing time at the SPAWAR Systems Center.
- Installation costs are included in the JTIDS (DR001) or MIDS on Ship (DR010) installation costs.

MODIFICATION TITLE:
 COST CODE
 MODELS OF SYSTEMS AFFECTED:
 DESCRIPTION/JUSTIFICATION:

**AN/UYQ-86 (C2P(R)/CDLMS) BACKFIT SHIP INSTALLATIONS
 DR003**

The C2P(R)/CDLMS equipment performs data link processing functions and provides the interface between the Tactical Digital Information Links (TADILS) and selected shipboard processors. equipment. CDLMS provides the ability to graphically display multiple TADIL networks for monitoring and analysis. The purpose of C2P(R)/ CDLMS backfits is to upgrade the outdated AN/UYK-43 in the fleet with the newer AN/UYQ-86 COTS. CDLMS includes S-TADIL-J and E-JNL. Identified installation costs include S-TADIL-J installations planned in FY99, FY00 and FY01; and E-JNL installations planned in FY00.

PROGRAM DESCRIPTION/JUSTIFICATION :

Provide systems, subsystems, and engineering change kits for minehunting, navigation, and tactical display operations by the surface MCM force. Engineering change kits improve reliability and maintainability and correct deficiencies to allow equipment to perform in accordance with operational requirements. Also includes funding for the installation of equipment including Fleet Modernization Program installation.

Closed Loop Degaussing (LV065) : The Closed Loop Degaussing (CLDG) system automatically monitors and maintains a ship's static magnetic signature through on-board magnetic field measurements, a computer algorithm for predicting off-board magnetic fields, and an advanced degaussing control system.

Integrated Combat Weapon System (ICWS) (LV066): The Integrated Combat Weapons System (ICWS) Program is a series of major, incremental Block upgrades to the current combat systems to ultimately provide to the MCM Class Ships an affordable and fully integrated combat weapon system comprised of the AN/SQQ-32 Mine Hunting Sonar, the AN/SLQ-48 Mine Neutralization System, the AN/SSQ-94 Combat System Onboard Trainer, and the AN/SSN-2 Navigation System. There are three block upgrades:

Block 0 - Establishes a baseline for shipboard configuration

Block 1 - Transitions combat systems to an open systems architecture, develops common operator consoles and establishes an ATM/SONET local area network (LAN).

Block 2 - Improves performance of "wet end" equipment (sonar and mine neutralization vehicle)

PROGRAM DESCRIPTION/ JUSTIFICATION :

Shallow Water Mine Countermeasures (SWMCM) equipment is being developed to enable the US Navy to clear mines and light obstacles from the very shallow water and surf zones in preparation for an amphibious assault by the US Marines. Each of the equipments below is necessary to complete a "toolbox" for the Combat Engineer to perform this task.

SHALLOW WATER ASSAULT BREACHING SYSTEM (SABRE) - SW021: A linear demolition charge deployed into the deep end of the surf zone (10' - 3') to clear anti-invasion mines from the assault lanes.
NON-RECURRING (SABRE) - SW021: Explosives facility rehabilitation/upgrades and qualification as well as tooling essential to begin production.

FULL SCALE INERT TRAINERS - SW022: A full size inert version of the explosive SABRE system, to be used for mission training during operational exercises.

SUB-CALIBER TRAINERS - SW023: An inert, small scale version of the explosive SABRE system, to be used for school and unit training.

LAUNCH CONTROLLERS - SW024: An electrical control box for centralized initiation and status check of the SABRE and Distributed Explosive Technology (DET) systems on board the Landing Craft Air Cushion (LCAC) mission platform.

FULL MISSION TRAINER - SW025: An upgrade to the existing LCAC Full Mission Trainer (FMT) to incorporate essential Assault Breaching Systems functionality.

DISTRIBUTED EXPLOSIVE TECHNOLOGY (DET) - SW031: An array of detonating cord deployed into the shallow end of the surf zone (3' - 0') to clear anti-invasion and land mines from the assault lane.
Overall Flyaway costs remain at \$363K per system however, tactical systems are split into critical subcomponents surveillance units and first article.

FULL SCALE INERT TRAINERS - SW032: A full size inert version of the explosive DET system, to be used for mission training during operational exercises.

PROGRAM COVERAGE: Navigation Sensor System Interface (NAVSSI) is a surface and submarine based system that accepts and processes navigation input and distributes the processed output to user systems. NAVSSI provides position, velocity, time and almanac data to onboard command and control systems in real time with Global Positioning System (GPS) as the primary source of navigation data. The navigation team uses an automated work station that includes automated planning functions and the use of Digital Nautical Charts (DNC). NAVSSI uses Non-Developmental Item (NDI) hardware and a combination of off the shelf and newly developed software. The GPS VME Receiver Card (GVRC) replaces the 13 card GPS receiver with a single card and is hosted within NAVSSI.

JUSTIFICATION OF BUDGET YEAR REQUIREMENTS: Procurement and installation of Navigation Sensor System Interface (NAVSSI) is required to provide Global Positioning System (GPS) and other navigation sensor data to ship-board C4ISR, Combat, and Weapons Systems. NAVSSI enables utilization and display of electronic chart products. NAVSSI is the only available system that performs the full functions of collection, integration, and distribution of navigation data. Common charting and precision navigation data is required to allow a common and correlated ship-to-ship tactical and operational picture. NAVSSI ensures precise Strike and Theater Ballistic Missile Defense (TBMD) weapons systems to have the necessary navigational data. Failure to procure and install NAVSSI on the platforms would result in loss of critical navigation data distribution to Combat and Weapons Systems.

FY99 funding procures 12 NAVSSI systems, 11 retrofit kits, installations of 12 NAVSSI systems & 19 RTS..

FY00 funding procures 11 NAVSSI systems, 2 RTS retrofit kits, installation of 11 NAVSSI systems and install of 2 RTS.

FY01 funding procures 12 NAVSSI systems, 3 RTS retrofit kits, installation of 12 NAVSSI systems and install of 3 RTS.

Installations are being done for each class/ship through the preparation of ship alteration proposals and ship alteration records.

Installation Agent: Installation teams and/or overhaul - to be determined for each ship during execution.

MODIFICATION TITLE:

NAVSTAR Global Positioning System (GPS) (521R) NAVSSI (1R009)

February-00

MODELS OF SYSTEMS AFFECTED:

All models of ships will have NAVSTAR GPS

DESCRIPTION/JUSTIFICATION:

The NAVSTAR Global Positioning System (GPS) is a joint Service Program which will provide advance satellite positioning. The ultimate system will consist of a constellation of satellites, control/tracking network, and user equipment installed aboard a variety of airborne, shipborne and land-based platforms. With the advent of OTH-T, it is imperative that all ships continuously know their geographic position to correlate sensor data and prevent escort ships from becoming unwilling targets. To meet this need, the Navigation Sensor System Interface (NAVSSI) program was initiated. NAVSSI will distribute position, velocity, time and almanac data to onboard command and control and combat systems in real time with GPS as the primary source of navigation data.

DEVELOPMENT STATUS/MAJOR DEVELOPMENT MILESTONES:

NAVSTAR GPS reached full rate production 30 Jan 92. NAVSSI received MSIIIA in May 94, Full Production Approval received in May 1995.

PUC K0001: AFRTS Program - AFRTS shipboard entertainmentsystems provide improved quality of life at sea and at overseas shore bases. These systems contribute significantly to the habitability of Navy ships by providing and distributing news, command information, training, and entertainment programming using the latest technology available. These systems improve morale, combat effectiveness and retention rates of deployed personnel. All AFRTS systems use Commercial-Off-the-Shelf(COTS) equipment. Naval Media Center (NAVMEDIACEN) Fleet Support Detachments (FSDs) are the Installing agents for these systems. Each system installation is made based on ship availability. The AFRTS program consists of the following systems:

- (a) SITE 2000/500 - This SITE system is designed for aircraft carriers (CV/CVN). It is used to playback videocassettes and compact discs distributed by AFRTS and NMPS over four channels on a cable distribution system. System also allows for the production of training tapes and command information programs. Systems are designed to interface with pierside cable systems where available. Requires manpower of two dedicated technicians and three operators. SITE 2000/500 is the next generation of the SITE 501 project. A total of seven systems required at an estimated unit cost of \$378K. One unit will be procured in FY 01. Each system requires five to ten months lead time to procure and install. SITE 2000 includes Television Direct-to-Sailor (TV-DTS) equipment upgrades.
- (b) SITE 2000/400 - This SITE system is designed for large amphibious and auxiliary ship classes (AOE/LHA/LHD/LPD/LSD). Same as SITE 2000/500 system, with the exception of studio production capability and lesser editing capability. Requires manpower of one dedicated technician and operator. Total of 33 systems required at an estimated unit cost of \$209K. Four units will be procured in FY 01. Each system requires four to eight months lead time to be procured and installed. SITE 2000 includes TV-DTS equipment upgrades.
- (c) SITE 2000/300 - This SITE system is designed for smaller combatants ship classes (CG/DD/DDG/FFG). This system is used primarily for playback of AFRTS and NMPS cassettes over two channels. Capable of producing simple local programs for training and command information. Requires manpower of one dedicated technician who also serves as operator. Total of 124 systems required at an estimated unit cost of \$85K. Fifteen units will be procured in FY 01. Each system requires four to eight months lead time to procure and install. SITE 2000 includes TV-DTS equipment upgrades.
- (d) SITE 2000/200 - Compact system used to playback AFRTS and NMPS cassettes over two channels on submarines (SSN/SSBN). Capable of making simple recordings for training and command information. Requires no dedicated technician or operator. A total of 54 systems are required at an estimated unit cost of \$58K. Seven units will be procured in FY 01. Each system requires four to eight months lead time to procure and install.

APPROPRIATION/BUDGET ACTIVITY

OTHER PROCUREMENT, NAVY/BA-2 Communications and Electronic Equipment

P-1 ITEM NOMENCLATURE

Armed Forces Radio and Television/BLI: 266600 - Subhead 82K0

(e) SAES - Shipboard Audio Entertainment System (SAES) upgrade is an assemblage of COTS items providing a standard/reliable means to play audio program material distributed by the AFRTS. A total of 84 systems are required at an estimated unit cost of \$31K. In prior years 77 units have been procured. In FY 00 4 units will be procured, leaving 3 units to be procured in FY 01. Each system requires three to eight months lead time to procure and install. In FY02 the SAES system will be integrated into the SITE system. The following ship classes require the total of 84 SAES Units: CG, DD, DDG, FFG.

(f) IRFDS - Integrated Radio Frequency Distribution System (IRFDS) provides ship-wide transmission of command information, training and entertainment television programming. The IRFDS receives television signals from the ship's SITE system or antenna and distributes the signals to all installed TV receivers. This system replaces the unsupportable Circuit 14TV. IRFDS is a COTS system. IRFDS procurement also includes the purchase of equipment to integrate all television displays onto one distribution system. Total of 106 systems are required. An average FY 01 unit cost to engineer, furnish and install is \$270K. Cost per unit ranges from \$195K for smaller ships to \$530K for carriers. The unit costs are based on "first-in-the-class" estimates, follow-on ships in the same class will have a lower unit cost. In prior years 17 units have been procured. Two units will be procured in FY 00 and four units will be procured in FY 01. Each system requires a three to ten months lead time to be procured and installed. The following ship classes require the total of 106 IRFDS units: CG, CV/CVN, DD, DDG, FFG.

PUC KOINS: This funding supports the installation of SITE, SAES, and IRFDS systems onboard Navy ships.

PUC K0002: SPAWAR Program - Television Direct-to-Sailors (TV-DTS) will provide a receive-only television capability to 181 ships in the Fleet. This capability will feature two full-time news and entertainment television channels as well as two stereo audio music channels, one monographic audio radio news and sports channel, one 128kbps data channel, and an electronic program guide. AFRTS will provide the programming. Satellite transponders, ground-based earth stations and leases for terrestrial connectivity will be provided by SPAWAR (via O&MN funding). Each ship will be outfitted with COTS 1.3 meter C-band satellite stabilized antenna terminal for reception of the television signal. Funds were placed on contract for the procurement of hardware with 122 systems bought in FY 98 and 5 systems in FY 99. (Procurement of five systems is the contract minimum in FY99.) To meet the total inventory objective of 181, procurement of 4 units and installation of 26 units will be accomplished in FY00; procurement of 14 units and installation of 28 units will be accomplished in FY01; procurement of 36 units and installation of 30 units will be accomplished in FY02. Installations are accomplished by Alteration Installation Teams (AIT).

SPARES COST (In Millions)												\$0.0

PROGRAM DESCRIPTION/JUSTIFICATION:

Funding in this P-1 line provides electronics equipment that will be installed aboard ships and in the TRIDENT Training Facility (TRITRAFAC) and the TRIDENT Refit Facility (TRIREFFAC) located at Naval Submarine Bases (Bangor, WA and Kings Bay, GA) and other TRIDENT shore facilities. The TRIDENT program has shifted from its modernization phase to a program designed to maintain TRIDENT's capability to perform its defined mission. This will be accomplished via the Obsolete Equipment Replacement (OER) Program.

OBSOLETE EQUIPMENT REPLACEMENT (OER) - Replacement of existing hardware/software that, though functional, has become operationally obsolete, is no longer in production or supportable with spare parts, has a high failure rate, or is no longer cost effective to maintain. OER hardware/software changes would be expected to provide significant cost savings in reduced maintenance costs and would use Commercial-Off-The-Shelf (COTS) technology where ever possible as long as all technical requirements are met.

INSTALLATION (ELECTRONICS) - Provides funding for electronic equipment installation resulting from the OER Program.

	Trident Sonar (Replaces AN/BQQ-5E(V)// AN/BQQ-6 Towed Array Processing)					TYPE MODIFICATION: Obsolete Equipment Replacement					Acoustic Rapid COTS Insertion (ARCI) Phase I/II Multi-Purpose Processor (MPP)									

DESCRIPTION/JUSTIFICATION:

Acoustic Rapid COTS Insertion (ARCI) (Phase I/II) Multi Purpose Processor (MPP) replaces obsolete AN/BQQ5E(V)//AN/BQQ-6 Sonar Towed and Hull array processing equipment with a COTS based open system architecture with increased acoustic advantage.

<p>PROGRAM COVERAGE/JUSTIFICATION FOR BUDGET YEAR REQUIREMENTS: Joint Simulation System-Maritime (JSIMS-M). The mission of JSIMS is provide a readily available, operationally valid synthetic environment for the Commanders-in-Chief (CINCs) their components, other Joint organizations and the Services to: jointly train, educate, develop doctrine and tactics, formulate and assess operational plans, assess warfighting situations, define operational requirements, and provide operational inputs to the acquisition process. All services' Executive Agents (EAs) and Development (DAs) are required to contribute to the initial population of the JSIMS architecture with facilities, services and tools to meet an Initial Operational Capability (IOC) for the Joint Task Force (JTF) training in FY 2002. In June 1994 the Services and Director, Joint Program Office, signed a Memorandum of Agreement (MOA) to establish JSIMS, a critical next-generation Modeling and Simulation (M&S) system. The long term goal of the agreement is to integrate the range of missions of the Armed Forces within a common framework. That framework provides a balanced melding of live, virtual and constructive M&S representations, with Command, Control, Communications, Computers and Intelligence (C4I) fully supported, and interfaces using real-world equipment. As the Maritime Warfare EA, OPNAV (N7), on 2 Oct 98, reassigned JSIMS-M DA responsibility from NAVSEA to SPAWAR. The objective of the JSIMS-M Program is to train naval staffs at all levels command, in all warfare areas, including joint and service-specific training. JSIMS-M is responsible for developing the Maritime Mission Space Objects for the JSIMS Program, as well as selected portions of the core infrastructure and services to be determined when the Joint Object Model is partitioned. Supported sites are the Naval War College, Tactical Training Groups Atlantic and Pacific, and the Expeditionary Warfare Training Groups Atlantic and Pacific. This BLI procures the equipment on which the JSIMS simulations will run in support of fleetwide training.</p> <p>Enhanced Naval Warfare Gaming System (ENWGS). ENWGS is the only Navy-recognized naval wargaming system. ENWGS supports wargaming for CINCLANTFLT, CINCPACFLT, Fleet Commanders, the Naval War College, and tactical training courses conducted at the Tactical Training Groups (Atlantic and Pacific) and the Expeditionary Warfare Training Groups (Atlantic and Pacific). ENWGS tests the Battle Group's Operational Orders and directives, providing the essential supplement to at-sea operations prior to sea.</p> <p>FY99 budget procurement: ENWGS--Procured essential peripheral and host hardware to fully equip each host configuration. These items included HP J2240 Host Hardware and additional local/wide area network configuration items.</p> <p>FY00 budget procurement: JSIMS--Procure essential systems engineering support and hardware to start equipping first JSIMS site at Tactical Training Group Atlantic and to provide security hardware suite.</p> <p>FY01 budget procurement: JSIMS--Procure essential systems engineering support and hardware to complete JSIMS sites at Tactical Training Group Atlantic and Expeditionary Warfare Training Group Atlantic.</p>

QUANTITY				N/A								
COST (In Millions)				\$26.8	\$51.1	\$21.4	\$48.1	\$30.4	\$28.6	\$32.1		\$238.5
SPARES COST (In Millions)												\$0.0

The equipment procured under the Other Training Equipment for NAVSEA line supports various types of Communication and Electronic training requirements: Procures sustaining and training equipment/systems, training aids and logistic support equipment to support Fleet training requirements. Representative training systems include, but are not limited to: Integrated Undersea Surveillance Systems (IUSS) On Board Trainers (OBT), Computer Improved Instructors Training Aid (CIITA), Acoustic Analysis Trainers, Ship Characteristic Demonstrators/Models, Ship Handling System, the Virtual Environment Submarine (VESUB), Submarine Piloting and Navigation Trainer (SPAN), and the Authorizing Instructional Material (AIM) System. Supports training support equipment requirements developed by the Chief of Naval Education and Training (CNET), and approved by CNO.

(MB032) SUSTAINING TECHNICAL TRAINING EQUIPMENT

Funds procure Communication and Electronic Technical Training Equipment (TTE) identified by the Chief of Naval Education and Training (CNET) and the Surface Warfare Training Requirements Review (SWTRR) process, as approved by CNO. This TTE sustains a better quality of training and/or replaces equipment beyond economical repair.

(MB040) BATTLE FORCE TACTICAL TRAINING (BFTT)

Funds will procure equipment/systems to support the Battle Force Tactical Training (BFTT) Program, which will provide the capability for coordinated shipboard combat system team and Battle Group/Battle Force (BG/BF) training in port. BFTT will provide realistic joint warfare training across the spectrum of armed conflict, realistic unit level team training in all warfare areas, a means to link ships together which are in different homeports for coordinated training, external stimulation of shipboard training systems and simulation of non-shipboard forces such as friendly, neutral, and enemy ships, aircraft and submarines. BFTT will use a distributed architecture in order to integrate existing on-board/embedded trainers, and will utilize Distributed Interactive Simulation (DIS) protocols to provide Battle Group/Force Commanders with the ability to conduct coordinated, realistic, high stress, interactive combat system training.

In FY 99 the projected BFTT Baseline Procurement consists of one full BFTT System for (6) DDG 51 Class, (2) CG 47 Class and (3) LSD 41 Class Ships, Production Integration, Integrated Logistics Support (ILS)/Spares, 8 Rehoused ACTS, 25 Shipboard RF/IF Stimulators, and CSTS/BFTT Systems Integration Hardware.

In FY 00 the projected Baseline Procurement consists of one full BFTT system for (1) CVN 68 Class, (3) CG 47 Class, (2) LSD 41 Class, (1) LHD 1 Class, and (5) DDG 51 Class ships, Production Integration, ILS/Spares, (8) Rehoused ACTS, (30) Shipboard RF/IF Stimulators, (10) BFTT Electronic Warfare Trainers (BEWTs), CSTS/BFTT System Integration Hardware, (4) BFTT ATC Stimulators, and (42) BFTT EW Trainers.

**BUDGET ITEM JUSTIFICATION SHEET
P-40 CONTINUATION**

DATE:

FEBRUARY 2000

APPROPRIATION/BUDGET ACTIVITY

OTHER PROCUREMENT, NAVY/BA-2 Communications and Electronic Equipment

P-1 ITEM NOMENCLATURE

OTHER TRAINING EQUIPMENT/BLI: 2762

In FY 01 the projected Baseline Procurement consists of one full BFTT system for (1) LHD 1 Class, (3) CG 47 Class, and (2) DDG 51 Class ships, Production Integration, ILS/Spares, (13) Shipboard RF/IF Stimulators, (10) BFTT Electronic Warfare Trainers (BEWTs), and CSTS/BFTT System Integration Hardware.

In FY 02 the projected Baseline Procurement consists of one full BFTT system for (2) CV/CVN Class, (3) CG 47 Class, (2) DD 963 Class, (1) LHD Class, (1) LHA Class, and (6) DDG 51 Class ships, Production Integration, ILS/Spares, (32) Shipboard RF/IF Stimulators, (20) BFTT Electronic Warfare Trainers (BEWTs), and CSTS/BFTT System Integration Hardware.

(MB041) SUBMARINE SYNTHETIC WARFARE/COMBINED TEAM TRAINER MODE (CTTM)/ELECTRONIC CLASSROOMS

This line procures the submarine-unique requirements to support the Synthetic Warfare (SW), Combined Team Trainer Mode (CTTM), and Electronic Classroom (EC) Systems. FY99, FY00 and FY01 funds procure additional capability for the submarine training sites to support Synthetic Warfare, CTTM, and EC requirements identified by TYCOM.

(MB050) SUBMARINE SONAR EMPLOYMENT TRAINER (SET)

The SET provides acoustic operator employment training for submarine sonar systems. It uses entirely commercial components to contain contact and environment models, simulations of the sensors and signal processing, simulated operator consoles, and an instructional subsystem including an instructor's console. FY00 procures a SET system for the Naval Submarine School at Groton, CT.

The SET will support Sensor/Combat Systems programs of all currently deployed submarine classes, and will be a critical part of the training plans of the new SSN, Virginia, class in the future. The SET will be an essential component of an emerging shore based training system that will support the projected technology in the Fleet systems that are designed to meet current and future threats: the Acoustics, Rapid Commercial-Off-The-Shelf (COTS) Insertion (A-RCI) and C3I. The design concept for SET is based on the widely recognized and proven successful Interactive Multisensor Acoustic Trainer (IMAT) visualization and simulation technologies.

The SET will be part of the solution to a deficiency in operator competence and data recognition due to a lack of employment training by its use of 3-D graphics, animation, audio, and scientific visualization methods to illustrate highly complex displays and concepts of oceanographic physics.

The demands of curriculum and student throughput at the primary submarine training site at NavSubScol, Groton dictates the number and configuration of trainers provided by the N87 budgets, including the SET.

The estimates include competitive sourcing savings associated with consolidation of production support contracting efforts.

DESCRIPTION:												
<p>Marine Air Traffic Control & Landing System (MATCAL) is a fully automated all weather expeditionary terminal Air Traffic Control System that provides arrival/ departure and enroute surveillance control, automated precision approach and landing control, or Ground Controlled Approach (GCA). MATCAL satisfies the operational requirements set forth by Specific Operational Requirements (SOR) 34-22 of 12 July 1973. MATCAL is also comprised of other visual and navigational aids including Pulse Coded Microwave Landing Systems (SOR 34-26 of 30 APRT5), ATC systems and ancillary equipment. ORD 341-88-93 of 1 Sep 93 also applies.</p> <p>MATCAL, with other Marine Air Command and Control Systems and federal agencies, provides the ability to project air combat power in the Amphibious Operations Area (AOA) without regard to weather. Air traffic control and landing automation reduces air traffic controllers' traffic handling and management time, allowing more time for mission response and task accomplishment. It supports a required increase in aircraft sortie rates and contributes to extended time on target. The system provides for integration of Air Traffic Control (ATC) into the total Marine Air Command and Control System (MACCS).</p> <p>MATCAL has three primary subsystems: (1) Air Traffic Control Subsystem (ATCS) consisting of AN/TPS-73 Airport Surveillance Radar and various peripheral equipment; (2) All-Weather Landing Subsystem (ALS) consisting of an AN/TPN-22 Precision Approach Landing Radar, AN/UYK-44 computer and peripheral equipment; and (3) the Control and Communications Subsystem (CCS) (AN/TSQ-131(V)) with a Communications Control Group (CCG), radios, computer software, multi mode displays and peripherals. Other Fleet Marine Force ATC equipment supported by the funding line MATCAL are the AN/TSQ-120 Tower, AN/TRN-44 TACAN, AN/TPN-30 Marine Remote Area Approach & Landing Set (MRAALS), the AN/TSQ-216 Remote Landing Site Tower (RLST), the AN/TSM-170 Maintenance Shelters and various support items. Total requirement is for 17 subsystems: 12 for the Marine Air Traffic Control Detachments (MATCD); 1 for the Aviation Ground Support Element at 29 Palms, CA; 1 for operational contingencies/ISEA Test Bed at San Diego, CA; 2 for the Naval Air Technical Training Center (NATTC) in Pensacola, FL; and 1 for NAWCAD Landing Systems Test Facility, Patuxent River, MD.</p> <p>An initiative has been approved to transition the current MATCAL to the Next Generation Marine ATC System, referred to as the Air Surveillance and Precision Approach Radar Control System (ASPARCS) (ORD 518-88-99 of 12 May 99). ASPARCS will consist of an Air Surveillance Radar which will replace the AN/TPS-73, a Precision Approach Radar which will replace the AN/TPN-22, and an Operations/Communications Subsystem which will replace the AN/TSQ-131. ASPARCS will provide greater mobility, transportability, reliability, maintainability, and interoperability with Marine Corps/Navy Command and Control Systems than the current MATCAL. Total requirement for ASPARCS is 11 units: 8 for the Marine Air Traffic Control Detachments (MATCD's), 2 for the Naval Air Technical Training Center (NATTC) in Pensacola, FL, and 1 for the Depot (TBD).</p> <p>FY98 funding procured 25 MATCAL Radio Upgrades, 10 AN/UYQ-42 Upgrades, various maintainability/reliability improvements and related installation. FY99 funding procured 38 MATCAL Radio Upgrades, 6 RLSTs, maintainability/reliability improvements, and related installation. FY00 funding procures 77 MATCAL Radio Upgrades, 6 RLSTs, 36 Manpack Radios, various maintainability/reliability improvements and related installation. FY01 funding procures 44 MATCAL Radio Upgrades, 12 Manpack Radios, various maintainability/reliability improvements and related installation.</p> <p>INSTALLATION AGENT: SPAWARSCEN, SD Facilities that are to receive the equipment: Marine Corps air traffic control facilities, expeditionary airfields, and remote landing sites.</p>

<p>DESCRIPTION:</p> <p>Shipboard Air Traffic Control (SATC) systems are responsible for safe and expeditious control of air traffic within 50 NM of a ship. SATC systems include the air traffic surveillance radar, AN/SPN-43, and the air traffic central tracking and control system which has two major configurations: Carrier Air Traffic Control Center-Direct Altitude and Identity Readout (CATCC-DAIR) and Amphibious Air Traffic Control-Direct Altitude and Identity Readout (AATC-DAIR). Both DAIR systems use AN/SPN-43 and Identification Friend or Foe (IFF) inputs to track and control aircraft. Obsolescence problems are being addressed through various upgrades. The major upgrades include AN/SPN-43C, CATCC-to-AATC field change, and AN/TPX-42 display upgrade.</p> <p>Funding in FY 1998 through FY 2001 provides for procurement and installation of the following:</p> <p>FY 1998 funded the installation of SATC modification kits and AN/SPN-43C upgrades.</p> <p>FY 1999 funded the procurement of one CATCC-to-AATC field change kits, one AN/TPX-42(V)14, one AN/SPN-43C upgrade, and various SATC modification kits. It also funded the installation of one CATCC-to-AATC field change kit, one AN/TPX-42(V)14, and one AN/SPN-43C upgrade.</p> <p>FY 2000 funded the procurement of two CATCC-to-AATC field change kits and various SATC modification kits. It also funds the installation of one CATCC-to-AATC field change and one AN/SPN-43C upgrade.</p> <p>FY 2001 funds the procurement of two CATCC-to-AATC field change kits and various SATC modification kits. It also funds the installation of one CATCC-to-AATC field change and one AN/TPX-42(V)14.</p> <p>Installing Agent: Shipyards and Alteration Installation Teams When installation to be made: ROH/SRA/RAV Ships or facilities to receive the equipment: CV/CVNs, LHD/LHAs, Software Support Activity (NAWCAD, St Inigoes), Integrated Combat System Test Facility (San Diego), Landing Systems Test Facility (NAWCAD, Patuxent River), and training sites.</p>

The total quantity reflects the inventory objective for this item.

FY94 and prior unit cost is lower because these units did not include the ADS upgrade.

The FY99 unit cost is higher because in FY97 (and prior) assets from decommissioned ships were used, but no additional assets will be available for the FY99 through FY05 units.

Total quantity of 16 represents the OPN inventory objective for this item. An additional unit has been purchased with SCN funds.

D. REMARKS											
1/ DOD Advanced Automation System (DAAS) unit costs vary per site. P-5 page unit cost is only average of sites each year. Delivery dates are for Navy DAAS.											
2/ Tower Automation is a Government propriety system and unit costs vary per site.											

CLASSIFICATION: **UNCLASSIFIED**

P3A **INDIVIDUAL MODIFICATION**

MODELS OF SYSTEM AFFECTED: NAS TYPE MODIFICATION: SAFETY MODIFICATION TITLE: DOD ADVANCED AUTOMATION SYSTEMS (CB010)

DESCRIPTION/JUSTIFICATION:
 The DOD Advanced Automation System (DAAS) is being developed as part of a joint DOD/FAA program to modernize and standardize Air Traffic Control equipment in the National Air Traffic Control System. The systems will be installed at Navy Air Traffic Control facilities to replace aging, obsolete equipment and comply with the joint DOD/FAA modernization program agreements. DAAS provides for processors and displays for tower and approach controls.

(In Millions)	\$98.0		\$7.2	\$7.2	\$6.7	\$7.5	\$7.6	\$7.8	\$8.0	CONT	CONT
DESCRIPTION:											
<p>The Naval Air Systems Command (NAVAIR) has an established requirement to provide shore based Air Traffic Control (ATC) terminal facilities and equipment, many of which interface through automated means with the Federal Aviation Administration (FAA), which is required in joint efforts to efficiently and safely monitor and direct military and commercial air traffic in national and international air space. Additionally, NAVAIR has material support responsibility for Air Navigation Aid Systems, Tactical Communications, Mobile ATC Equipment, Special Instrumentation Systems, and Ancillary Equipment used at Navy and Marine Corps Aviation Shore activities in the continental United States and overseas.</p> <p>(1) Communications Systems Upgrade Program - This program procures and installs advanced, commercial state-of-the-art, ATC voice switching and recording/reproduction equipment which will be used to replace aging AN/FSA-52/58 and OJ-314 voice communication switching systems and the RD-379/379A/390 and RP-214 recorder/reproducers. Existing systems and equipment use 1950's toggle switch & 1960's push-button analog technology that is becoming logistically unsupportable.</p> <p>(2) AN/FSC-119(V) Integrated Voice Communication Switching System (IVCSS) - Advanced commercial-digital technology voice switching equipment which is primarily being used to replace existing AN/FSA-52 Voice Communication Switching Systems. The existing equipment uses 1950's toggle switch analog technology that is becoming logistically unsupportable.</p> <p>(3) UHF/VHF Radio Replacement Program - This program modernizes aging Navy and Marine Corps UHF/VHF transmitter and receiver equipment. This equipment is the central core of all critical Air Traffic Control communications. This program is replacing the aging AN/GRT-21/22 VHF/UHF (10 watt) transmitters, AM-6154/GRT-21 & AM-6155/GRT-22 VHF/UHF (50 watt) Linear Power Amplifiers, and AN/GRR-23/24 VHF/UHF receivers that are becoming logistically unsupportable.</p> <p>(4) Engineering Change Proposal (ECP)/Operational Capability Improvement Request (OCIR) modernization: The ECP/OCIR program provides for the procurement, and or modification, of critically needed communications, radar, displays, data processors, and other electronic systems/equipment needed at Navy/Marine Corps Air Traffic Control facilities worldwide. ECP/OCIR procurements replace and modernize costly-to-maintain systems and equipment in order to increase Air Traffic Control efficiency and safety, improve affordable readiness, and reduce total ownership costs.</p> <p>FY 98 through FY 01 funds are presently planned to procure and or install:</p> <p>FY 98: 3 UHF/VHF Antenna Upgrades (MR404); 139 UHF/VHF Radio Replacements (MR407); 4 Communication System Upgrades (MR408); and various OCIRs (MR069) for approved sites.</p> <p>FY 99: 42 UHF/VHF Radio Replacements (MR407); 6 Communication System Upgrades (MR408); and various OCIRs (MR069) for approved sites.</p>

MODELS OF SYSTEM AFFECTED: AIR STATION TYPE MODIFICATION: CAPABILITY IMPROVEMENT MODIFICATION TITLE: ECP/OCIR SUMMARY (MR069)

DESCRIPTION/JUSTIFICATION:

The ECP/OCIR program provides for the procurement, and or modification, of critically needed communications, radar, displays, data processors, and other electronic systems/equipment needed at Navy/Marine Corps Air Traffic Control facilities worldwide. ECP/OCIR procurements replace and modernize costly-to- maintain systems and equipments in order to increase Air Traffic Control efficiency and safety, improve affordable readiness, and reduce total ownership costs.

CLASSIFICATION: UNCLASSIFIED

P3A **INDIVIDUAL MODIFICATION**

MODELS OF SYSTEM AFFECTED: AIR STATION TYPE MODIFICATION: MODERNIZATION MODIFICATION TITLE: UHF/VHF RADIO REPLACEMENT (MR407)

DESCRIPTION/JUSTIFICATION:
 UHF/VHF Radio Replacement Program - This program modernizes aging Navy and Marine Corps UHF/VHF transmitter and receiver equipment that is the central core of all critical Air Traffic Control communications. This program is procuring NDI's previously developed by Motorola for the FAA as form, fit, and function replacements of the aging AN/GRT-21/22 VHF/UHF (10 watt) transmitters, AM-6154/GRT-21 & AM-6155/GRT-22 VHF/UHF (50 watt) Linear Power Amplifiers, and AN/GRR-23/24 VHF/UHF receivers that are the same as those used by the Navy and Marine Corps. The existing radios use 1960's analog technology with the LPAs still using vacuum tubes and other out-of-production components and cause numerous casualty reports (CASREPs) and logistics supportability problems due to equipment and parts obsolescence. [The radio quantities reflect the inventory objective for the total of the six different types of radios being procured with the various costs averaged and provided for budgeting and planning purposes. The actual costs and quantities of the radios procured in the year of execution will vary based on the mix/costs of radio types required/procured for the air stations to have their old radios replaced and will be determined/controlled/limited by funding availability.]

P3A **INDIVIDUAL MODIFICATION**
 MODELS OF SYSTEM AFFECTED: AIR STATION TYPE MODIFICATION: MODERNIZATION MODIFICATION TITLE: COMMUNICATION SYSTEM UPGRADE (MR408)

DESCRIPTION/JUSTIFICATION:
 Communications Systems Upgrade - Advanced commercial state-of-the-art ATC voice switching and recording/reproduction equipment which will be used to replace existing AN/FSA-52/58 and OJ-314 voice communications switching systems and the RD-379/379A/390 and RP-214 recorder/reproducers. Existing systems and equipment use 1950's toggle switch & 1960's push-button analog technology, are no longer in production, and causing numerous casualty reports (CASREPs) and logistics supportability problems due to system and parts obsolescence. The voice switching system selected for use by the Navy is a Non-Developmental Item, developed by the FAA via a, full and open competition, contract which was awarded by the FAA to Denro, Inc. The recorder/reproducer system selected for use by the Navy is a commercial item produced by Advanced Integrated Recorders, Inc. and are be obtained through a contract awarded to AIR, Inc. on 7/31/98 by our coordinating field activity, SPAWAR Charleston, SC. The existing equipment is obsolete and becoming logistically unsupportable. Note - New recorder/reproducers will be procured and installed at all Navy/Marine Corps Air Stations with up to two new recorder/reproducers systems needed per each communications system upgrade shown below.

<p>DESCRIPTION:</p> <p>The Naval Air Systems Command (NAVAIR) has an established requirement to provide shore based Air Traffic Control (ATC) terminal facilities and equipment, many of which interface through automated means with the Federal Aviation Administration (FAA), which is required in joint efforts to efficiently and safely monitor and direct military and commercial air traffic in national and international air space. Additionally, NAVAIR has material support responsibility for Air Navigation Aid Systems, Tactical Communications, Mobile ATC Equipment, Special Instrumentation Systems, and Ancillary Equipment used for ATC&LS by the Navy and Marine Corps. This Landing Systems (LS) 42X1 program, in conjunction with the other three programs (Air Station Support Equipment 42MR, Fleet Area Control and Surveillance Facility (FACSFAC) 42TT, and the National Airspace System Modernization 42CB) which make up program element 0204696N, provide the four pillars by which NAVAIR supports and meets established requirements to modernize and ensure reliable, safe and effective operations of ATC&LS used at Navy and Marine Corps air stations and ATC facilities worldwide.</p> <p>This Landing Systems (LS) budget provides funding to modernize and ensure the reliability and safety of existing Precision Approach Radars (PAR), Tactical Air Navigation (TACAN) systems, Instrument Landing Systems (ILS), and other aircraft navigation aids used by the Navy and Marine Corps. This program also ensures that all interservice interoperability requirements identified in the National Airspace System Plan (NASP), the Federal Radio Navigation Plan (FRNP), and the Joint Chiefs of Staff (JCS) master navigation plan are fulfilled.</p> <p>Funding in FY98 through FY01 provides procurement of the following:</p> <p>FY 98 provides funding to procure 10 AN/FPN-63 Environmental Shelters and various ECPs/OCIRs as required for approved sites.</p> <p>FY 99 provides funding to procure 10 AN/FPN-63 Environmental Shelters, 1 commercial Instrument Landing System, and various ECPs/OCIRs as required for approved sites.</p> <p>FY 00 provides funding to procure 5 AN/FPN-63 Environmental Shelters and various ECPs/OCIRs as required for approved sites.</p> <p>FY 01 provides funding to procure 1 commercial Instrument Landing System and various ECPs/OCIRs as required for approved sites.</p>

Bankruptcy of original contractor caused delays in procurement and installation of FY97 assets.

P-3A

CLASSIFICATION: **UNCLASSIFIED**

P3A **INDIVIDUAL MODIFICATION**

MODELS OF SYSTEM AFFECTED: Landing Systems TYPE MODIFICATION: Operational Capability Improvement MODIFICATION TITLE: Instrument Landing System (X1102)

DESCRIPTION/JUSTIFICATION:

Procurement and installation costs shown are for Wilcox Mark 1F Instrument Landing Systems (FY 97 & Prior years) and Commercial Non-Developmental Items (NDIs) Instrument Landing Systems (FY 99 & after). Systems being procured and installed FY 99 and after are the result of emerging requirements that have been identified and approved via the OCIR process. After installation, all ILS equipment is flight tested, approved and certified by the Federal Aviation Administration (FAA) for operational use by civil and DoD aviation communities.

<p>DESCRIPTION:</p> <p>Fleet Area Control and Surveillance Facilities (FACSFAC) are established to provide multi-mission Air Traffic Control and training area management services to the fleet. This service includes scheduling of surface, subsurface, and air operations in off-shore operating areas, surveillance control of air operations and related training evolutions such as Ground Control Intercept and Air Combat Maneuvers. The basic purpose of FACSFAC is to prevent mid-air collisions between military and civilian aircraft and to be responsible for the management and protection of Navy training airspace.</p> <p>Eight FACSFAC system supported sites have been established as follows: FACSFAC Virginia Capes, FACSFAC Jacksonville, FACSFAC Caribbean, FACSFAC Pensacola, FACSFAC San Diego, FACSFAC Pearl Harbor, NAS Fallon and NAWCAD St. Inigoes. In order to accommodate mission expansion and maintain a required interoperability with the FAA National Air Traffic Control System, FACSFACs must be periodically provided with new or upgraded capabilities.</p> <p>Funding in FY 98 through FY 01 provides for procurement and installation of the following:</p> <p>FY 98 provided funding to: procure 8 Radar Beacon Digitizer Replacements (TT175); procure 22 Display Replacements (TT176); procure miscellaneous enhancements for selected sites (OCIRs/ECPs) (TT145).</p> <p>FY 99 provides funding to: procure 8 Display Replacements (TT176); procure miscellaneous enhancements for selected sites (OCIRs/ECPs) (TT145).</p> <p>FY 00 provides funding to: procure 17 Display Replacements (TT176); procure 2 FACTS 3200 Radar Input Capacity Upgrades (TT177); procure miscellaneous enhancements for selected sites (OCIRs/ECPs) (TT145).</p> <p>FY 01 provides funding to: procure 12 Display Replacements (TT176); procure 2 FACTS 3200 Radar Input Capacity Upgrades (TT177); procure miscellaneous enhancements for selected sites (OCIRs/ECPs) (TT145).</p> <p>Items are usually procured in single inclusive lots to ensure commonality for logistics support and for component interchangeability. This is especially important, since these are Non-development Items (NDI) with limited model production runs. Economic benefits are also realized by single lot purchase.</p>

COST (In Millions)	\$110.4			\$17.5	\$9.2	\$14.3	\$19.1	\$24.6	\$26.7	\$25.1	Cont	Cont
<p>DESCRIPTION: The Identification Systems program funds the following procurements: AN/UPX-37 Digital Interrogator (DI), Digital Transponder (DT), Combat Information Center (CIC), AN/UPX-29(V) Improvements, AN/UPM-155 Radar Test Set, and AN/UPX-34 Shipboard Advanced Radar Target Identification Systems (SARTIS)</p> <p>The Air Traffic Control System, Identification Friend or Foe, MK XII System (AIMS) is a DOD directed tri-service program designated to provide a universal air traffic control radar beacon system compatible with the National Airspace Program. It provides a secure identification system for military use on all major combatant ships, selected auxiliaries, patrol craft, and selected Coast Guard ships by allowing all friendly forces to identify each other and neutral forces. The Air Traffic Control Radar System supports several missions such as Anti-Airwarfare, Aerial Bombardment, and Naval Attack.</p> <p>The purpose of the AN/UPX-37 Digital Interrogator (DI), Common Transponder (CXP), and Combat Information Center (CIC) is to replace 20-25 year old equipment with a Reliability and Maintenance enhancement through the use of COTS/NDI form/fit/function equipment. These new systems will be enhanced with state-of-the-art technology and open systems architecture, and will be purchased with existing MK XII Improvements funding. The DI, CXP, and CIC systems have been included in the POM, and changes in FY99 realign funding to support the new systems.</p> <p>The AN/UPX-29(V) Improvements program provides field changes to the AN/UPX-29(V) systems for improved reliability and maintenance.</p> <p>The AN/UPX-24(V) Field Change 5 provides open systems architecture for increased expansion capability. The AN/UPX-24(V) Mode S provides improved Shipboard Combat Identification and increases the probability of identification of neutral aircraft.</p> <p>The AN/UPM-155 Radar Test Set replaces the aging AN/UPM-136 and the AN/UPM-137A test sets as the prime support equipment for the MK-XII system in all services. It is intended to give the Fleet modern equipment that will allow more accurate alignments in less time, to increase the system's operational availability and reduce down time.</p> <p>The purpose of the SARTIS is to provide non-cooperative target recognition of hostile and neutral aircraft as well as identifying cooperative military aircraft for air defense.</p> <p>FY99 funds the procurement of 60 AN/UPX-37 Digital Interrogators in FY99 and 40 AN/UPX-37 Digital Interrogators in FY00. FY00 funds the procurement of 10 CommonTransponders. FY01 funds the procurement of 70 AN/UPX-37 Digital Interrogators and 36 CommonTransponders.</p> <p>Installing Agent: Shipyard, Alteration Teams (AIT). When installation to be made: ROH/RAV/SRA. Type Ship to receive equipment: An IFF system is on every ship in the fleet. SARTIS will be installed on CG-47 class.</p>

P3A **INDIVIDUAL MODIFICATION**

MODELS OF SYSTEM AFFECTED: AN/UPX-27 TYPE MODIFICATION: Reliability MODIFICATION TITLE: AN/UPX-37 DIGITAL INTERROGATOR (MT031)

DESCRIPTION/JUSTIFICATION:

Current AN/UPX-27 is late 60's technology and no longer meets operational availability requirements due to use beyond its intended life cycle. High cost of ownership due to parts obsolescence, frequent labor intensive alignments and poor reliability continue to be problems associated with the current system. Further, the current system suffers upgrade integration problems due to its dated architecture and offers no growth capabilities. A more reliable system with the same functionality is required.

DEVELOPMENT STATUS/MAJOR DEVELOPMENT MILESTONES: Milestone III decision June 1998.

MODELS OF SYSTEM AFFECTED: IDENTIFICATION SYSTEMS TYPE MODIFICATION: Maintenance/Reliability MODIFICATION TITLE: MK XII COMMON TRANSPONDER (MT032)

Current MK-XII transponder systems no longer meet operational Reliability and Maintainability (R&M) requirements due to use beyond their intended life cycle and suffer high cost of ownership due to parts obsolescence. Current surface ship MK-XII transponders will be replaced to continue incremental digital and R&M upgrades to the MK-XII IFF System. The common transponder will use an open systems architecture to allow future growth as requirements emerge.

JUSTIFICATION OF BUDGET YEAR REQUIREMENTS: The Situational Awareness Beacon with Reply (SABER) system provides critical battlefield/operating area situational awareness and friendly ID capabilities by uniting GPS and communications technologies. The SABER system consists of a GPS receiver and two-way radio capable of Over-The-Horizon (OTH) and Line-Of-Sight (LOS) secure and no secure communications, plus a Collection of Broadcast From Remote Assets (COBRA) transmitter. The GPS receiver provides an accurate position of the user which is broadcast over the various RF links for reception by other SABER beacons. When a correctly encoded interrogation signal is received by the SABER, it transmits a reply via the radio of the users identification, position, heading, and speed. The interrogating system can be any member of the user's command and control structure. Additionally, SABER-equipped units who are preparing to launch an attack will send an intent-to-shoot LOS transmission indicating the target position and a kill radius. All SABER units on the network will compare the area with their own position. If an overlap exists, a "Don't Shoot" reply is sent to prevent fratricide.

<p><u>Naval Mission Planning System (NavMPS)</u> This line item provides funding to procure NavMPS for USN/USNR/USMC/USMCR. Program cost is not directly related to FY hardware quantity; software is a major cost factor independent of FY hardware quantity and cost. Installations are planned for aviation capable ships, air stations, aviation training/support facilities and deployed aviation units. Items to be funded in this line include:</p> <p>Work Station Components - NavMPS procures tactical computer hardware through the non-developmental item acquisition strategy. Tactical computer equipment is used to plan and analyze aircraft routes under various mission configurations and operational threat environments. Primary output is route plans for mission execution. New workstations consist of the components to make a complete workstation.</p> <p>Production Support Services - Cost element includes production support services, engineering support services, independent verification and validation test and acceptance, site activation, quality assurance efforts, etc.</p> <p>Software Releases - NavMPS produces software releases via an evolutionary acquisition process. These releases contain enhancements based on fleet inputs and emerging technology. They also contain changes required to retain compatibility with supported platforms, associated weapons, and threat and imagery data bases providing input to NavMPS. Software releases are independent of hardware buys.</p> <p>The hardware mix has changed due to N62/N88 direction to accelerate migration to GCCS/DII-COE based environment. PMA-233 will provide installed Mission Planning hardware, servers and planning stations, on a 3 year replacement cycle. The hardware mix has changed to reduce seat costs and support thruput requirements of servers and laptop PCs.</p>

NOTE: GCCS-M Ashore transfers to the GCCS-M (BLI 2608) in FY01. Detail budget justification material for FY99 and FY00 is included in the GCCS-M P-1 for budget comparability.
PROGRAM COVERAGE:

JUSTIFICATION OF BUDGET YEAR REQUIREMENTS: The Global Command and Control System - Maritime Ashore program (formerly JMCIS Ashore) provides evolutionary systems and ancillary equipment upgrades to support the CNO, Fleet Commanders in Chief, Unified Commanders, Type Commanders, Force Anti-Submarine Warfare (ASW) Commander, and Submarine Operating Authorities worldwide. The Command, Control, Communications, Computers, and Intelligence (C4I) services provide a single system to receive, process, display, maintain and/or assess the unit characteristics, employment scheduling, material condition, combat readiness, warfighting capabilities, positional information and disposition of own and Allied forces, and to optimize the allocation of those resources. GCCS-M Ashore will provide current geolocational information on hostile land, sea and air forces integrated with environmental and other nationally derived information. GCCS-M Ashore will provide the tools necessary for operational commanders to execute plans, and to transmit tasking and tactical information to forces. The Joint Maritime Command Information System (JMCIS) OSIS Baseline Upgrade (OBU) Evolutionary Development (OED) program (previously OBU and included in LI 2906 NCCS Ashore) provides evolutionary systems and ancillary equipment upgrades to support three Joint Intelligence Centers (JIC), one JIC Detachment, one Training Center and one Software Support Activity. JMCIS OED provides for the analysis of multi-source intelligence to produce comprehensive reports of foreign forces and potential hostile activity. It also provides near-real-time all-source fusion, correlation and analysis tools, directly feeding automated reporting capabilities. JMCIS OED maintains characteristics and performance data on weapons platforms, collecting non-organic data from ashore and afloat sensors, and developing an all-source tactical picture. This data is disseminated to the operating forces for tactical threat warnings, decision making support, and support of Over-the-Horizon-Targeting. This line item contains equipment to support the Joint Global Command and Control System (GCCS). GCCS (Joint) is an operational multi-service/agency C4I program encompassing both strategic and tactical C4I functions. GCCS (Joint) supports the National Command Authority and the CINCs by providing C4I data processing capabilities, including status of forces and support requirements for use in national security decision making, force preparation and operational planning execution. The Navy's procurement provides equipment to support the GCCS (Joint) Automated Data Processing Equipment configuration.

JH031. GCCS-M Ashore . Provides the Navy Command Center and Fleet, Unified and TYCOM Command Centers with a common C4I capability. Using iterative hardware/software releases, GCCS-M Ashore implements incremental changes in an evolutionary manner using modular segments as operational requirements dictate and as funding and technology allow. Hardware suites to support GCCS-M Ashore follow an iterative hardware and software release along with IT-21 compatible client/server design implementing LAN and WAN architecture, serial and parallel processors, communications and database servers. GCCS-M Ashore also offers distributed briefing capabilities among commands using video and large screen displays.

JH011. JMCIS OED Upgrade. Ocean Surveillance Information System Baseline Upgrade (OBU) Evolutionary Development (OED) provides for the analysis of intelligence information from multiple sources to produce a comprehensive report of activities. OED provides positional data and operational intelligence to commanders at all levels.

JH036. GCCS (Joint). All procurements will directly support GCCS (Joint) and is in accordance with Joint Staff direction. GCCS (Joint) consists of standard hardware, standard software, and service/site unique software. GCCS (Joint) is an open systems client-server environment using COTS and NDI software and hardware and service/site unique software. Procurements will include Workstations to replace Database and Application Servers, Local Area Network (LAN) hardware, and software communications equipment. GCCS-T has the same hardware and additional encryption equipment.

COST (in millions)		\$4.3	\$18.8	\$0.03	\$0.0						\$23.2
<p>PROGRAM COVERAGE:</p> <p>Narrative Description/Justification: Commander's Tactical Terminals/Joint Tactical Terminals (CTTs/JTTs) provide designated platforms with the critical capability to receive near-real-time (NRT) contact data reports via Ultra High Frequency (UHF) communications links called Tactical Data Information Exchange Subsystem (TADIX) B and Tactical Related Applications (TRAP) Data Dissemination System (TDDS) and to receive and transmit tactical intelligence dissemination networks, such as Tactical Information Broadcast Service (TIBS) and Tactical Reconnaissance Intelligence Exchange System (TRIXS). This data provides over-the-horizon targeting (OTH-T) for the targeting and retargeting of missiles, global detection and cueing information from multiple sources to tactical users worldwide, theater information with tracking accuracy of fast moving targets to joint operational users, and direct dedicated links for critical time sensitive surveillance information to battlefield commanders. The CTT, one of the two migration systems identified in the DOD approved Integrated Broadcast Service (IBS) Plan presented to the House Permanent Select Committee on Intelligence (HPSCI), is undergoing in-depth testing and operational assessment by all services. Successful developmental tests have been conducted both in the lab and aboard ship. The JTT, as required by the IBS Plan, will evolve from the CTT and OPTEVFOR will conduct Follow-on Operational Test and Evaluation (FOT&E), if required, on any functional differences between the CTT and JTT. Common IBS Modules (CIBS-M) provide expanded capability for JTT to meet outyear and emergent requirements and allow JTT functionality to be incorporated into other open architecture systems.</p> <p>JUSTIFICATION OF BUDGET YEAR REQUIREMENTS: The last year of CTT procurement was FY 97; installs continue through FY 99. FY99 funds are for production support and installation of CTTs and procurement of JTTs. FY00 funds are for procurement, production support and installation of JTTs. FY01 funds are for production support</p> <p>INSTALLATION AGENT: SPAWARSSYSCEN Charleston and SPAWARSSYSCEN San Diego will install systems on Navy surface ships, submarines and Navy Shore stations. Shipboard installations will be accomplished by Alteration Installation Teams (AITs)</p>

Notes/Comments: Initial 7 installations in FY00 are to labs and test platforms supporting acceptance testing. These installations will be completed quickly using all available installation activities to support product acceptance and familiarizing installers with equipment and process. Later installs are started as soon as possible following equipment availability. Completion quarter is dependent on ship availability and battlegroup schedules

The Naval Space Command has operated the Navy Space Surveillance Network, commonly known as "the Fence", since 1961. Headquartered at Dalgren, VA, the Fence and associated mission processing systems are a critical part of the overall national space surveillance network. The Fence is the only dedicated, uncued sensor in the world. The Fence provides collision avoidance, maneuver detection, NASA requirements for the shuttle, MIR and International Space Station-launch protection and orbit analysis, and Alternate Space Control Center (ASCC) backup to Space Control Center in Cheyenne, Mountain, CO. Aging Components have risked ability to "maintain a constant surveillance." Procurement of computer system hardware and software is necessary to adequately manage catalog growth and handle workload caused by lack of ephemerides [a computerized listing, tracking and prediction of locations of both space junk (such as older orbital objects and other national launches which failed to properly return from orbit) and current active in-use satellites] as the volume of orbital objects increases. This Service Life Extension Program of the Naval Space Surveillance "Fence" is necessary in order to ensure continued operation of the nation's only unalerted space sensor.

The surveillance mission is accomplished by systems performing four operational functions as follows:

1. **Sensor:** Data acquisition of satellites "radar" signals is performed by a network of three transmitting and six receiving stations located on the great circle across the southern United States.
2. **C2 Connectivity:** Each receiver station is connected to the Dalgren Center by dedicated phone line for data transfer. In addition, a command and control network links all field stations and the Dalgren Center in a "party line" manner for network operational and administrative coordination.
3. **Command Center:** Satellite detection and correlation with predictions is performed by digital computers at the Dalgren Virginia Center.
4. **Processing:** Storage, retrieval ,and updating of orbital elements of past, present, and future paths of all known orbital objects are performed at the computer center in Virginia.

The Fence program maximizes the use of Commercial of the Shelf (COTS) software and hardware.

Fiscal Year 2000 includes a congressional add of \$1.2M for the procurement of super span ultimate building machines, which enable Naval facilities to construct rapid shelters for equipment.

NOTE: GCCS-M Tactical Mobile transfers to the GCCS-M line item (BLI 2608) beginning in FY01. Detail budget justification material for FY99 and FY00 is included in the GCCS-M P-1 for budget comparability purposes.

Narrative Description/Justification: The Global Command and Control System - Maritime (GCCS-M) Tactical/Mobile program provides evolutionary systems and ancillary equipment upgrades to support the Unified Commanders, Fleet Commanders, Navy Component Commanders, the Maritime Sector Commanders (Ashore), the Theater Commanders (Ashore) and the Naval Liaison Element Commanders (Ashore) with the capability to plan, direct and control the tactical operations of Joint and Naval Expeditionary Forces and other assigned units within their respective area of responsibility. These operations include littoral, open ocean, and over land all sensor (i.e. EO, IR, ISAR, etc.) surveillance, anti-surface warfare, over-the-horizon targeting, counter-drug operations, power projection, antisubmarine warfare, mining, search and rescue, and special operations. Between FY97 and FY99, this program was known as the Joint Maritime Command Information System (JMCIS) Tactical/Mobile (JTM) program. Prior to FY97, this program was part of the Navy Command and Control System (NCCS) Ashore program.

GCCS-M Tactical/Mobile Systems include fixed site Tactical Support Centers (TSCs) and mobile components which are the Mobile Operations Control Centers (MOCCs), Mobile Ashore Support Terminals (MASTs) and Mobile Integrated Command Facilities (MICFACs). The Command and Control services provided include analysis and correlation of diverse sensor information; data management support, command decision aids; access to rapid data communication, mission planning and evaluation; dissemination of ocean surveillance positional data and threat alerts to operational users ashore and afloat. All Tactical/Mobile variants include C4I systems based on the GCCS-Maritime architecture which is Defense Information Infrastructure (DII) Common Operating Environment (COE) compliant.

TSC's provide C4I capability, air-ground, satellite and point-to-point communications systems; sensor analysis capabilities; avionics and weapons system interfaces and facilities equipment. MOCC is a scalable and mobile version of the TSC for contingency operations. For example, a MOCC has been deployed to Bosnia for support of P-3 operations and to provide an on-site C4I capability. MAST and MICFAC are mobile facilities designed to support a theater commander or naval liaison element ashore. MAST provides a basic deployable C4I capability for rapid deployment to remote locations. Support of the Liberian contingency operations is an example. The MICFAC is a robust deployable C4I system that can support a numbered fleet commander's staff ashore. MICFAC Bahrain has acted as the COMUSNAVCENT C4I command center when the hard site was undergoing upgrades. This program assures that through the implementation of evolutionary acquisition, the existing TSCs, MOCCs, MASTs and MICFACs are modernized to fulfill their operational requirements. Beginning in FY01, the MAST and MICFAC systems will begin to transition into the Joint Mobile Ashore Support terminal (JMAST) system which is a consolidation and upgrade of the MAST and MICFAC.

This budget also includes funds for the MIUW Van Upgrades.

COST (In Millions)	*		*	65.2	41.0	47.0	45.8	44.6	72.6	73.6	Cont.	*

*Note: All previous procurement budgets for this item were submitted in the Procurement, Defense-Wide appropriation as Distributed Common Ground Systems (DCGS), PE 0305208D8Z. OSD Program Decision Memorandum of 18 August 1998 transferred all funding for this family of programs to the services beginning with FY 1999

The Joint Services Imagery Processing System – Navy (JSIPS-N) is the Navy’s portion of the Distributed Common Ground System (DCGS). DCGS is a cooperative effort between the services, agencies, and DoD to provide systems capable of receiving, processing, exploiting, and disseminating data from airborne and national reconnaissance platforms. DCGS is further subdivided into systems which process, exploit, and disseminate Measurements Analysis and Signatures Intelligence (MASINT) data, Signals Intelligence (SIGINT) data, Multi-Intelligence Reconnaissance data, and Imagery data. Cooperative imagery processing systems are collected under the general heading, Common Imagery Ground/Surface Systems (CIGSS). JSIPS-N is the Navy CIGSS component.

JSIPS-N has a capability to receive, process, exploit, store, and disseminate imagery, imagery-derived products, and Imagery Intelligence (IMINT) reports based on multi-source from multiple inputs. The primary mission of JSIPS-N is to assist strike planners, tactical aviators, and Marine Corps amphibious planners in the delivery of precision ordnance (including Tomahawk Cruise Missiles) on target.

JSIPS-N includes three major components:

Softcopy Exploitation Segment (SES)- consisting of the Digital Imagery Workstation Suite Afloat (DIWSA), Strike Planning Archive (SPA) and the Precision Targeting Workstation (PTW).

National Input Segment (NIS) - equipment which processes imagery from national sensors

Tactical Input Segment (TIS) - equipment which processes imagery from tactical sensors. FY99 TIS funds will procure integration efforts for the Navy Input Segment (NAVIS) and Common Imagery Processor (CIP) as risk mitigation for Shared Airborne Recognizance Pod (SHARP) and Real-time Execution Decision Support (REDS) for the Time Critical Strike (TCS) demonstrations.

JSIPS-N is being installed onboard aircraft carriers (CV/CVN), amphibious assault ships (LHA/LHD), select fleet flag ships (AGF/LCC) and shore sites.

Secondary missions of the system are to provide near-real-time imagery and support to fleet intelligence assets, Special Operations Forces, and to support primary exploitation and dissemination of tactical organic and theater IMINT products.

<p>The NAVSEA RADIAC Program is responsible for ensuring the availability of radiation monitoring instruments to support uses ranging from operation and maintenance of nuclear propulsion plants in ships and submarines to industrial radiography as well as medical applications and the radiological leg of chemical, biological and radiological defense. The program provides centrally managed acquisition of equipment to detect and measure radiation and convert these measurements into meaningful terms so that Navy personnel can adequately control radiation exposure. The instruments are used to ensure the safety of personnel and the environment. The Multifunction Radiac (MFR) and Dosimetry System replace older systems with equipment with increased capability that can be operated and maintained at a lower life cycle cost.</p> <p>REQUIREMENTS:</p> <ol style="list-style-type: none"> 1. This program provides for the initial procurement and distribution of General Purpose Electronic Test Equipment (GPETE). This equipment is essential to the operational readiness of the Navy for repair, installation, and maintenance (preventive and routine) of electronic systems and equipments, both afloat and ashore. The GPETE procured must meet rigid technical requirements, be cost effective and satisfy valid deficiencies in authorized allowance.

PROGRAM DESCRIPTION/JUSTIFICATION

Naval Surface Warfare Center, Port Hueneme Division, San Diego Detachment (NSWC PHD DET SD), formally known as ICSTF, is the Navy owned and operated combat systems program integration test site in San Diego at SPAWAR SYSTEMS CENTER. NSWC PHD DET SD performs an essential role in promoting the readiness of surface combatant computer program networks. NSWC PHD DET SD's mission is to perform certification testing of computer programs prior to delivery to the Fleet. The threat driven requirement of inter-system data exchange has continued to grow exponentially since the USS CALIFORNIA's protracted pierside recovery program in the 1970's. NSWC PHD DET SD has been used efficiently to detect combat system computer program problems on most configurations of surface combatants, providing knowledge of and corrective action for the remaining problems. The cost of fixing the problems increase significantly with time, either in dollars and/or ship operations days. The cost of detecting the problems during deployment may be measured in harsher terms.

NSWC PHD DET SD is the only permanent Navy facility for testing CV/CVN, LHD, LHA, LSD, LPD-17, DD 963 and FFG ship class shipboard combat system computer networks and for providing combat system in-service engineering support for Fleet identified problems. The site can support basic testing of the current combat system configurations. As existing combat subsystems are upgraded and/or new subsystems are added to the CV/CVN and amphibious ship class combat system configurations, NSWC PHD DET SD must upgrade its testbeds to perform computer network integration testing. In addition, with the issuance of CNO msg. DTG021648Z May 98 on Battle Group Interoperability (BGI), NSWC PHD DET SD must expand its capabilities to support Battle Group Interoperability testing.

The basic procurement program outlined herein is directed at adding to NSWC PHD DET SD the capability of supporting the following upgrades/new systems and to support Battle Group Interoperability testing:

Fiber Optics	CVN-76 Combat System	LPD-17 Combat System	C2P Upgrade
Open Architecture	CEC Upgrades	CEC with DDS System	
AN/SPS-48E	COTS	NAVSSI Upgrade	
SSDS/ICDS	C4ISR	AIEWS	
Simulators/Stimulators	LANs	DX/DR

APPROPRIATION/BUDGET ACTIVITY

OTHER PROCUREMENT, NAVY/BA-2 Communications and Electronic Equipment

P-1 ITEM NOMENCLATURE

Integrated Combat Systems Test Facility (ICSTF) - 296000

In addition, the basic program provides for increasing centralized test support so that NSWC PHD DET SD can provide simultaneous support to multiple ship classes and to connect to geographically dispersed land based test sites (CONUS) to participate in total ship integrated testing.

Included is procurement of equipment at the Space Warfare System Center (SWSC) CHAS, SC for the Distributed Engineering Plant to ensure Battle Group Interoperability.

All procurements will be received and installed by NSWC PHD DET SD. Installations are based on CSIT and BG Interoperability schedules.

The shipboard Electronics Systems Evaluation Facilities (SESEF) are Navy-owned and operated test ranges capable of action as the partner in two party operational performance testing of systems currently in the Fleet (i.e., AIMS MK XII IFF (all modes)), TACAN, conventional radars (both search and fire control), communication systems secure voice and LINK 11/4A). The SESEF provides ship Captains and Type Commanders the capability of measuring and testing a ship's condition of material readiness at the completion of construction, industrial availability, during routine ship operations and prior to deployment.

Consistent with the CNO's approval for modernization of SESEFs, OPN funds have been provided to procure equipment to upgrade the capabilities for Ft. Story, VA., San Diego, CA., Puget Sound, WA., Pearl Harbor, HI., Yokosuka, Japan, and Mayport, FL. This equipment will provide two party capabilities to test the new and more complex ship board electronic systems (i.e., SLQ-32, AN/SPY-1, etc.) and perform antenna radiation pattern measurements.

Funds will be used to procure emergency field change kits, hardware devices and sensor kits to solve Electromagnetic Interference (EMI) problems in electronic systems/equipments throughout the surface ship Navy. The fixes which include various types of filters, limiters, blankers and shielding will be installed by fleet support and maintenance personnel to eliminate EMI where it is causing unacceptable degradation in the operational performance of mission-essential systems. EMI Control Instrumentation will be procured for use in identifying the sources of EMI and determining the extent of EMI so that effective corrective measures can be applied. Better definition of the problems will also provide data which will be used by designers to reduce EMI problems in future systems and equipments. The instrumentation procured will include automated and special EMI test equipment (e.g. spectrum analysis, field intensity meters, AN/PSM-40 series test sets, etc.). Instrumentation, hardware and software will also be procured to upgrade the Frequency Assignment Computer Terminal Systems (FACTS) and to provide remote access capability to the Communications Area Master Station (CAMS) and other high-density users.

Estimates include competitive sourcing savings associated with consolidation of production support contracting efforts.

THIS IS A CONSOLIDATED OPN BUDGET FOR THE FOLLOWING ITEMS:

ADVANCED SENSOR DISTRIBUTION SYSTEM (ASDS):

ASDS IS A RADAR DISTRIBUTION SYSTEM WHICH CONVERTS NAVAL SURFACE AND AIR SEARCH RADAR INFORMATION INTO A STANDARD DIGITAL FORMAT, WHICH DISTRIBUTES THIS DATA TO RADAR NAVIGATION AND TACTICAL DISPLAYS THROUGHOUT THE PLATFORM. THE ASDS SB-4229A(V)/SP RADAR SIGNAL DISTRIBUTION SWITCHBOARD IS DESIGNED FOR FAST, EFFECTIVE SWITCHING OF ALL NAVAL RADAR VIDEO, IFF AND MIL-STD-751 DIGITAL DATA TO ALL COMBAT SYSTEM DISPLAY CONSOLES THROUGHOUT THE PLATFORM. THE ASDS RADCOR IS A RADAR RECORDER WHICH PERFORMS LIVE RADAR RECORDING OF THE RADDs DATA STREAM AND SELECTED VIDEO. THE ASDS CV-3989(V)/SP DUAL SIGNAL DATA CONVERTER ACCEPTS STANDARD RADAR POSITIONAL INTERFACES AND RECEIVES INPUTS FROM SHIPBOARD NAVIGATIONAL SENSORS. THE ASDS PORTABLE RADAR OPERATOR VIDEO TRAINER (PROVT) PROVIDES DUAL CHANNEL SIMULATED RADDs OUTPUT SIGNALS PRODUCED FROM SCENARIO GENERATED TARGET DATA. THE TACTICAL SYSTEM INTERFACE UNIT (TSIU) ALLOWS TWO-WAY COMMUNICATION BETWEEN MULTIPLE AN/SPA-25G DISPLAYS, WHICH ENABLES FILTERING AND PERFORMS TRACK FILE MANAGEMENT. THE ASDS CONTROLLER ALLOWS FOR AN/SPA-25G DISPLAYS TO SHARE COMMON TRACK NUMBERS.

SHORE ELECTRONIC ITEMS (TECR):

THE TACTICAL EMBEDDED COMPUTER RESOURCES (TECR) REUTILIZATION PROGRAM - REFURBISHES, RECONFIGURES AND TESTS TECR ASSETS MADE AVAILABLE THROUGH DECOMMISSIONINGS AND OTHER DOWNSIZING EFFORTS AND PROVIDES THESE ASSETS TO SATISFY CURRENT TACTICAL SYSTEMS REQUIREMENTS. TECR DEPOT AND DIMINISHING MANUFACTURING RESOURCES CAPABILITY - INCLUDES PROCUREMENT OF TEST EQUIPMENT AND POTENTIALLY OBSOLETE PARTS TO MAINTAIN BOTH ORGANIC AND ORIGINAL EQUIPMENT MANUFACTURER DEPOTS FOR OUT-OF-PRODUCTION EQUIPMENT WHICH WILL REMAIN IN THE FLEET WELL PAST FY 2010. ADDITIONAL FUNDS WERE PROVIDED IN FY 99 TO UPGRADE AND TEST THE DISPLAY CONSOLES AND ASSOCIATED EQUIPMENT ON OLDER US NAVY SHIPS AND TEST SITES, REPLACING THEM WITH EMULATORS, AN/UYQ-70 DISPLAYS AND ASSOCIATED PERIPHERAL EQUIPMENT. THESE DISPLAYS AND ASSOCIATED EQUIPMENT WOULD BE TESTED TO ASSESS IMPROVEMENTS IN THE MAN/SYSTEM INTERFACES WHICH CONTROL THE COMMAND/CONTROL/WEAPONS/COMBAT SYSTEMS REQUIRED FOR THE MISSION OF THESE NAVY SURFACE COMBATANTS.

CALIBRATION STANDARDS:

THESE FUNDS PROCURE CALIBRATION EQUIPMENT FOR INTERMEDIATE AND ORGANIZATIONAL MAINTENANCE LEVELS. TEST AND MONITORING SYSTEMS (TAMS), WHICH INCLUDE TEST EQUIPMENT AND GAGES, MUST BE CALIBRATED TO ENSURE THE EQUIPMENT IS OPERATIONAL, ACCURATE AND PRECISE. FUNDS ARE USED TO PROCURE CALIBRATION STANDARDS. CALIBRATION STANDARDS ARE EQUIPMENTS WHICH ENSURE THE ACCURACY OF TEST EQUIPMENT USED TO INSTALL, ALIGN, AND MAINTAIN ALL NAVY WEAPONS SYSTEMS SHORE AND AFLOAT. IMA MECHANICAL STANDARDS PROGRAMS PROVIDE VARIOUS NEW AND REPLACEMENT CALIBRATION EQUIPMENT FOR INSTRUMENT REPAIR AND CALIBRATION SHOPS ABOARD TENDERS AND SHORE BASED INTERMEDIATE MAINTENANCE ACTIVITIES. THE SHIPBOARD GAGE CALIBRATION PROGRAM PROVIDES THE ORGANIZATION MAINTENANCE LEVEL ABOARD SHIP WITH PORTABLE CALIBRATION EQUIPMENT TO PROVIDE CALIBRATION SUPPORT IN ONLY SPECIFIC AREAS OF MEASUREMENT. INTEGRATED CONDITION ASSESSMENT SYSTEM (ICAS) IS AN NDI (COTS EQUIPMENT) COMPUTER BASED SYSTEM THAT PROVIDES REAL-TIME, ON-LINE MACHINERY CONDITION MONITORING AND FAILURE DETECTION, DIAGNOSIS, TRENDING FOR FAILURE PROGNOSIS AND EXPERT TROUBLESHOOTING CAPABILITY. ICAS IS LINKED THROUGH DATA NETWORKS TO OTHER CRITICAL SHIP SYSTEMS, SUCH AS MACHINERY CONTROL, DAMAGE CONTROL AND BRIDGE SYSTEMS TO RECEIVE NECESSARY SENSORY INFORMATION.

SHORE ELECTRONIC ITEMS (AN/UYS-2):

PROCURES AN/UYS-2 HARDWARE, INCLUDING ASSEMBLIES AND COMPONENTS; QUALITY ASSURANCE, PRODUCTION ENGINEERING AND ACCEPTANCE TESTING IN SUPPORT OF AN/UYS-2 PROCUREMENTS; SUPPORT AND MATERIALS INCIDENT TO MODIFICATION OF AN/UYS-2A EQUIPMENT; PROCUREMENT OF COTS HAARDWARE TO SUPPORT MODERNIZATION/REPLACEMENT OF AN/UYS-2A EQUIPMENT; PROCUREMENT/DIRECT SUPPORT COSTS TO SUPPORT MODERNIZATION ACTIVITIES.

RADAR SUPPORT:

AN/SPS-73(V) RADAR - PROVIDES REPLACEMENT RADAR FOR AN/SPS-64 RADAR ON ALL SHIP CLASSES AND REPLACEMENT FOR AN/SPS-55 AND AN/SPS-67(V)1 RADAR ON VARIOUS CLASS SHIPS.

FFG UPGRADES (NRF) - PROVIDES WEAPON/COMBAT SYSTEM UPGRADES FOR NAVAL RESERVE FORCE FFG.

EQUIPMENT INSTALLATION - FUNDING IS THE INSTALLATION OF EQUIPMENT INCLUDING FLEET MODERNIZATION PROGRAM INSTALLATIONS, INSTALLATION OF TRAINING EQUIPMENT, INSTALLATION OF EQUIPMENT IN OTHER SHORE FACILITIES AND INSTALLATION/CERTIFICATION/TESTING OF EQUIPMENT.

<p>Note: Portable Radios Program transfers to the Communications Items Under \$5M budget (BLI 3057) in FY01. Detail budget justification material is in the Communications Items Under \$5M budget (BLI 3057) for budget comparability.</p> <p>PROGRAM COVERAGE:</p> <p>Portable and mobile radios support the unique air, sea, and land environment of the Navy Explosive Ordnance Disposal Units, Construction Battalions, Naval Beach Groups, Tactical Air Control Units, Naval Special Warfare Units, and Shipboard requirements defined by OPNAVINST C2300.44F.</p> <p>JUSTIFICATION OF BUDGET YEAR REQUIREMENTS:</p> <p>Requirements include:</p> <ul style="list-style-type: none"> a. Combat Survivor Evader Locator Beacons (CSEL). b. Single Channel Ground Air Radio System (SINGARS) VHF FM units, both manpack and vehicular for anti-jam communications. c. HF radios for beyond-line-of-sight operations. d. Emergency lifeboat radios. e. Survival ground to air radios. <p>Hierarchical Yet Dynamic Reprogrammable Architecture (HYDRA) AN/SRC-55 will replace all stovepipe wireless shipboard systems (DCWIFCOM, MOMCOM, PVPCS, FDSC) with an integrated system on all ship classes. HYDRA is a wireless digital voice and data communications system using COTS trunking technology. HYDRA is capable of interfacing with PBX/BG Cellular/RF systems.</p> <p>Unit costs vary with the ship type and are based on the number of channels and radios in the system. Installations are performed by AITs during dockside availabilities.</p>									

BUDGET ITEM JUSTIFICATION SHEET									DATE	
APPROPRIATION/BUDGET ACTIVITY OP,N - BA2 COMMUNICATIONS & ELECTRONIC EQUIPMENT									February 2000	
P-1 ITEM NOMENCLATURE BLI: 3040 SINCGARS						SUBHEAD 52D5				
	PY	FY 1999	FY 2000	FY 2001	FY 2002	FY 2003	FY 2004	FY 2005	TO COMP	TOTAL
QUANTITY										
COST (in millions)		\$27.7								
<p>Note: The SINCGARS Program transfers to the Communications Items Under \$5M budget (BLI 3057) in FY01. Detail budget justification material is in the Communications Items Under \$5M budget (BLI 3057) for budget comparability.</p> <p>PROGRAM COVERAGE: The Shipboard SINCGARS (Single Channel Ground and Airborne Radio System) provides tactical anti-jam radios to support ship-to-shore communications during amphibious operations. This program also fills the requirements for VHF ship-to-ship and ship-to-boat communications, replacing the aging AN/VRC-46 family of radios. FY 1999 provides funding for the the buy-out of the SINCGARS requirements. Production Support provides funding for procuring modified ILS documentation and support packages which reflect SINCGARS-SIP configurations and to integrate the products of this program with other components of the JMCOMS system, such as ADNS. FY99 PBD-290 provided funds and directed the Navy to accelerate procurement of equipment in order to conform to Joint PMO plans.</p> <p>EXPLANATION OF PROGRAM CHANGE: Systems are being procured in configurations which are specific to each ship class. These configurations consist of differing numbers of five standard subcomponents. The SIP version of SINCGARS is to be fielded, replacing non-SIP SINCGARS which have already been partially fielded.</p> <p>Standard Components:</p> <ol style="list-style-type: none"> 1) Ship System (AN/SRC-54A) - A SINCGARS System Improvement Program (SIP) configuration which uses a single radio in a single mount. 2) Ship System (AN/SRC-54B) - A SINCGARS SIP configuration which uses two radios in a single mount. 3) Multicoupler (TD-1456) This multicoupler is being provided to all ships to couple up to four SINCGARS radios to a single antenna; one radio can operate in anti-jam mode. 4) SINCGARS Remote Control System (OT-637A) - A device for providing remote control of radios from the command and control spaces throughout the ship. 5) Test Set (AN/GRM-122) - A test set for testing the unique components of the SINCGARS SIP frequency-hopping radio. <p>INSTALLING AGENTS: Alteration Installation Teams by all SPAWAR field activities.</p>

OP.N - BA2 COMMUNICATIONS & ELECTRONIC EQUIPMENT											BLI: 3050 COMM AUTO		52PQ
				FY 1999	FY 2000	FY 2001	FY 2002	FY 2003	FY 2004	FY 2005	TO COMP	TOTAL	
QUANTITY													
COST (in millions)				\$109.1	\$229.2	\$185.1	\$174.7	\$188.0	\$153.6	\$147.6	Continuing	Continuing	
<p>PROGRAM COVERAGE/JUSTIFICATION OF BUDGET YEAR REQUIREMENTS:</p> <p>NAVMACS II/SMS (PQ065): The Naval Modular Automated Communication System II (NAVMACS II)/Single Message Solution (SMS) automates and increases the speed and efficiency of handling organizational message traffic aboard ships. This system was developed with an open system architecture, and is conducive to technological upgrades. NAVMACS II is the Navy's host platform for tactical (afloat) DMS. NAVMACS II systems are being procured to replace the older NAVMACS systems which lack the speed and capacity to handle current message traffic loads during periods of accelerated combat operations. Tactical DMS satisfies MROC requirements to transition to IP based organizational messaging.</p> <p>Automated Digital Network System (ADNS) (PQ069): Provides automated routing and switching of Tactical and Strategic C4I data via Transmission Control Protocol/Internet Protocol (TCP/IP) networks linking deployed Battle Group units with each other and with the Defense Information Systems Network (DISN) ashore via multiple Radio Frequency (RF) paths. Consists of Commercial Off-The-Shelf (COTS) non-developmental Joint Tactical Architecture (JTA) compliant hardware (routers, processors, switches) and commercial Y2K compliant software (VxWorks toolkit) in a standardized, scalable shock qualified rack design. Provides Internet Protocol (IP) connectivity afloat and ashore. Merges multiple redundant stove pipe communications circuits and efficiently manages RF assets resulting in better throughput using existing RF media. Line includes Network Operation Centers (NOCs) Ashore.</p> <p>Tactical Switching (PQ070): Provides the switching and bandwidth management components of high capacity interoperable communications, as the number one fleet CINC requirement in the Navy Wide C4 and Information Warfare (IW) Joint Mission Area (JMA) assessment. Provides for the shore segment interconnect of an end-to-end dynamic bandwidth management, Internet Protocol, and Channel Access Protocol capability to deploying Battle Groups/Amphibious Ready Groups and other support units. Automates the major shore nodes which allow network centric and lights-out operations. Provides afloat interoperability of tactical and strategic C4I circuits with Marine Corps Ground Mobile Forces (GMF). Tactical Switching (which includes GMF interoperability, Automated Network Control Center (ANCC), Automated Technical Control (ATC) and the Automated Digital Multiplexer System (ADMS)) is the key enabling mechanism for the execution of the Automated Digital Network System (ADNS) strategy which is essential to meeting the Information Technology for the 21st Century (IT21) vision.</p> <p>Element Management System (PQ075): Provides ships and shore sites with the capability to rapidly realign communications, and deploys essential baseline elements of IT-21 Automated Digital Network Systems (ADNS). Automates and remotely controls communications switching and quality monitoring equipment which eliminates manual operations. Provides operator controlled automated configuration of the Radio Communications System Circuits, computerized communications plan development and quality monitoring and reporting. Eliminates manual operator functions (patch panels) and provides open system architecture in accordance with Defense Information Infrastructure (DII).</p> <p>Integrated Shipboard Network Systems (ISNS) (Formerly ATM LAN) (PQ007): The Integrated Shipboard Network System (ISNS) program provides every Navy ship, including submarines, with a reliable, high-speed Local Area Network (LAN) that will provide LAN and Wide Area Network (WAN) access to the DISN WAN (Secure and Nonsecure Internet Protocol Router Network -SIPRNet and NIPRNet). It provides real-time information exchange between afloat units, Component Commanders, numbered Fleet Commanders and Fleet CINCs through the migration of existing legacy systems into the IT-21 strategy and is a key factor in the implementation of the Navy's portion of Joint Vision 2010. U mission capability. The ISNS program maximizes the use of both COTS software and hardware resulting in dependence on commercially supported hardware and software. Engineering and technical support is provided so that existing systems will keep pace with hardware and software that is supported commercially.</p> <p>Afloat PCs (PQ085, PQ086, PQ088): Funds procurement of PCs for Amphibious Ships, Surface Combatants, and Aircraft Carriers/Squadrons respectively.</p> <p>INSTALLING AGENTS: Installation will be by Alteration Installation Teams (AIT) from SPAWAR field activities.</p>

D. REMARKS

Note: NAVMACS, ADNS and ISNS unit cost are based on average cost of all units. Variances are due to the diverse types of ship sets being procured. Programs (except NAVMACS) not displaying FY99 data migrated to 52PQ beginning in FY00

D. REMARKS												
<p>Note: Between years, the composition of ISNS ships change, i.e., one year may have more larger ships such as CVs while another year may consist mainly of SSNs. As a result, the per unit costs are different. Additionally, different ships require different peripherals listed under the "Various" category, which leads to per unit cost differences in that category.</p>

BUDGET ITEM JUSTIFICATION SHEET									DATE	
APPROPRIATION/BUDGET ACTIVITY									February 2000	
OP,N - BA2 COMMUNICATIONS & ELECTRONIC EQUIPMENT						P-1 ITEM NOMENCLATURE			SUBHEAD	
						BLI: 3055 Communication Items Under \$5M			52NG	
	PY	FY 1999	FY 2000	FY 2001	FY 2002	FY 2003	FY 2004	FY 2005	TO COMP	TOTAL
QUANTITY										
COST (in millions)		\$31.2	\$30.5							
<p>NOTE: The Communications Items Under \$5M budget (BLI 3055) transfers to Communications Items Under \$5M (BLI 3057) in FY 01. Detail Budget justification material is in the Communications Items Under \$5M (BLI 3057) for budget comparability</p> <p>HF Tilt Mechanisms: - Devices to enable vertical whip antenna to be lowered to a horizontal position during flight operations</p> <p>HIGH FREQUENCY RADIO GROUP (HFRG BROADBAND) - Will allow fully automated operation of the HF communications system. The system will reduce the number of topside antenna used, reduce electromagnetic interference and reduce manning requirements..</p> <p>HIGH FREQUENCY SMALL SHIP TRANSMITTER (HFSST NARROWBAND) - HFSST is a one-to-tone radio replacement of legacy arrowbank HF transmitters and antenna couplers, replacing 1960s vacuum tube technology.</p> <p>DIGITAL WIDEBAND TRANSMISSION SYSTEM (DWTS) - UHF line of sight radio system, ship-to-ship and ship-to-shore communications required to support landing force systems. The current program procures DWTS for amphibious and flag ships only. LRIP procurements of low data rate DWTS (DWTS LDR) Begins in FY00.</p> <p>INSTALLING AGENTS: Installation will be accomplished by alteration installation teams (AIT) from SPAWAR field activities.</p> <p>R-2368/URR HF RECEIVER: The R-2368/URR will replace all existing High Frequency (HF) receivers and will provide a capability for automated operation. When Digital Modular Radio (DMR) offers the HF receive capability, the funding will be transferred.</p> <p>RED/BLACK DIGITAL SWITCH/EMS: The Red and Black Digital Switches (transitioning to the Element Management System (EMS)) are essential elements of the Joint Maritime Communications System (JMCOMS)/COPERNICUS switching architecture. These switches will provide the capability for automation of the Radio Communications Suite, via automatic interconnection between the remote subscriber to cryptographic equipment/multiplexers and digital radio equipment. This program provides for the transition of JMCOMS Automated Digital Network System (ADNS) to Integrated Services Digital Network (ISDN) and Asynchronous Transfer Mode (ATM) suitability. Beginning in FY99, EMS provides operator controlled automatic configuration of the Radio Communication System (RCS) circuits, computerized communications plan development, and quality monitoring and reporting. 1</p>										

BUDGET ITEM JUSTIFICATION SHEET		DATE
APPROPRIATION/BUDGET ACTIVITY		February 2000
OP,N - BA2 COMMUNICATIONS & ELECTRONIC EQUIPMENT	P-1 ITEM NOMENCLATURE	SUBHEAD
	BLI: 3055 Communication Items Under \$5M	52NG
<p>FCIP: The Field Change Improvement Plan (FCIP) upgrades Command, Control, Communications, Computers and Intelligence (C4I) equipment on over 200 ships annually by installing field changes to correct equipment and personnel safety hazards, restore reliability, update operating parameters, correct inter-operability problems, and replace obsolete components. Alteration Installation Team (AIT) coordination supports alterations that are made outside scheduled availabilities and integrates AIT installation with Type Command (TYCOM) pier side availability schedules. 1</p> <p>MCIXS: Battle Group Cellular Telephone (BG Cellular)/Maritime Cellular Information Exchange Systems (MCIXS) provides non mission-critical Intra-Battle Group real-time transfer of information using a standard telephone or cellular hand held mobile telephone.</p> <p>VIXS: Video Information Exchange System (VIXS) provides the Fleet with tactical video teleconferencing. The system provides multipoint secure Video Teleconferencing (VTC) between deployed carriers/large deck amphibs, Fleet Commander-in-Chief (CINCs), Chief of Naval Operations (CNO) and select Department of Defense (DOD) commands. Shipboard systems also provide connectivity to the Joint Worldwide Intelligence Communications System (JWICS) VTC system.</p> <p>TMIP: Theater Medical Information Program - Maritime (TMIP-M) program is charged with deployment of both infrastructure and the software to support the theater requirements for healthcare and command and control (C2) activities: clinical, resources, logistics, decision support, etc. The development and release of TMIP software will be conducted incrementally and it will be based on GOTS medical software that is currently available in the military inventory. Software components selected for TMIP are: MAT, CHCS, DBSS, DMLSS, TRAC2ES, and other developed software meets the functionality of SAMS. Subsequent TMIP Block releases will follow. The TMIP-M will leverage IT-21 and NTCSS infrastructure components, as well as installation, logistics, and fleet support components.</p> <p>PORTABLE RADIOS: Portable and mobile radios support the unique air, sea, and land environment of the Navy Explosive Ordnance Disposal Units, Construction Battalions, Naval Beach Groups, Tactical Air Control Units, Naval Special Warfare Units, and Shipboard requirements defined by OPNAVINST C2300.44F. Radios procured include, Single Channel Ground Air Radio System (SINCGARS) VHF FM units, both manpack and vehicular for anti-jam communications, HF radios for beyond-line-of-sight operations, Emergency lifeboat radios, Survival ground to air radios. Hierarchical Yet Dynamic Reprogrammable Architecture (HYDRA) AN/SRC-55 which will replace all stovepipe wireless shipboard systems (DCWIFCOM, MOMCOM, PVPCS, FDCS) with an integrated system on all ship classes.</p> <p>SINCGARS (Single Channel Ground and Airborne Radio System): Single Channel Ground and Airborne Radio System (SINCGARS) provides tactical anti-jam radios to support ship-to-shore communications during amphibious operations. This program also fills the requirements for VHF ship-to-ship and ship-to-boat communications, replacing the aging AN/VRC-46 family of radios. FY 1999 provides funding for the the buy-out of the SINCGARS requirements. FY99 PBD-290 provided funds and directed the Navy to accelerate procurement of equipment in order to conform to Joint PMO plans. Installing Agents: Installation will be accomplished by AIT from SPAWAR field activities. Shipboard SINCGARS (Single Channel Ground and Airborne Radio System): Provides tactical anti-jam radios to support ship-to-shore communications during amphibious operations. This program also fills the requirements for VHF ship-to-ship and ship-to-boat communications, replacing the aging AN/VRC-46 family of radios. FY 1999 provides funding for the the buy-out of the SINCGARS requirements. Production Support provides funding for procuring modified ILS documentation and support packages which reflect SINCGARS-SIP configurations and to integrate the products of this program with other components of the JMCOMS system, such as ADNS. FY99 PBD-290 provided funds and directed the Navy to accelerate procurement of equipment in order to conform to Joint PMO plans.</p> <p>EXPLANATION OF PROGRAM CHANGE: Systems are being procured in configurations which are specific to each ship class. These configurations consist of differing numbers of five standard subcomponents. The SIP version of SINCGARS is to be fielded, replacing non-SIP SINCGARS which have already been partially fielded.</p> <p>Standard Components: 1) Ship System (AN/SRC-54A) - A SINCGARS System Improvement Program (SIP) configuration which uses a single radio in a single mount. 2) Ship System (AN/SRC-54B) - A SINCGARS SIP configuration which uses two radios in a single mount. 3) Multicoupler (TD-1456) This multicoupler is being provided to all ships to couple up to four SINCGARS radios to a single antenna; one radio can operate in anti-jam mode. 4) SINCGARS Remote Control System (OT-637A) - A device for providing remote control of radios from the command and control spaces throughout the ship. 5) Test Set (AN/GRM-122) - A test set for testing the unique components of the SINCGARS SIP frequency-hopping radio.</p> <p>INSTALLING AGENTS: Alteration Installation Teams by all SPAWAR field activities.</p> <p>1. FCIP will transfer to OMN beginning FY00.</p>

COST (in millions)		0.0	\$10.2	0.0	0.0	0.0	0.0	0.0	0.0	0.0	0.0	
<p>Narrative Description/Justification:</p> <p>The Integrated Broadcast Service (IBS) provides warfighters with critical and highly perishable intelligence and information in a single correlated picture via a near-real-time, integrated dissemination architecture. IBS consolidates existing intelligence broadcast systems into a common-format, common-terminal, theater-tailored architecture. The IBS design incorporates new functionality in broadcast and information management, a new message format, and a new receiver. It fields Information Management Elements to geographic CINCs to perform the requirements set forth in the IBS Joint Operational Requirements Document.</p> <p>In FY99, the IBS program also sustained the legacy broadcast systems in their continuing individual acquisition programs, including the TRAP Data Dissemination System (TDDS), Tactical Information Broadcast Service (TIBS), Automated M-22 Broadcast (AMB), and Long-range Information Networked Communication Services (LINCS).</p> <p>TDDS improvements: Procure a software support facility for the Effectively 2.0 deployment TIBS improvements: Procure noise cancellation equipment for the TIBS UHF relay sites. AMB improvements: Procure equipment for the Effectively 3.0 deployment. LINCS improvements: Assist in the tactical extension of systems and networks installed by LINCS during tactical exercise and contingency.</p> <p>*NOTE: Program transfer to Air Force in FY2000. Program transferred to Navy, from DARO, for FY1999 Only.</p>

	BLI: 3057 Communication Items Under \$5M	52NU
<p>FCIP: The Field Change Improvement Plan (FCIP) upgrades Command, Control, Communications, Computers and Intelligence (C4I) equipment on over 200 ships annually by installing field changes to correct equipment and personnel safety hazards, restore reliability, update operating parameters, correct inter-operability problems, and replace obsolete components. Alteration Installation Team (AIT) coordination supports alterations that are made outside scheduled availabilities and integrates AIT installation with Type Command (TYCOM) pier side availability schedules. 1</p> <p>MCIXS: Battle Group Cellular Telephone (BG Cellular)/Maritime Cellular Information Exchange Systems (MCIXS) provides non mission-critical Intra-Battle Group real-time transfer of information using a standard telephone or cellular hand held mobile telephone.</p> <p>VIXS: Video Information Exchange System (VIXS) provides the Fleet with tactical video teleconferencing. The system provides multipoint secure Video Teleconferencing (VTC) between deployed carriers/large deck amphibs, Fleet Commander-in-Chief (CINCs), Chief of Naval Operations (CNO) and select Department of Defense (DOD) commands. Shipboard systems also provide connectivity to the Joint Worldwide Intelligence Communications System (JWICS) VTC system.</p> <p>TMIP: Theater Medical Information Program - Maritime (TMIP-M) program is charged with deployment of both infrastructure and the software to support the theater requirements for healthcare and command and control (C2) activities: clinical, resources, logistics, decision support, etc. The development and release of TMIP software will be conducted incrementally and it will be based on GOTS medical software that is currently available in the military inventory. Software components selected for TMIP are: MAT, CHCS, DBSS, DMLSS, TRAC2ES, and other developed software meets the functionality of SAMS. Subsequent TMIP Block releases will follow. The TMIP-M will leverage IT-21 and NTCSS infrastructure components, as well as installation, logistics, and fleet support components.</p> <p>PORTABLE RADIOS: Portable and mobile radios support the unique air, sea, and land environment of the Navy Explosive Ordnance Disposal Units, Construction Battalions, Naval Beach Groups, Tactical Air Control Units, Naval Special Warfare Units, and Shipboard requirements defined by OPNAVINST C2300.44F. Radios procured include, Single Channel Ground Air Radio System (SINCGARS) VHF FM units, both manpack and vehicular for anti-jam communications, HF radios for beyond-line-of-sight operations, Emergency lifeboat radios, Survival ground to air radios. Hierarchical Yet Dynamic Reprogrammable Architecture (HYDRA) AN/SRC-55 which will replace all stovepipe wireless shipboard systems (DCWIFCOM, MOMCOM, PVPCS, FDCS) with an integrated system on all ship classes.</p> <p>SINCGARS (Single Channel Ground and Airborne Radio System): Single Channel Ground and Airborne Radio System (SINCGARS) provides tactical anti-jam radios to support ship-to-shore communications during amphibious operations. This program also fills the requirements for VHF ship-to-ship and ship-to-boat communications, replacing the aging AN/VRC-46 family of radios. FY 1999 provides funding for the the buy-out of the SINCGARS requirements. FY99 PBD-290 provided funds and directed the Navy to accelerate procurement of equipment in order to conform to Joint PMO plans. Installing Agents: Installation will be accomplished by AIT from SPAWAR field activities. Shipboard SINCGARS (Single Channel Ground and Airborne Radio System): Provides tactical anti-jam radios to support ship-to-shore communications during amphibious operations. This program also fills the requirements for VHF ship-to-ship and ship-to-boat communications, replacing the aging AN/VRC-46 family of radios. FY 1999 provides funding for the the buy-out of the SINCGARS requirements. Production Support provides funding for procuring modified ILS documentation and support packages which reflect SINCGARS-SIP configurations and to integrate the products of this program with other components of the JMCOMS system, such as ADNS. FY99 PBD-290 provided funds and directed the Navy to accelerate procurement of equipment in order to conform to Joint PMO plans.</p> <p>EXPLANATION OF PROGRAM CHANGE: Systems are being procured in configurations which are specific to each ship class. These configurations consist of differing numbers of five standard subcomponents. The SIP version of SINCGARS is to be fielded, replacing non-SIP SINCGARS which have already been partially fielded.</p> <p>Standard Components: 1) Ship System (AN/SRC-54A) - A SINCGARS System Improvement Program (SIP) configuration which uses a single radio in a single mount. 2) Ship System (AN/SRC-54B) - A SINCGARS SIP configuration which uses two radios in a single mount. 3) Multicoupler (TD-1456) This multicoupler is being provided to all ships to couple up to four SINCGARS radios to a single antenna; one radio can operate in anti-jam mode. 4) SINCGARS Remote Control System (OT-637A) - A device for providing remote control of radios from the command and control spaces throughout the ship. 5) Test Set (AN/GRM-122) - A test set for testing the unique components of the SINCGARS SIP frequency-hopping radio.</p> <p>INSTALLING AGENTS: Alteration Installation Teams by all SPAWAR field activities.</p> <p>1. FCIP will transfer to OMN beginning FY00.</p>

<p>Hierarchical Yet Dynamic Reprogrammable Architecture (HYDRA) AN/SRC-55 - will replace all stovepipe wireless shipboard systems (DCWIFCOM, MOMCOM, PVPCS, FDSCS) with an integrated system on all ship classes. HYDRA is a wireless digital voice and data communications system using COTS trunking technology. HYDRA is capable of interfacing with PBX/BG Cellular/RF systems.</p> <p>Unit costs vary with with the ship type and are based on the number of channels and radios in he system. Installations are performed by AITs during dockside availabilities.</p>

D. REMARKS

- ¹ Beginning in FY 00, funding for this program has been transferred to BLI 3050, Subhead 52PQ.
- ² Unit cost variances are due to the diverse types of ship sets being procured as well as the averaging of ship and shore procurements with varying quantities in one procurement cost code (NG239).
- ³ FY99 unit cost includes EMS procurement plus non-recurring engineering cost to integrate 3 ship equipment types into the basic EMS software configuration
- ⁴ TMIP: Unit cost determined by platform configuration, for example CVN/LHD/LHA cost more than other ships.
- ⁵ FY99 program deferred to fund higher priority program.
- ⁶ FY00 program is a Block Upgrade

OUTPUT 33

Notes/Comments

The fluctuation of unit costs are due to: FY99 procurements consists of 8 Kilowatt systems and the FY01 procurements consists of 12 Kilowatt systems
 Installations not started at delivery of equipment, as they are dependent upon ships availability.

MODIFICATION TITLE: SHIP TACTICAL COMMUNICATIONS
 COST CODE: DN017 [0] [0.0]
 MODELS OF SYSTEMS AFFECTED: HIGH FREQUENCY SMALL SHIP TRANSMITTER
 DESCRIPTION/JUSTIFICATION: Provides for fully automated operation of the High Frequency Communications System.

Notes/Comments
 FY98 funds used for production support
 FY99 funding realigned to NG237 to fund higher priority Y2K efforts.

MODIFICATION TITLE: Red/Black Digital Switch/EMS
 COST CODE NG237

MODELS OF SYSTEMS AFFECTED:
 DESCRIPTION/JUSTIFICATION:

Red/Black Digital Switch will provide automated and remote controls of digital circuits. The Element Management System (EMS) supports ADNS functionality beginning in FY99. Beginning in FY00, this program's funding has been transferred to BLI 3050, Subhead 52PQ.

Notes/Comments

FY99 marks the transition to Element Management System (EMS). We are procuring significantly more quantities in FY99 than in prior years so the production lead time has been shortened to facilitate installation in the same year. EMS is different than Red Black Digital Switch even though it is procured under the same cost code. FY99 cost includes 10 EMS procurements plus non-recurring engineering cost to integrate 3 ship equipment types into the basic EMS software configuration

MODIFICATION TITLE: Field Change Improvement Plan (FCIP)
 COST CODE: **NG777**
 MODELS OF SYSTEMS AFFECTED: Various C4I Systems
 DESCRIPTION/JUSTIFICATION: The FCIP upgrades C4I equipment on over 200 ships annually by installing field changes to correct equipment and personnel safety hazards, restore reliability, update operating parameters, correct inter-operability problems and replace obsolete components.

COST (in millions)		\$13.9	\$36.2	\$31.4	\$19.3	\$4.4	\$14.1	\$19.3	Continuing	Continuing
<p>PROGRAM COVERAGE: *This program now includes OPN P-1 Line Item Submarine LF/VLF VME Receiver (314700) beginning in FY00. FY99 detail information is provided for budget comparability.</p> <p>The Submarine Broadcast Support program was established to improve the reliability, efficiency and performance of the Extremely Low Frequency (ELF)/Very Low Frequency (VLF)/Low Frequency (LF) submarine broadcast system. These transmission mediums (ELF/VLF/LF) comprise the primary line of Fleet Ballistic Missile Command, Control and Communications (FBMC3). Two (2) ELF, four (4) VLF and six (6) LF shorebased transmitter sites are Emergency Action Message (EAM) relay points providing primary connectivity between National Command Authorities (NCA) and SSBNs. Tasks are planned/ongoing to improve performance of ELF/VLF/LF broadcast capabilities consistent with changing operational requirements. The ELF Communications Ashore Robustness Program (ECARP) will provide upgrades to existing ELF transmitter systems by replacing degraded, obsolete and high maintenance items that could preclude reliable operation well into the next century. The SLVR system replaces antiquated and limited capability VLF/LF receivers on TRIDENT and SSN (688/Seawolf/New Attack) submarines and at selected shore sites.</p> <p>JUSTIFICATION OF BUDGET YEAR REQUIREMENTS:</p> <p>(1) REM (Range Extension Mode): (W4011) Provides upgrades to increase ocean area coverage of the submarine broadcast to support littoral and special mission submarine operations without requiring costly modifications to increase transmitter output power.</p> <p>(2) VALUE (VLF Ashore Lifetime Upkeep Effort): (W4012) Provides upgrades to correct deficiencies in material condition and logistics support of existing VLF/LF transmitter systems at shore stations worldwide that could preclude reliable operation to the year 2025.</p> <p>(3) NON-FMP Equipment Installation: (W4776) Provides installation support such as Base Electronic System Engineering Plans (BESEP) for Submarine Broadcast Upgrade ((W4008).</p> <p>(4) SLVR: (W4001) A Mission Critical piece of C3I equipment onboard submarines. Procurements are planned through FY01 to change out the legacy shipboard VLF/LF systems. SLVR replaces 20 - 30 year old technology limited VLF receiver systems and provides flexibility for change in addition to reductions in space and weight. This approach will modernize the existing systems to a standard design and eliminates the need for supporting numerous configurations of VLF/LF receiver systems, thus minimizing total cost of ownership/maintenance cost to the Fleet. To be successful, the commercial components must be procured during the brief period of FY98 thru FY01 to insure a single generation of COTS is used for SLVR.</p> <p>(5) SLVR NON-FMP Equipment Installation Shore: (W4776) Provides installation at the VLF/LF shore sites.</p> <p>(6) SLVR FMP Installation Ships: (W4777) Provides installation support to replace the legacy shipboard VLF/LF Systems for Trident SSBN's, SSN 688's, and Tenders.</p> <p>INSTALLING AGENTS: The equipment will be installed by the In-Service Engineering Activity (ISEA).</p>

<p>PROGRAM COVERAGE: The Submarine Communications Program will incorporate a multiplicity of technical advances that address existing attack submarine communications problem areas (e.g. environmental demands on antenna equipment while at speed and depth; replacement of obsolete communications equipment; replacement of message handling equipment, and equipment that will enable submarines to better communicate with the Battle Group Fleet. The following is a list of equipment and a brief description of their functions for all equipment planned for procurement.</p> <p>BASEBAND DISTRIBUTION SYSTEM (BBS) (L0027) - Consists of switching hardware and controller that will allow flexible distribution of baseband signals throughout the submarine Radio Room. The Baseband Switch is a Non-Developmental Item (NDI) that will automate SSN 688 class assets, provide remotely controlled switching operation, allow preset configurations for quick reaction times, reduce needed rack space, and recover fleet configuration control.</p> <p>ANTENNA MODIFICATIONS (L0035) - Modifications to antenna systems in order to provide Very Low Frequency (VLF) performance, Mid Frequency/High Frequency (MF/HF) efficiency, and UHF DAMA and control unit reliability. All SSN/SSBN classes are affected by these modifications.</p> <p>TIME and FREQUENCY DISTRIBUTION SYSTEM (TFDS)/DUAL PACKAGE CESIUM (DPC) (L0078) - The TFDS/DPC provides time and frequency input to communications, electronic warfare, periscope, navigation, combat and ship control systems aboard SSN 688, SSN21, and SSBN 726 class submarines. The TFDS/DPC hardware will be capable of automatic or manual selection of host system standards and Global Positioning Satellite (GPS) receivers.</p> <p>OE-538/BRC ANTENNA GROUP (IMPROVED AN/BRA-34) (L0080) - Provides SSN submarines with a mast mounted, multi-functional antenna to include High Frequency (HF) broadband and Fleet Satellite communications (FLTSATCOM) Demand Access Multiple Access (DAMA) operation. RDT&E Program Element - PE 0604503N pertains.</p> <p>SUBMARINE COMMUNICATIONS SUPPORT SYSTEM RADIO ROOM (SCSS) (L0084) - The SSN SCSS Radio Room will consist of an open system, multimedia, circuit sharing architecture that will serve as the shipboard automated communications control system. Procurement in this line is for the radio room communications racks, chassis, common power supplies and ancillary components required to integrate the fast-attack submarine's communication equipment.</p>										

BUDGET ITEM JUSTIFICATION SHEET		DATE
APPROPRIATION/BUDGET ACTIVITY		P-1 ITEM NOMENCLATURE
OP,N - BA2 COMMUNICATIONS & ELECTRONIC EQUIPMENT		313000 SUBMARINE COMMUNICATIONS
		SUBHEAD
		52L0
<p>SHF/EHF HIGH DATA RATE SATELLITE COMMUNICATIONS ANTENNAS (L0087) - The Submarine HDR antenna will provide submarines with antennas that have the bandwidth, gain, and flexibility to meet the stated COMSUBLANT/COMSUBPAC requirements for HDR communications in the SHF and EHF frequency. RDT&E (N) Program Element - PE 0604503N pertains.</p> <p>TRIDENT SUBMARINE COMMUNICATIONS SUPPORT SYSTEM RADIO ROOM (SCSS) (L0089) - The Trident SCSS Radio Room will consist of an open system, multimedia, circuit sharing architecture that will serve as the shipboard automated communications control system. Procurement in this line is for the radio room communications racks, chassis, common power supplies and ancillary components required to integrate the ballistic missile submarine's communication equipment.</p> <p>SUBMARINE SHIP PC UPGRADE (L0094) - Funds procurement of PCs for submarines.</p> <p>EHF PERISCOPE MODIFICATIONS (L0095) - Funds procurement and installation of EHF periscope modification kits. The modifications will augment and enhance the communication capability of the HDR Follow-On Terminal contract award of March 1998.</p> <p>SUBMARINE SHORE PC UPGRADE (L0096) - Funds procurement of PCs for submarine shore facilities. Procurements start in FY01.</p> <p>SUBMARINE LAN (L0097) (Formerly Tactical Information Distribution System (TIDS)) - Will provide a connectivity layer that supports the achievement of an "End-to-End" capability for submarines crossing multiple classification enclaves. Sub LAN will provide significant improvement in data flow between subsystems within the submarine and off board enterprises. Sub LAN will enhance battle group connectivity, which increases awareness and interoperability, thus increasing battle readiness.</p> <p>DESIGN SERVICES ALLOCATION (DSA) (L0777) - Design work and engineering associated with ship alterations.</p>

Notes/Comments:

- Two (2) OE-538/BRC antennas comprise one installation on TRIDENT class submarines. This reduces the effective cost per installation in FY04, FY05 and TC.
- Six (6) OE-528/BRC units are assigned to a rotatable pool to accommodate equipment refurbishment and do not require installation funding. Pool assets are procured as follows: 5 in FY04, 1 in FY05.
- FY99 unit cost includes First Article System and testing (not separately priced).

BUDGET ITEM JUSTIFICATION SHEET										DATE February 2000	
APPROPRIATION/BUDGET ACTIVITY							P-1 ITEM NOMENCLATURE			SUBHEAD	
OP,N - BA2 COMMUNICATIONS & ELECTRONIC EQUIPMENT							314700 Submarine LF/VLF VME Receiver			52LF	
	PY	FY 1999	FY 2000	FY 2001	FY 2002	FY 2003	FY 2004	FY 2005	FY 2006	TO COMP	TOTAL
QUANTITY											
COST (in millions)		\$16.1									
<p>NOTE: Submarine LF/VLF VME Receiver (314700) transfers to the Submarine Broadcast Support Program (310700) in FY00. Detailed budget justification material for FY99 is included in the Submarine Broadcast Support Program for budget comparability.</p> <p>PROGRAM COVERAGE:</p> <p>The Submarine Low Frequency/Very Low Frequency (LF/VLF) VMEbus Receiver (SLVR) (LF001) is an open architecture hybrid radio receiver system that operates in the VLF/L frequency range (14 to 160 KHz). SLVR receives tactical and strategic messages and allows submarines to receive the messages while submerged. The SLVR design includes Commercial Off The Shelf (COTS), Non-Developmental Items (NDI) and custom components. The SLVR design maximizes the simplicity of implementing future technology upgrades through the incorporation of new generation VMEbus modules and Navy Standard and other available software to the maximum extent possible. The SLVR system replaces antiquated and limited capability LF/VLF receivers on TRIDENT and SSN (688/Seawolf/New Attack) submarines and at selected shore sites. It will receive U.S. and joint NATO LF/VLF tactical and strategic message traffic in support of Joint Strike, Surveillance, SEW/Intelligence, and Littoral Warfare mission areas, as well as the Strategic Deterrence mission area. SLVR P3I to be implemented includes noise reduction processing which increases the effectiveness of SLVR and is necessary to maintain capability with a reduced shore transmit infrastructure.</p> <p>JUSTIFICATION OF BUDGET YEAR REQUIREMENTS:</p> <p>SLVR (LF001) is a Mission Critical piece of C3I equipment onboard submarines and procurements are planned through FY01 to change out all the legacy shipboard systems. It replaces 20 - 30 year old technology limited VLF receiver systems and provides flexibility for change in addition to reductions in space and weight. This approach will modernize the existing systems to a standard design and eliminates the need for supporting numerous configurations of LF/VLF receiver systems, thus minimizing total cost of ownership/maintenance cost to the Fleet. To be successful the commercial components must be procured during the brief period of FY98 through FY01 to ensure a single generation of COTS is used for SLVR.</p>

OP,N - BA2 COMMUNICATIONS & ELECTRONIC EQUIPMENT								SATCOM Ship Terminals (Space)		321000 52NN	
	PY	FY 1999	FY 2000	FY 2001	FY 2002	FY 2003	FY 2004	FY 2005	TO COMP	TOTAL	
QUANTITY											
COST (in millions)	\$678.9	\$140.8	\$216.5								
<p>Note: SATCOM Ship Terminals transfers to the SATCOM Systems budget (BLI 3215) in FY 01. Detail budget justification material for PY through FY00 is included in the SATCOM Systems budget (BLI 3215) for budget comparability.</p> <p>PROGRAM COVERAGE: The Satellite Communications (SATCOM) Ship Terminals P-1 line provides funds for procurement of shipboard terminal equipment for ship-to-ship, ship-to-shore and ship-to-aircraft tactical communications via earth orbiting relay satellites in the ultra high frequency (UHF), super high frequency (SHF), and extremely high frequency (EHF) bands. This includes radio frequency (RF) equipment and baseband equipment assembled and grouped into systems and subsystems structured to address specific naval communications requirements. These systems provide processors and peripheral equipment that control the RF links for message traffic, direct data transfer and secure voice communications. They are selected and oriented by communications traffic levels, types of communications and operational missions. These procurements are scheduled to meet the satellite communications requirements established by the Chief of Naval Operations (CNO) in the Fleet Communications Planning and Programming documents. These programs are part of the Navy Satellite Communications Program (Navy SATCOM) to provide a communications architecture that will provide seamless, rapid and reliable switching and transfer of large volumes of information (voice, video, data or imagery).</p> <p>JUSTIFICATION OF BUDGET YEAR REQUIREMENTS:</p> <p>MINI-DAMA: Demand Assigned Multiple Access (DAMA) quadruples the UHF satellite channel capacity through multiplexing, thus providing adequate satellite access to meet the present user requirements without increasing the number of satellites in the constellation. The shipboard DAMA system consists of multiplexers, control monitor groups, and radios. Equipment will be installed on all SATCOM equipped ships during regular overhaul, restricted availability and by alteration installation teams (AIT). Mini-DAMA is the second phase of the UHF DAMA program. It provides a miniaturized version of the TD-1271B/U as well as incorporating UHF SATCOM and Line of sight (LOS) transceiver capability. Mini-DAMA also uses 5 kHz or 25 kHz satellite channels and can operate in DAMA or non-DAMA modes. The Mini-DAMA configuration was transitioned from MIL-SPEC to commercial open system architecture. The production variant will be delivered with either a one or a two channel configuration. The cost is essentially the same and references to quantities in this budget represent the number of channels, whether they are in one chassis or two. The standard submarine configuration requires two channels whether with one chassis or two.</p>											

BUDGET ITEM JUSTIFICATION SHEET (Continuation)		DATE
OP,N - BA2 COMMUNICATIONS & ELECTRONIC EQUIPMENT	P-1 ITEM NOMENCLATURE SATCOM Ship Terminals (Space)	February 2000 321000 52NN
<p>Special Intelligence Communications(SI COMMS): Sensitive Compartmented (SCI)Automated Digital Network System (ADNS) SCI ADNS has been designated as an evolutionary program allowing for continued growth and expansion paralleling technology changes. The SI COMMS and TACINTEL programs were combined into the SI COMMS architecture to replace the outdated TACINTEL system developed in the early 1970s. It provides the mechanism for phased implementation of both planned improvements and those which surface through advancing technology. SCI ADNS provides for the real-time exchange of SCI COMMS data to Afloat operational commanders. The cornerstone of this program is the versatility and growth potential of the processing and networking equipment which will provide the network centric communications for the SI community. The premise of using Commercial off-the-shelf (COTS), Government off-the-shelf (GOTS), non developmental items (NDI) and existing systems to meet the requirements for Special Intelligence Communications will continue to be followed. To realize the ADNS architecture, FY00 and FY01 funds will procure the SCI ADNS equipment necessary to implement the IT-21 architecture to provide SI Communications to the Fleet. Impact of no ship SCI COMMS is that the ability to detect, identify and prosecute hostile threats and provide warnings of grave danger to U.S. interests will be lost.</p> <p>5/25 KHz SATCOM: Numerous pieces of SATCOM terminal equipment are required to satisfy special communications needs. This line includes procurement of off-the-shelf non-developmental items (NDI) for replacement of obsolete satellite communications terminals and baseband equipment. These items meet the Joint Chief of Staff (JCS) MANDATE (CJCSI 6250.01) for fleet, DOD and allied interoperability. Current implementation of this requirement is being satisfied using the MD-1324A modem, which will be replaced with Digital Modular Radio (DMR). FY00 and FY01 funds continue the procurement of the COTS/NDI DMR as the main replacement for the non-JCS compliant AN/WSC-3 transceivers and TD-1271 multiplexer modems.</p> <p>EHF TERMINALS: This program provides for the acquisition of the Navy's EHF Satellite Communications Program (NESP) terminals in four semi-concurrent phases. Phase I of the NESP program provides Low Data Rate (LDR) jam resistant, low probability of intercept EHF SATCOM terminals for submarines, surface ships, and shore stations in the electromagnetic threat environment projected into the next decade. This requirement is contained in the NESP NDCP dated Apr 89 and the JROC validated Milstar ORD of Jun 92. There is a requirement to procure a total of 280 operational ship and sub terminals (OPN and SCN), plus five life cycle support systems already bought. This requirement was recently updated per the CNO ltr, Ser N631/8U556125 dated 11 Jun 98.</p> <p>Phase II of the NESP program procures Navy EHF Communications Controllers (NECCs), as part of the ADNS strategy to provide for the exchange of computer-to-computer tactical communications over the survivable EHF satellite links. NECC provides for network management; multiplexing and channel sharing; resource management; communications management and planning; network control and monitoring; and communications protocols such as circuit switching and packet switching. NECC requirements are outlined in the NESP NDCP dated Apr 89 and must be fully fielded with deploying battle groups and shore sites to support tactical information exchange over EHF SATCOM.</p>		

BUDGET ITEM JUSTIFICATION SHEET (Continuation)		DATE	February 2000
APPROPRIATION/BUDGET ACTIVITY	P-1 ITEM NOMENCLATURE	SUBHEAD	
OP,N - BA2 COMMUNICATIONS & ELECTRONIC EQUIPMENT	SATCOM Ship Terminals (Space)	321000	52NN
<p>Phase III of the NESP program provides for the procurement of Full Milstar LDR Operational Capabilities (FMLOC). FMLOC efforts include Agile Beam Management (ABM), Over-the-Air-Rekey (OTAR), and In-Band Control (IBC) capabilities required by the JROC validated Milstar ORD. Additionally, the Processor Upgrade Program (PUP) must be implemented to support the terminal throughput and memory requirements of the Phase III capabilities. All of these Phase III efforts will provide essential EHF operational communications capabilities with the current Milstar satellites. Similarly, IBCs will provide interoperable voice communications on all EHF satellites (Milstar, UHF Follow-On (UFO), and FLTSAT EHF Package (FEP)). Phase III also includes procurement of Interim Polar modification kits. An EHF polar communications capability is available using an EHF package on a classified host in the Molniya orbit. To use this polar capability, terminals will require minor modifications. In addition, shore gateways are necessary to provide connectivity from the Interim Polar satellite to other EHF satellite constellations.</p> <p>Phase IV of the NESP program consists of a Medium Data Rate (MDR) capability which will provide the only protected (jam resistant and low probability of intercept/detection) MDR communications from 4.8 kilobits per second (Kbps) to 1.544 megabits per second (Mbps) to all major fleet combatants with Milstar Satellites 3-6. To meet the Navy's requirement for MDR capable terminals, MDR appliquéés will be procured and retrofitted into existing LDR terminals and the balance of the requirements will be procured as part of the Follow-On Terminal contract award of 20 Mar 98. Follow-on terminals will also have Phase III FMLOC capabilities incorporated into their baseline. The requirement for MDR is outlined in the JROC validated Milstar ORD and must be fielded by FY 99 in order to support the launch schedule of the first Milstar II satellite. By OPNAV paper, Ser N631D/703-693-0024 dated 16 September, the Program Office was directed to accelerate the MDR upgrade program to meet fleet needs. Prior to receiving the MDR appliqué, existing NESP terminals must have Phase III upgrades due to the processing throughput and memory requirements of MDR.</p> <p>SHF SYSTEMS: The Navy has been expanding its use of SHF for communications in support of Navy Tactical and Joint Task Forge (JTF) Operating Forces Afloat through a phased implementation plan. In FY00 and FY01, the AN/WSC-6(V)2 and AN/WSC-6(V)4 are being modified to a standard AN/WSC-6(V)5 configuration to provide dual RG circuit and current technology controller capabilities to flag capable platforms and large combatants. The ultimate goal is to continue expanding the SHF SATCOM capability to other combatants, combat logistics force ships, and the mine countermeasures support ship, through a combination of modifications to existing production SATCOM terminals and provisioning of additional AN/WSC-6(V) terminal variants matched in capability to individual ship mission requirements. Also procured is ancillary hardware for the Automated Digital Multiplexing System (ADMS). Under the submarine high data rate (SUB HDR) program, the Navy is exploring the technical feasibility of DSCS support of wideband capabilities for attack submarines.</p>			

BUDGET ITEM JUSTIFICATION SHEET (Continuation)		DATE	February 2000
APPROPRIATION/BUDGET ACTIVITY	P-1 ITEM NOMENCLATURE		SUBHEAD
OP,N - BA2 COMMUNICATIONS & ELECTRONIC EQUIPMENT	SATCOM Ship Terminals (Space)	321000	52NN
<p>COMMERCIAL SATELLITES: Lessons learned from Desert Storm documented the necessity of an alternate commercial communications service for logistics and operational support requirements to reduce the saturation of communications on the military tactical satellites. ASD(C3I) in a letter of 8 Nov 1993, directed the use of commercial satellite (COMMERSAT) to augment current and future Military Satellite Communications (MILSATCOM) systems. This relieves the congestion on military tactical satellite communications systems while enhancing the overall Navy tactical communications capacity and reducing the competition with tactical data on the limited tactical satellite assets. The COMMERSAT program will use commercial off-the-shelf (COTS)/non-developmental item (NDI) equipment, software, and service with minimal adaptation for the naval environment. Variants of the commercially available INMARSAT terminals will be procured in the next few years. The various types are required to satisfy different requirements on flagships, aircraft carriers, amphib ships, combatants and auxiliary ships. The COMMERSAT Operational Requirements Document (ORD) mandates INMARSAT "M" terminals on Mine Counter-Measures ships. There will be INMARSAT "B" upgrades, and dual INMARSAT B upgrades to modify the earlier "A" INMARSAT terminals. FY00 and FY01 funds will continue procurement of C and Ku wide band SATCOM terminals for carriers and large deck amphibs components, supporting ancillary hardware related to Automated Digital Multiplexing System (ADMS) and INMARSAT terminals and high speed data (HSD) kits for network centric warfare on combatants.</p> <p>Global Broadcast Service (GBS): This is the Navy ship portion of the joint program with the Air Force as Executive Service. The GBS will augment other Military Satellite Communications (MILSATCOM) systems and provide a continuous, high speed, one way information flow of high volume data to units ashore, afloat or special operations. GBS will support routine operations, training and military exercises, special activities, crises, situational awareness, weapons targeting, reconnaissance and the transition to and conduct of opposed operations short of nuclear war. GBS will provide the capability of quickly disseminating large information products to various joint and small combat and combat support elements. FY00 and FY01 funds are a continuation to procure receiving equipment in various configurations customized to each type of ship for Phase II of the GBS program in support of UHF follow-on satellite launches numbers 8, 9, and 10. For ship and submarine procurements, antennas and ancillary equipment such as Asynchronous Transfer Mode (ATM) in-line encryptors will be procured through a SPAWAR contract. Shipboard and receive broadcast management equipment will be procured through an Air Force contract. An Operational Requirements Document (ORD) was signed on 30 April 97.</p> <p>INSTALLATION OF EQUIPMENT: This sub-line provides funding to shipyards and alteration installation teams (AIT) at Navy field activities for installation of equipment procured for ships and submarines.</p> <p>EXPLANATION OF PROGRAM CHANGE: N/A</p>

These procurements are scheduled to meet the satellite communications requirements established by the Chief of Naval Operations (CNO) in the Fleet Communications Planning and Programming documents. These programs are part of the Navy Satellite Communications Program (Navy SATCOM) to provide a communications architecture that will provide seamless, rapid and reliable switching and transfer of large volumes of information (voice, video, data or imagery).</p> <p>JUSTIFICATION OF BUDGET YEAR REQUIREMENTS: MINI-DAMA: Demand Assigned Multiple Access (DAMA) quadruples the UHF satellite channel capacity through multiplexing, thus providing adequate satellite access to meet the present user requirements without increasing the number of satellites in the constellation. The shipboard DAMA system consists of multiplexers, control monitor groups, and radios. Equipment will be installed on all SATCOM equipped ships during regular overhaul, restricted availability and by alteration installation teams (AIT). Mini-DAMA is the second phase of the UHF DAMA program. It provides a miniaturized version of the TD-1271B/U as well as incorporating UHF SATCOM and Line of sight (LOS) transceiver capability. Mini-DAMA also uses 5 kHz or 25 kHz satellite channels and can operate in DAMA or non-DAMA modes. The Mini-DAMA configuration was transitioned from MIL-SPEC to commercial open system architecture. The production variant will be delivered with either a one or a two channel configuration. The cost is essentially the same and references to quantities in this budget represent the number of channels, whether they are in one chassis or two. The standard submarine configuration requires two channels whether with one chassis or two. FY00 program procures and integrates Mini Dama Field Change Upgrade Kits aboard all SSN's and Minesweepers and selected DDG's and aircraft. FY00 program procures and integrates Mini Dama Field Change Upgrade Kits aboard all SSN's and Minesweepers and selected DDG's and aircraft.</p>											

BUDGET ITEM JUSTIFICATION SHEET (Continuation)		DATE	February 2000
APPROPRIATION/BUDGET ACTIVITY	P-1 ITEM NOMENCLATURE	SUBHEAD	
OP,N - BA2 COMMUNICATIONS & ELECTRONIC EQUIPMENT	Satellite Communications Systems	321500	52NR
<p>Special Intelligence Communications(SI COMMS): Sensitive Compartmented (SCI)Automated Digital Network System (ADNS) SCI ADNS has been designated as an evolutionary program allowing for continued growth and expansion paralleling technology changes. The SI COMMS and TACINTEL programs were combined into the SI COMMS architecture to replace the outdated TACINTEL system developed in the early 1970s. It provides the mechanism for phased implementation of both planned improvements and those which surface through advancing technology. SCI ADNS provides for the real-time exchange of SCI COMMS data to Afloat operational commanders. The cornerstone of this program is the versatility and growth potential of the processing and networking equipment which will provide the network centric communications for the SI community. The premise of using Commercial off-the-shelf (COTS), Government off-the-shelf (GOTS), non developmental items (NDI) and existing systems to meet the requirements for Special Intelligence Communications will continue to be followed. To realize the ADNS architecture, FY00 and FY01 funds will procure the SCI ADNS equipment necessary to implement the IT-21 architecture to provide SI Communications to the Fleet. Impact of no ship SCI COMMS is that the ability to detect, identify and prosecute hostile threats and provide warnings of grave danger to U.S. interests will be lost.</p> <p>The shore terminal interface for Sensitive Compartmented Information (SCI)/Automated Digital Network System (ADNS)/Tactical Intelligence Information Exchange (TACINTEL II+) will use commercial off-the-shelf (COTS), Government off-the-shelf (GOTS), Non-developmental items (NDI) and existing systems to meet the requirements for SI COMMS. The SI COMMS and TACINTEL programs were combined into the SI COMMS architecture to replace the outdated TACINTEL system developed in the early 1970s. The equipment also began the realization of the ADNS architecture. FY00 funds will continue to procure the SCI ADNS equipment necessary to implement the IT-21 architecture to provide SI COMMS to the Fleet. SCI ADNS provides for a real-time exchange of Tactical SCI COMMS to afloat operational commanders. Impact of no shore SCI ADNS is that ships cannot attain their network services.</p> <p>5/25 KHz SATCOM: Numerous pieces of SATCOM terminal equipment are required to satisfy special communications needs. This line includes procurement of off-the-shelf non-developmental items (NDI) for replacement of obsolete satellite communications terminals and baseband equipment. These items meet the Joint Chief of Staff (JCS) MANDATE (CJCSI 6250.01) for fleet, DOD and allied interoperability. Current implementation of this requirement is being satisfied using the MD-1324A modem, which will be replaced with Digital Modular Radio (DMR). FY00 funds continue the procurement of the COTS/NDI DMR as the main replacement for the non-JCS compliant AN/WSC-3 transceivers and TD-1271 multiplexer modems.</p> <p>SHF SYSTEMS: The Navy has been expanding its use of SHF for communications in support of Navy Tactical and Joint Task Forge (JTF) Operating Forces Afloat through a phased implementation plan. In FY00 and FY01, the AN/WSC-6(V)2 and AN/WSC-6(V)4 are being modified to a standard AN/WSC-6(V)5 configuration to provide dual RG circuit and current technology controller capabilities to flag capable platforms and large combatants. The ultimate goal is to continue expanding the SHF SATCOM capability to other combatants, combat logistics force ships, and the mine countermeasures support ship, through a combination of modifications to existing production SATCOM terminals and provisioning of additional AN/WSC-6(V) terminal variants matched in capability to individual ship mission requirements. Also procured is ancillary hardware for the Automated Digital Multiplexing System (ADMS). Under the submarine high data rate (SUB HDR) program, the Navy is exploring the technical feasibility of DSCS support of wideband capabilities for attack submarines.</p>			

BUDGET ITEM JUSTIFICATION SHEET (Continuation)		DATE	February 2000
APPROPRIATION/BUDGET ACTIVITY	P-1 ITEM NOMENCLATURE	SUBHEAD	
OP,N - BA2 COMMUNICATIONS & ELECTRONIC EQUIPMENT	Satellite Communications Systems	321500	52NR
<p>This line also provides SHF shore based equipment for high data rate communications with Fleet units via the Defense Satellite Communications Systems (DSCS). Shore based terminals have an operational requirement to support joint, theater and Navy unique command, control, communications, support and intelligence circuits for voice, data, video and imagery to the extent they are required on SHF platforms. FY01 - FY05 funds procure and install N-STEP/TELEPORT modems to provide shore side compatibility with SHF equipped ships and to support fleet and added Battle Group capacity requirements. Also procured is ancillary hardware for the Automated Digital Multiplexing System (ADMS). NDCP dated Apr 89 and must be fully fielded with deploying battle groups and shore sites to support tactical information exchange over EHF SATCOM.</p> <p>EHF TERMINALS: This program provides for the acquisition of the Navy's EHF Satellite Communications Program (NESP) terminals in four semi-concurrent phases. Phase I of the NESP program provides Low Data Rate (LDR) jam resistant, low probability of intercept EHF SATCOM terminals for submarines, surface ships, and shore stations in the electromagnetic threat environment projected into the next decade. This requirement is contained in the NESP NDCP dated Apr 89 and the JROC validated Milstar ORD of Jun 92. There is a requirement to procure a total of 280 operational ship and sub terminals (OPN and SCN), plus five life cycle support systems already bought. This requirement was recently updated per the CNO ltr, Ser N631/8U556125 dated 11 Jun 98.</p> <p>Phase II of the NESP program procures Navy EHF Communications Controllers (NECCs), as part of the ADNS strategy to provide for the exchange of computer-to-computer tactical communications over the survivable EHF satellite links. NECC provides for network management; multiplexing and channel sharing; resource management; communications management and planning; network control and monitoring; and communications protocols such as circuit switching and packet switching. NECC requirements are outlined in the NESP NDCP dated Apr 89 and must be fully fielded with deploying battle groups and shore sites to support tactical information exchange over EHF SATCOM.</p> <p>Phase III of the NESP program provides for the procurement of Full Milstar LDR Operational Capabilities (FMLOC). FMLOC efforts include Agile Beam Management (ABM), Over-the-Air-Rekey (OTAR), and In-Band Control (IBC) capabilities required by the JROC validated Milstar ORD. Additionally, the Processor Upgrade Program (PUP) must be implemented to support the terminal throughput and memory requirements of the Phase III capabilities. All of these Phase III efforts will provide essential EHF operational communications capabilities with the current Milstar satellites. Similarly, IBCs will provide interoperable voice communications on all EHF satellites (Milstar, UHF Follow-On (UFO), and FLTSAT EHF Package (FEP)). Phase III also includes procurement of Interim Polar modification kits. An EHF polar communications capability is available using an EHF package on a classified host in the Molniya orbit. To use this polar capability, terminals will require minor modifications. In addition, shore gateways are necessary to provide connectivity from the Interim Polar satellite to other EHF satellite constellations.</p>

BUDGET ITEM JUSTIFICATION SHEET (Continuation)		DATE
APPROPRIATION/BUDGET ACTIVITY	P-1 ITEM NOMENCLATURE	SUBHEAD
OP,N - BA2 COMMUNICATIONS & ELECTRONIC EQUIPMENT	Satellite Communications Systems	321500 52NR
<p>EHF TERMINALS (cont.): Phase IV of the NESP program consists of a Medium Data Rate (MDR) capability which will provide the only protected (jam resistant and low probability of intercept/detection) MDR communications from 4.8 kilobits per second (Kbps) to 1.544 megabits per second (Mbps) to all major fleet combatants with Milstar Satellites 3-6. To meet the Navy's requirement for MDR capable terminals, MDR appliques will be procured and retrofitted into existing LDR terminals and the balance of the requirements will be procured as part of the Follow-On Terminal contract award of 20 Mar 98. Follow-on terminals will also have Phase III FMLOC capabilities incorporated into their baseline. The requirement for MDR is outlined in the JROC validated Milstar ORD. By OPNAV paper, Ser N631D/703-693-0024 dated 16 September, the Program Office was directed to accelerate the MDR upgrade program to meet fleet needs. Prior to receiving the MDR applique, existing NESP terminals must have Phase III upgrades due to the processing throughput and memory requirements of MDR.</p> <p>The Follow-on Terminal (FOT) will incorporate the Low Data Rate (LDR)/Medium Data Rate (MDR) capabilities into a consolidated terminal that provides the same EHF functionality as an LDR terminal with an MDR applique. The FOT does not change the LDR/MDR performance envelope. The first article FOT production unit was procured in FY98 and delivered to the Government in August 1999 as noted in the President's Budget of February 1999. An acquisition decision was made in January 2000 to procure the remaining terminal requirement with FOT.</p> <p>COMMERCIAL SATELLITES: Lessons learned from Desert Storm documented the necessity of an alternate commercial communications service for logistics and operational support requirements to reduce the saturation of communications on the military tactical satellites. ASD(C3I) in a letter of 8 Nov 1993, directed the use of commercial satellite (COMMERSAT) to augment current and future Military Satellite Communications (MILSATCOM) systems. This relieves the congestion on military tactical satellite communications systems while enhancing the overall Navy tactical communications capacity and reducing the competition with tactical data on the limited tactical satellite assets. The COMMERSAT program will use commercial off-the-shelf (COTS)/non-developmental item (NDI) equipment, software, and service with minimal adaptation for the naval environment. Variants of the commercially available INMARSAT terminals will be procured in the next few years. The various types are required to satisfy different requirements on flagships, aircraft carriers, amphib ships, combatants and auxiliary ships. The COMMERSAT Operational Requirements Document (ORD) mandates INMARSAT "M" terminals on Mine Counter-Measures ships. There will be INMARSAT "B" upgrades, and dual INMARSAT B upgrades to modify the earlier "A" INMARSAT terminals. FY00 and FY01 funds will continue procurement of C and Ku wide band SATCOM terminals for carriers and large deck amphibs components, supporting ancillary hardware related to Automated Digital Multiplexing System (ADMS) and INMARSAT terminals and high speed data (HSD) kits for network centric warfare on combatants.</p> <p>Global Broadcast Service (GBS): This is the Navy portion of the joint program with the Air Force as Executive Service. The GBS will augment other Military Satellite Communications (MILSATCOM) systems and provide a continuous, high speed, one way information flow of high volume data to units ashore, afloat or special operations. GBS will support routine operations, training and military exercises, special activities, crises, situational awareness, weapons targeting, reconnaissance and the transition to and conduct of opposed operations short of nuclear war. GBS will provide the capability of quickly disseminating large information products to various joint and small combat and combat support elements. FY00 and FY01 funds are a continuation to procure receiving equipment in various configurations customized to each type of ship for Phase II of the GBS program in support of UHF follow-on satellite launches numbers 8, 9, and 10. For ship and submarine procurements, antennas and ancillary equipment such as Asynchronous Transfer Mode (ATM) in-line encryptors will be procured through a SPAWAR contract. Shipboard receive suites broadcast management equipment will be procured through an Air Force contract. FY00 and FY01 continues procurement of shore site terminals at NCTAMS/MOC/MAC/MICFAC, CINC, SPAWAR and other Navy locations. In the shore GBS terminal, components will be procured from the GBS Joint Program Office (Air Force) contract and include the GBS antenna and receiver, and transportable terminals. A Mission Need Statement for GBS was signed, 3 AUG 1995, and an Operational Requirements Document (ORD) was signed on 30 April 97.</p>

<p>JMINI Control System: The Joint ultra high frequency (UHF) Military Satellite Communications Network Integrated Control System (JMINI) is a joint interest program with the Navy designated as the lead service as directed by the Military Communications Electronics Board (MCEB). The JMINI Control System will provide dynamic centralized control of joint 5-kHz and 25-kHz UHF military satellite communications (MILSATCOM) voice and data resources (channels and Time Division Multiple Access (TDMA) time slots) via a globally integrated system of four control stations to be located at each of the three Naval Computer and Telecommunications Area Master Station (NCTAMS) sites plus Naval Computer and Telecommunications Station (NCTS) Guam. The globally integrated system consists of two major subsystems. The first subsystem provides communications resource planning and management via secure Wide Area Network (WAN) connections between the control stations and remote users and is known as the Network Management System (NMS). A total of 14 NMS units are required, one at each control station plus ten remote units to be installed at ORD-defined locations. The second subsystem provides the RF connectivity (modems, radios, antennas) between the NMS and the UHF MILSATCOM user terminals worldwide and is known as the Channel Controller. There are 156 channel controllers required per control station. Funds in FY99 begin procurement of the Digital Modular Radio (DMR), which serves as the JMINI Control System Channel Controller and procures the first two control station NMS units. Funds in FY00 continue procurement of the DMR channel controller hardware and the other two control station NMS units and begin installation of the system. Funds in FY01 continue procurement and installation of the channel controller hardware for the four control station plus begin procurement of the remote NMS units.</p>

Remarks:
 This program now includes OPN P-1 Line Item SATCOM Shore Terminals (BLI 3220) beginning in FY01. FY99 & FY00 detail information is provided for budget comparability.
 NN103 SCI ADNS unit cost is based on average cost. Variances are due to the diverse type of ship system configurations.
 NP103 SCI ADNS - Unit cost is based on average cost. Variances are due to the diverse type of shore system configurations.
 NN106 C/X - FY00 unit cost is higher than the following years due to award fees/non-recurring expenses (NRE).
 NN106 C/X: Due to DT/OT on FY00 terminal, additional terminals will not be procured until full rate of production is approved.
 NP108 SHF Terminals - FY98 requirement of \$255K was provided to procure one radome for the AN/GSC-52 antenna at Navy Site 10. \$455K is provided for installation of SHF DSCS terminal at Navy Site 10.
 NP108 SHF Terminals - FY99 and FY01 unit costs vary due to type of equipment. FY99 items are Kosovo FCC-100s; FY01 and out purchases N-STEP modems.
 NP108 SHF Terminals - AN/WSC-6(V)7 PY cost is for a singular antenna radome procurement.
 NP108 SHF Terminals - Modems for FY01 - FY04 are provided by a PR-01 plus-up. No funding is available in FY00.
 NN107 EHF Terminals -AN/USC-38(V) FY99 funds are provided for Follow-On Terminal (FOT) Technical Data Packages, Remote Terminal Control Units (3 ea), Full MILSTAR Low Data Rate Operational Capabilities (FMLOC) (23 Processor Upgrades), and Production Support.
 NP109 EHF Terminals - AN/USC-38(V) FY99 - FY99 unit cost reflects procurement of Single Channel Anti-Jam Man Portables (SCAMPS) for SPECWAR use.
 NN107/NN109 EHF Terminals - MDR FY00 funds provide MDR satellite simulators, maintainer and operator trainer, field change kits, and ancillary equipment.
 NN107/NN109 EHF Terminals - MDR FY01 funds provide field change kits, and ancillary equipment.
 NN107/NN109 EHF Terminals - NECC Unit cost includes addition of MDR capability beginning in FY99.
 NN107/NN109 EHF Terminals - The Follow-on Terminal (FOT) will incorporate the Low Data Rate (LDR)/Medium Data Rate (MDR) capabilities into a consolidated terminal that provides the same EHF functionality as an LDR terminal with an MDR applique.
 The FOT does not change the LDR/MDR performance envelope. The first article FOT production unit was procured in FY98 and delivered to the Government in August 1999.

Remarks:

NN112 C-Band - Unit cost lower in FY00 due to upgrades

NN117 GBS - Unit cost varies due to quantity discounts afforded by other Services buys per year.

NN117 GBS - FY98 unit costs reflect procurement of 4 Single Receive Suites; as well as 2 Single Antenna Systems, 8 Dual Antenna Systems and Cryptologic Equipment. Additional terminal and antenna quantity buys were procured with FY98 AF RDTE (GBS JPO) funds.

NN117 GBS - FY99 procurement quantity of 8 was reduced to 7 due to a more expensive ground system being bought.

NN117 GBS - FY99 unit costs reflect 22 upgrade kits (\$1.174M) which were procured in that year.

NN117 GBS - FY00 incurred cost to modify antenna system to be RCS compliant.

NN117 GBS - Estimated full rate production is 4/01 as a result of FOT&E slip..

D. REMARKS

FY97 - FY01 EHF Terminal - AN/USC-38(V) includes Full Milstar Low Data Rate Operational Capability (FMLOC).
 NN107 EHF Terminals - MDR Unit cost includes procurement of MDR upgrade antennas in FY00 - FY03
 NN112 C-Band FY00 unit costs are lower because 8 of the 11 units procured are upgrades.

D. REMARKS

NN117 GBS- Unit cost varies due to quantity discounts afforded by other Services buys per year.
 NN117 GBS- Additionally, unit cost reflects variances in the composite quantities of different equipment types procured each FY which is driven by IT-21 Fleet requirements.

COST CODE	ELEMENT OF COST	FY	CONTRACTOR AND LOCATION	CONTRACT METHOD & TYPE	LOCATION OF PCO	RFP ISSUE DATE	AWARD DATE	DATE OF FIRST	QTY	UNIT COST	SPECS AVAILABLE NOW	DATE REVISIONS AVAILABLE		
NP118	JMINI Control System - NMS (FY99/00)	99	SAIC, San Diego, CA	IDIQ	SPAWAR		Oct-98	Jul-99	2	6166	Yes			
		00	SAIC, San Diego, CA	IDIQ	SPAWAR		Oct-99	Jul-00	4	3892.75	Yes			
NN118	JMINI Control System - NMS (FY01)	01	SAIC, San Diego, CA	IDIQ	SPAWAR		Oct-00	Jul-01	1	1505	Yes			
NP118	JMINI Control System - DMR (FY99/00)	99	Motorola, Phoenix, AZ	FFP/IDIQ	SPAWAR		Jan-00	Sep-00	260	121.81	Yes			
		00	Motorola, Phoenix, AZ	FFP/IDIQ	SPAWAR		Aug-00	May-01	100	114.74	Yes			

NMS unit costs for FY 99 & FY 00 are greater than FY 01 due to the fact that the bulk of NMS funding is dedicated to the complex software enhancement and integration work required to reach IOC at the four primary JMINI Control Stations in FY 00. OPN funding (and unit costs) decrease in FY 01 and out as the program focus shifts to the less complex implementation of the Remote JMINI Control Stations

MODIFICATION TITLE: Satellite Communications Systems 321500
 COST CODE: NN101
 MODELS OF SYSTEMS AFFECTED: **MINI DAMA**
 DESCRIPTION/JUSTIFICATION: Provides 5KHz and 25KHz UHF Communications capability for submarines and other disadvantaged users.

Notes/Comments

Quantities represent number of channels regardless of single or dual channel units.

1/ This represents Total Inventory objective

SPAWAR's TITAN Contract ends Sep-99, due to 12 month procurement lead time, FY99 funds will be obligated in FY99 and installation will begin when equipment is delivered.

2/ The FY00 program procures Field Change Upgrade Kits. Units do not require installation.

Notes/Comments
 Due to funding cuts to support Bosnia efforts, 3 FY 98 installs moved to FY 99.
 Due to cuts to fund TRITAC program 2 FY 99 installs moved to FY 00.
 Based on latest IT21 Matrix, installation costs will vary due to different requirements for different hulls.
 Installation unit costs vary due to varying ship class installs

Notes/Comments

FY99 modems represent FCC-100 modems for the SHF program.
 FY01 - FY04 procurements represent N-Step/Teleport Shore Modems.
 Modems required for shore side compatibility with AN/WSC-6(V)5 and AN/WSC-6(V)7 equipped ships and support Battle Group capacity added by the two programs.
 Modems for FY01 - FY04 are provided by a PR-01 plus-up. No funding is available in FY00.

Notes/Comments

FY99 cost reflect procurement of 13 Single Channel Anti-Jam Man Portables (SCAMPS). Units do not require installation; however, they are included in the production schedule.
 FY99 - FY01 unit cost includes procurement of Full Milstar Low Data Rate Operational Capability (FMLOC).
 FY00 FOT Production Year 1 award.
 FY00 - Includes early delivery of two assets to support initial schoolhouse training.
 FY05 - AN/USC-38(V) includes Advanced MILSATCOM EHF compatibility & joint baseband compatibility.

MODIFICATION TITLE: Satellite Communications Systems

Notes/Comments

FY98 unit cost reflects procurement of MDR Appliques only.
 FY99 - FY01 unit cost includes procurement of MDR upgrade antennas.
 MDR functionality incorporated in AN/USC-38(V).

OP,N - BA2 COMMUNICATIONS & ELECTRONIC EQUIPMENT								SATCOM Shore Terminals (Space)			322000 52NP	
	PY	FY 1999	FY 2000	FY 2001	FY 2002	FY 2003	FY 2004	FY 2005	TO COMP	TOTAL		
QUANTITY												
COST (in millions)	\$132.7	\$65.1	\$65.3									
<p>Note: SATCOM Shore Terminals transfers to the SATCOM Systems budget (BLI 3215) in FY 01. Detail budget justification material for PY through FY00 is included in the SATCOM Systems budget (BLI 3215) for budget comparability.</p> <p>PROGRAM COVERAGE: The Satellite Communications (SATCOM) Shore Terminals P-1 line provides funds for procurement of shore based equipment for shore-to-shore and shore-to-ship tactical communications via earth orbiting relay satellites operating in the Ultra High Frequency (UHF), Super High Frequency (SHF), and Extremely High Frequency (EHF) bands. This includes Radio Frequency (RF) equipment and baseband equipment assembled and grouped into systems and subsystems structured to address specific Naval communications requirements. These systems provide processors and peripheral equipment that control the RF link for message traffic, direct data transfer and secure voice communications. They are selected and oriented by communications traffic levels, types of communications and operational missions. These shore terminals provide the satellite communications interface between the at-sea fleet and the shore establishment communication network and are an integral part of the Navy Satellite Communications Program.</p> <p>JUSTIFICATION OF BUDGET YEAR REQUIREMENTS:</p> <p>Special Intelligence Communications (SI COMMS): The shore terminal interface for Sensitive Compartmented Information (SCI)/Automated Digital Network System (ADNS)/Tactical Intelligence Information Exchange (TACINTEL II+) will use commercial off-the-shelf (COTS), Government off-the-shelf (GOTS), Non-developmental items (NDI) and existing systems to meet the requirements for SI COMMS. The SI COMMS and TACINTEL programs were combined into the SI COMMS architecture to replace the outdated TACINTEL system developed in the early 1970s. The equipment also began the realization of the ADNS architecture. FY00 funds will continue to procure the SCI ADNS equipment necessary to implement the IT-21 architecture to provide SI COMMS to the Fleet. SCI ADNS provides for a real-time exchange of Tactical SCI COMMS to afloat operational commanders. Impact of no shore SCI ADNS is that ships cannot attain their network services.</p>												

BUDGET ITEM JUSTIFICATION SHEET (Continuation)		DATE
APPROPRIATION/BUDGET ACTIVITY		DATE
OP,N - BA2 COMMUNICATIONS & ELECTRONIC EQUIPMENT	P-1 ITEM NOMENCLATURE	February 2000
	SATCOM Shore Terminals (Space)	322000 52NP
<p>SHF Terminals: This line provides SHF shore based equipment for high data rate communications with Fleet units via the Defense Satellite Communications Systems (DSCS). Shore based terminals have an operational requirement to support joint, theater and Navy unique command, control, communications, support and intelligence circuits for voice, data, video and imagery to the extent they are required on SHF platforms. FY01 - FY05 funds procure and install N-STEP/TELEPORT modems to provide shore side compatibility with SHF equipped ships and to support fleet and added Battle Group capacity requirements. Also procured is ancillary hardware for the Automated Digital Multiplexing System (ADMS). Under the submarine high data rate (SUB-HDR) program, the Navy is exploring the technical feasibility of DSCS support of wideband capabilities for attack submarines.</p> <p>EHF Terminals: This program provides for the acquisition of the Navy's EHF Satellite Communications Program (NESP) terminals in four semi-concurrent phases. Phase I of the NESP program provides Low Data Rate (LDR) jam resistant, low probability of intercept EHF SATCOM terminals for submarines, surface ships, and shore stations in the electromagnetic threat environment projected into the next decade. This requirement is contained in the NESP NDCP dated Apr 89 and the JROC validated Milstar ORD of Jun 92. There is a requirement to procure a total of 43 operational shore terminals, four transportable terminals, thirteen SCAMPs (Several Channel Anti-jam Man Pack) to provide multi-channel portable communications, and ten trainers. This requirement was recently updated per the CNO ltr, Ser N631/8U556125 dated 11 Jun 98.</p> <p>Phase II of the NESP program procures Navy EHF Communications Controllers (NECCs), as part of the ADNS strategy to provide for the exchange of computer-to-computer tactical communications over the survivable EHF satellite links. NECC provides for network management; multiplexing and channel sharing; resource management; communications management and planning; network control and monitoring; and communications protocols such as circuit switching and packet switching. NECC requirements are outlined in the NESP NDCP dated Apr 89 and must be fully fielded with deploying battle groups and shore sites to support tactical information exchange over EHF SATCOM.</p> <p>Phase III of the NESP program provides for the procurement of Full Milstar LDR Operational Capabilities (FMLOC). FMLOC efforts include Agile Beam Management (ABM), Over-the-Air-Rekey (OTAR), and In-Band Control (IBC) capabilities required by the JROC validated Milstar ORD. Additionally, the Processor Upgrade Program (PUP) must be implemented to support the terminal throughput and memory requirements of the Phase III capabilities. All of these Phase III efforts will provide essential EHF operational communications capabilities with the current Milstar satellites. Similarly, IBCs will provide interoperable voice communications on all EHF satellites (Milstar, UHF Follow-On (UFO), and FLTSAT EHF Package (FEP)). Phase III also includes procurement of Interim Polar modification kits. An EHF polar communications capability is available using an EHF package on a classified host in the Molniya orbit. To use this polar capability, terminals will require minor modifications. In addition, shore gateways are necessary to provide connectivity from the Interim Polar satellite to other EHF satellite constellations.</p> <p>Phase IV of the NESP program consists of a Medium Data Rate (MDR) capability which will provide the only protected (jam resistant and low probability of intercept/detection) MDR communications from 4.8 kilobits per second (Kbps) to 1.544 megabits per second (Mbps) to all major fleet combatants with Milstar Satellites 3-6. To meet the Navy's requirement for MDR capable terminals, MDR appliques will be procured and retrofitted into existing LDR terminals and the balance of the requirements will be procured as part of the Follow-On Terminal contract award of 20 Mar 98. Follow-on terminals will also have Phase III FMLOC capabilities incorporated into their baseline. The requirement for MDR is outlined in the JROC validated Milstar ORD and must be fielded by FY 99 in order to support the launch schedule of the first Milstar II satellite. By OPNAV paper, Ser N631D/703-693-0024 dated 16 September, the Program Office was directed to accelerate the MDR upgrade program to meet fleet needs. Prior to receiving the MDR appliqué, existing NESP terminals must have Phase III upgrades due to the processing throughput and memory requirements of MDR.</p> <p>FY 99 funds will be used to continue procurement of MDR retrofit appliques, SCAMPs, NECCs and FMLOC equipment. The procurement of MDR retrofit appliques, NECCs, FMLOC, will continue in FY00 and FY01. FY 00 funds will also be used to begin procurement of Follow-On Terminals and continue into FY01.</p>		

BUDGET ITEM JUSTIFICATION SHEET (Continuation)		DATE	February 2000
APPROPRIATION/BUDGET ACTIVITY	P-1 ITEM NOMENCLATURE	SUBHEAD	
OP,N - BA2 COMMUNICATIONS & ELECTRONIC EQUIPMENT	SATCOM Shore Terminals (Space)	322000	52NP
<p>Global Broadcast Service: This is the Navy shore portion of the joint program with the Air Force as Executive Service. The GBS will augment other Military Satellite Communications (MILSATCOM) systems and provide a continuous , high speed , one way information flow of high volume data to units ashore, afloat or special operations. GBS will support routine operations, training and military exercises, special activities, crises, situational awareness, weapons targeting, reconnaissance and the transition to and conduct of opposed operations short of nuclear war. GBS shore terminals will provide the capability of quick dissemination of large information products to various Navy fixed sites and small combat and combat support elements. FY00 and FY01 continues procurement of shore site terminals at NCTAMS/MOC/MAC/MICFAC, CINC, SPAWAR and other Navy locations.. In the shore GBS terminal, components will be procured from the GBS Joint Program Office (Air Force) contract and include the GBS antenna and receiver, and transportable terminals. A Mission Need Statement for GBS was signed, 3 AUG 1995, and a Joint Operational Requirements Document (JORD) was signed 7 April 1997. For shore procurements, antennas and ancillary equipment such as Asynchronous Transfer Mode (ATM) in-line encryptors will be procured.</p> <p>JMINI Control System: The Joint ultra high frequency (UHF) Military Satellite Communications Network Integrated Control System (JMINI) is a joint interest program with the Navy designated as the lead service as directed by the Military Communications Electronics Board (MCEB). The JMINI Control System will provide dynamic centralized control of joint 5-kHz and 25-kHz UHF military satellite communications (MILSATCOM) voice and data resources (channels and Time Division Multiple Access (TDMA) time slots) via a globally integrated system of four control stations to be located at each of the three Naval Computer and Telecommunications Area Master Station (NCTAMS) sites plus Naval Computer and Telecommunications Station (NCTS) Guam. The globally integrated system consists of two major subsystems. The first subsystem provides communications resource planning and management via secure Wide Area Network (WAN) connections between the control stations and remote users and is known as the Network Management System (NMS). A total of 14 NMS units are required, one at each control station plus ten remote units to be installed at ORD-defined locations. The second subsystem provides the RF connectivity (modems, radios, antennas) between the NMS and the UHF MILSATCOM user terminals worldwide and is known as the Channel Controller. There are 156 channel controllers required per control station. Funds in FY99 begin procurement of the Digital Modular Radio (DMR), which serves as the JMINI Control System Channel Controller and procures the first two control station NMS units. Funds in FY00 continue procurement of the DMR channel controller hardware and the other two control station NMS units and begin installation of the system. Funds in FY01 continue procurement and installation of the channel controller hardware for the four control station plus begin procurement of the remote NMS units.</p> <p>INSTALLATION AGENT: Various</p>

<p>PROGRAM COVERAGE/JUSTIFICATION FOR BUDGET YEAR REQUIREMENTS: The Navy Standard Integrated Personnel System (NSIPS) is a special-interest, major Automated Information System (AIS) to collect, process and distribute personnel and pay data within Navy and to various corporate level activities within DoD. NSIPS will achieve the integration of active, reserve, and retired military personnel systems within the Navy, improve the military personnel tracking process, consolidate processes and systems within life cycle areas of military personnel, and the functionality of existing Navy source data collection requirements. NSIPS will operate on shore and afloat servers, client workstations, stand-alone workstations, portable stand-alone workstations, LANs and miscellaneous hardware and will maintain regional data warehouses as well as an all-Navy archival data warehouse.</p> <p>Systems Management Center (SMC) Facility provides the means for end-to-end management of all information technology (IT) assets. The facility will provide for the correlation and reporting of information about software and hardware events to system administrative and other appropriate support personnel, and execute system corrections and policy changes issued by administrative and support personnel. SMC Facility provides a common repository of system information, a user interface that will be used to manage and monitor Department of Defense (DoD), Department of Navy (DoN), and Commander, Naval Reserve Force (COMNAVRESFOR) IT assets. The SMC Facility provides an oversight capability into workstation and remote server configuration, and a method for updating operating system and applications to maintain software currency and configuration standardization.</p> <p>FY 1999 through 2001 NSIPS funding is for hardware and software at all reserve sites and PSDs supporting reserve sites.</p> <p>FY 2000 SMC funding is for additional software and hardware (workstations, headquarters and field servers, etc.) to facilitate automated, distributed software delivery, asset management, and server performance monitoring to include NSIPS and COMNAVRESFOR field sites.</p>

<p>*Note: All previous procurement budgets for this item were submitted from the Project Management Function from the Naval Supply Systems Command (NAVSUP). CNO letter dated 21 Dec 98 transferred the JEDMICS Project Office to the Naval Air Systems Command (NAVAIR) beginning 1 January 99.</p> <p>JEDMICS is the Joint DoD system for permanently storing, managing and controlling digital engineering drawings and associated technical data. The JEDMICS System replaced labor intensive, inefficient manual and semi-automated technical repositories with automated central repositories for all engineering and manufacturing information on ships, aircraft and electronics. This information is used by the fleet shore establishment and industry in support of spares acquisition, equipment maintenance, and modernization and preparation of technical publications. The JEDMICS system is deployed at 31 interoperable sites that service 600 locations worldwide. As of April 1999, JEDMICS manages and controls 72,000,000 engineering images and has 35,000 authorized users responsible for over 70,000 user sessions per month. On average 1,500,000 digital images are retrieved each month. The effective utilization of JEDMICS by the contractor and Government communities will require secure network access and adequate security for all data stored within the repository.</p> <p>FY99 funding will be used to continue the effort begun in FY98 for the acquisition and installation of a JEDMICS WAN "Security Solution". The FY99 funds will also be used for the certification and integration of this solution.</p> <p>FY00 funding will be used for two complimentary efforts. First, \$12.0M will be used to expand the existing JEDMICS WAN "Security Solution" IAW Congressional direction. Three sites will receive enhanced "security solutions" including technical data packages defining access and additional Diamond NIC Secure Network Interface cards. The remaining \$5.0M will be used to enhance the JEDMICS systems' interface making it accessible to all authorized web users using open interface standards compatible with commercial Product Data Management Tools and Product Data Mark-Up Language (PDML).</p>

<p>NOTE: GCCS transfers to theGCCS-M BLI 2608 in FY00. Detail budget justification material for FY99 is included in the GCCS-M P-1 for budget comparability.</p> <p>PROGRAM COVERAGE:</p> <p>This line item contains equipment to support the Global Command and Control System (GCCS). GCCS is an operational multi-service/agency C3 program encompassing both strategic and tactical C3 functions. GCCS supports the National Command Authority (NCA) and the CINCs by providing Command, Control and Communication (C3) data processing capabilities, including status of forces and support requirements for use in national security decision making, force preparation and operational planning execution. The Navy's procurement provides equipment to support the GCCS Automated Data Processing Equipment (ADPE) configuration at USACOM , USPACOM, CINCLANTFLT, CINCPACFLT, CNO/NCC, CINCUSNAVEUR, NAVCENTCOM, US FORCES JAPAN, and their remote user sites.</p> <p>JUSTIFICATION OF BUDGET YEAR REQUIREMENTS:</p> <p>All procurements will directly support Navy GCCS and is in accordance with Joint Staff direction. GCCS consists of standard hardware, standard software, and service/site unique software. GCCS is an open systems client-server environment using COTS and NDI software and hardware and service/site unique software. Procurements will include Intelligent Workstations to replace obsolete terminals, Servers, Local Area Network (LAN) hardware and software and communications equipment.</p> <p>INSTALLATION DATA: All equipment is scheduled for installation at Navy supported GCCS shore sites.</p> <p>FY 99 funds provided Intelligent Workstations, Servers LAN hardware and software, communications equipment, as well as Non-FMP installations for equipment installations.</p>

OP,N - BA2 COMMUNICATIONS & ELECTRONIC EQUIPMENT						336800 NAVAL SHORE COMMUNICATIONS		52D6		
	PY	FY 1999	FY 2000	FY 2001	FY 2002	FY 2003	FY 2004	FY 2005	TO COMP	TOTAL
QUANTITY										
COST (in millions)		\$105.8	\$118.4	\$176.1	\$120.8	\$151.6	\$155.0	\$198.3	Continuing	Continuing
<p>PROGRAM COVERAGE: The Naval Shore Communications program procures and installs communications equipment at shore stations. The equipment upgrades and/or replaces existing systems that are inadequate in mission performance due to obsolescence or cost-prohibitive maintenance. New equipment is predominately non-developmental items (NDI)/ commercial off the shelf (COTS) and provides maximum automated capabilities to accommodate remote control systems from unmanned or minimally manned locations.</p> <p>(1) Information Exchange Systems (D6001): The purpose of the information exchange systems is to provide a transparent, completely automated, interoperable, and integrated shore communications environment which will expedite an orderly transition to Global Grid. Information exchange systems will result in increased throughput via faster system processing speeds and more capable end terminal devices. Additionally, Information Exchange Systems will accomplish more efficient upgrades through the use of modularity and backward-compatible technology applications. Information Exchange Systems consists of the Defense Messaging System (DMS) and Technical Control Upgrade (TCU). Beginning in FY00 Information Exchange consists only of the Defense Messaging System. Technical Control Upgrade (TCU) funding is transferred to BLI 3050 (Subhead 52PQ).</p> <p>Defense Messaging System: DMS will replace the present AUTODIN/TCC message delivery architecture with a single messaging system with seamless strategic (ashore) and tactical (afloat) interoperability. The tactical portion of DMS is funded in BLI 3050 (Subhead 52PQ cost code PQ065 and PQ777 NAVMACS/SMS). The DMS program provides for the planning, analysis, procurement, integration, implementation, and installation of the DMS components at all DON, USMC, and USCG activities.</p> <p>Technical Control Upgrade: TCU provides for the shore segment interconnect of an end-to-end dynamic bandwidth management, Internet Protocol, and Channel Access Protocol capability to deploying Battle Groups/Amphibious Ready Groups, and other support units. TCU Automates the major shore nodes which allow network centric and lights-out operations. TCU (which includes Automated Network Control Center (ANCC), and Automated Technical Control (ATC)) is the key enabling mechanism for the execution of the Joint Maritime Communications System (JMCOMS)/Automated Digital Network System (ADNS) strategy which is essential to meeting the IT-21 vision.¹</p> <p>(2) Transmission Systems (D6002): Transmission Systems projects provide a broad range of Navy shore communications enhancements. As the Defense Communications System (DCS) backbone evolves toward a totally digital environment, Navy transmission systems must be upgraded, modified, and replaced with digital systems. Transmission Systems consists of the Shore Remote Control System (SRCS), the Automated Digital Multiplexer System (ADMS) and Terrestrial Connectivity (TC).</p> <p>Shore Remote Control Systems/Element Management System (SRCS/EMS): SRCS automates and remotely controls communications, switching and quality monitoring equipment which eliminates manual operations. EMS provides operator controlled automatic configuration of the Radio Communications System (RCS) circuits, computerized communications plan development, and quality monitoring and reporting.¹</p> <p>Automated Digital Multiplexer System: ADMS is an automated network management capability which is fully compatible with various switching technologies and in compliance with national & intl. standards.¹</p> <p>1 / Beginning in FY 00, these ADNS IT-21 enabler programs have been reclassified and associated funding transferred to BLI 3050 (Subhead 52PQ, Cost Codes PQ070, PQ075, PQ776, and PQ777). This funding consolidation realigns all ADNS systems into one budget line item.</p>

APPROPRIATION/BUDGET ACTIVIT¹ OP,N - BA2 COMMUNICATIONS & ELECTRONIC EQUIPMENT		P-1 ITEM NOMENCLATURE 336800 NAVAL SHORE COMMUNICATIONS
		SUBHEAD 52D6
<p>Automated Digital Network System (ADNS) Build 2 implements Asynchronous Transfer Mode multiplexing technology, and JDIICS-D compliant Integrated Network Management tools. It adds SCI ADNS Architecture, Integrated Network Management Architecture, and supports legacy system protocols during transition.</p> <p>Terrestrial Connectivity: Enhances current and future C4I operational requirements by providing interoperability/redundant links to enhance survivability and reduces effects of jamming and destruction. This Project is included as part of BLII (D6005) starting in FY00.</p> <p>(3) Shore Life Cycle Support (D6004): Procures equipment necessary to enhance existing Naval Shore Communications equipment . This Project is included as part of BLII (D6005) starting in FY00.</p> <p>(4) Base Level Information Infrastructure (D6005): Procures shore Local Area Network, Base Area Network, Wide Area Networks and Metropolitan Area Network cable plant, switches, telephone switch and peripheral upgrades, hubs, routers, basic network and information distribution servers and workstations, network management and system operations equipment and software to provide voice, video and data connectivity and integrated networking capabilities from Defense Information Infrastructure and Public Service Delivery Points up to and including the user desktop.</p> <p>(5) Joint Warfighting Center (D6006): The JWFC is tasked to assist the Chairman, Joint Chiefs of Staff (CJCS), Commanders in Charge (CINCs) and Service Chiefs in their preparation for joint and multinational operations in the conceptualization, development and assessment of current and future joint doctrine and in the accomplishment of joint and multinational training and exercises. JWFC is a focal point for the use of computer based simulation in joint training and exercises and joint doctrine application. Procures necessary equipment for the infrastructure to support the stated mission.</p> <p>(6) Joint Battle Center (D6007): The Joint Command, Control, Communications, Computers, Intelligence, Surveillance and Reconnaissance (C4ISR) Battle Center (JBC) is the Chairman, Joint Chiefs of Staff (CJCS) facility for warfighter exploration and assessment of C4ISR capabilities. The Center provides the combatant commands, at the Joint Task Force (JTF) level, with a joint assessment and experimental environment for the warfighter and technologist in support of Joint Vision 2010 (JV2010). It serves as the technical analysis and assessment agency for the Joint Requirement Operating Council (JROC) in determining C4ISR system "value-added" prior to introduction to the CINCs and in advance of system fielding in operational environments. The intent is for the JBC to be a forcing function for joint synchronization and a means to foster rapid, net term insertion of C4ISR technology. The mission of the JBC is to provide rapid assessment of required C4ISR interoperability and warfighter utility, join emerging C4ISR technology with new operational doctrine, and result in fielding C4ISR capabilities that meet the joint warfighter's needs. Initial attention is focused on developing the experimentation and assessment methodology for implementing JV 2010. Procures necessary equipment for the infrastructure to support the stated mission.</p> <p>(7) Equipment Installation (D6776): Installs the above procured equipment at shore stations worldwide. Installations include quality assurance, test evaluation, and as-built drawings.</p> <p>JUSTIFICATION OF BUDGET YEAR REQUIREMENTS: Defense Communication System Six Year Plan.</p> <p>1/ Beginning in FY 00, these ADNS IT-21 enabler programs have been reclassified and associated funding transferred to BLI 3050 (Subhead 52PQ, Cost Codes PQ070, PQ075, PQ776, and PQ777). This funding consolidation realigns all ADNS systems into one budget line item.</p>

D. REMARKS

1/ Beginning in FY 00, these ADNS IT-21 enabler programs have been reclassified and associated funding transferred to BLI 3050 (Subhead 52PQ, Cost Codes PQ070, PQ075, PQ776, and PQ777). This funding consolidation realigns all ADNS systems into one budget line item. The unit cost includes non recurring engineering costs to integrate 3 shore equipment types into the basic EMS software configuration.

2/ Directed to fund Y2K upgrades at 20 SRCS sites.

3/ Directed to perform Y2K upgrades of ANCC and ATC sites.

4/ Directed to upgrade 1 site with 38 pieces of equipment to support Kosovo operations.

D6002 Terrestrial Connectivity/D6004 Shore Life Cycle Support - equipment purchased using various existing COTS contracts. (except FY 98, see D6004 note)

D6004 - In FY 98, Shore Life Cycle Support funding was reprogrammed to Defense Red Switch. The FY 98 data reflects Defense Red Switch.

D6006/D6007 - equipment procured does not require installation

MODIFICATION TITLE: Defense Messaging Systems (ASHORE)
 COST CODE: D6001
 MODELS OF SYSTEMS AFFECTED: Various

DESCRIPTION/JUSTIFICATION: State of the art technologies for messaging functions which will replace AUTODIN. Quantities reflect areas of coverage (East CONUS, West CONUS, PAC and MED [4 total areas]). DMS will procure and install at 299 worldwide shore sites (8,500 individual activities). Costs vary by site size, requirements and configuration. Funding provides for procurement and installation of TS Genser & SCI capabilities at ACC/LCC's, EC's for Mobile environments, software upgrades for all shore environments and upgrade of EC hardware to provide capability improvement for stand alone PC dial up users as they gain LAN connections

Notes/Comments
^{1/} Beginning in FY 00, these ADNS IT-21 enabler programs have been reclassified and associated funding transferred to BLI 3050 (Subhead 52PQ, Cost Codes PQ070, PQ075, PQ776, and PQ777). This funding consolidation realigns all ADNS systems into one budget line item.
^{2/} Total quantity meets inventory objective.
^{3/} 5 EMS procurements plus non-recurring engineering cost to integrate 3 shore equipment types into the basic EMS software configuration
^{4/} 5 lab installs (no installation support, SOVT, initial training included)

Notes/Comments

- 1/ 12 regions in FY99, realigned to 10 regions beginning in FY00. In FY01 and out, only three OCONUS regions (Europe, Bahrain/Gulf and PAC Far East) plus Caribbean sites will be touched by BLII in accordance with the redirection of BLII.
- 2/ Production quantities have been updated to reflect the number of sites touched within each region within the budget year.
- 3/ Total quantity meets inventory objective. Program continues indefinitely.
- 4/ Quantities reflect areas of coverage. In FY01, significant increase in building of infrastructure to meet the CNO's direction.
- 5/ Beginning in FY01, 52D6 funding for execution of the OCONUS has been transferred to BLII funding lines.
- 6/ For continuity, the FY98 - FY00 BLII summary is included on this budget exhibit with the Gulf Region.
- 7/ Gulf Region includes Bahrain.
- 8/ US CINCPAC included in 00

Notes/Comments

- 1/ 12 regions in FY99, realigned to 10 regions beginning in FY00. In FY01 and out, only three OCONUS regions (Europe, Bahrain/Gulf and PAC Far East) plus Caribbean sites will be touched by BLII in accordance with the redirection of BLII to execute the OCONUS. Production quantities have been updated to reflect the number of sites touched within each region within the budget year.
- 2/ Total quantity meets inventory objective. Program continues indefinitely
- 3/ Quantities reflect areas of coverage. In FY01, significant increase in building of infrastructure to meet the CNO's direction
- 4/ Beginning in FY01, 52D6 funding for execution of the OCONUS portion has been transferred to BLII funding lines
- 5/ Region includes Cuba, Puerto Rico, NOC Test Facility, DISN-E, NTCSS PACOM

P.E. #0303140N

PROGRAM COVERAGE: The Information Systems Security Program (ISSP) provides funds for procurement of secure communications equipment for Navy Ships, shore sites, aircraft, Marine Corps, and U.S. Coast Guard to **protect** information systems from unauthorized access or modification of information, and against the denial of service to authorized users or provision of service to unauthorized users. Information Assurance is a layered protection strategy, using Commercial off the shelf (COTS) and Government off the shelf (GOTS) hardware and software products, that collectively provides an effective Network Security Infrastructure (multiple level security mechanisms and ability to detect and react to intrusions). Information Assurance is critical in protecting our ability to wage Network Centric Warfare. The following ISSP specific efforts will be funded under this program:

SECURE VOICE: The Secure Voice program procures equipment to secure voice communications. Equipment to be procured in FY00 and FY01 include Secure Terminal Equipment (STE), Advanced Narrowband Digital Voice Terminal (ANDVT) - AIRTERM's /RCU's (KY-100/Z-AVH), ancillaries, associated ancillary, production and installation support efforts. The STE is a ship, shore and desktop terminal for classified voice, data, facsimile, video and voice conferencing and will replace the existing STU-III units via a phased approach and also replaces the TA-970 (SA-2112). Various configurations of STE's will be procured (Office, Tactical, C2, Condor (wireless), Portable UPS, PTT handsets, Data, Cellular, Direct Dial IWF) along with companion Security Token cards. The ANDVT upgrades will provide multiple voice encoding algorithms at increased selectable data rates. The AIRTERM (KY-100) is a lightweight, low power, single channel half duplex narrowband/wideband terminal, providing secure voice/data communications in tactical airborne/ground environments. The Z-AVH (Remote Control Unit) provides the KY-100 with all of the front panel control capabilities available on the AIRTERM equipment.

SECURE DATA: The Secure Data program procures equipment to secure record and data communications. Equipment to be procured in FY 00 and FY 01 includes Network Security Systems (NSS)/COMSEC Equipment, Network Vulnerability Assessment Countermeasures (NVACM), and associated production/ installation support. Procurements within the NSS/COMSEC equipment line are: AMODSM is a Navy aircraft and shipboard encryption communication security module that secures telemetry data to ground systems and supports the JTCS (Joint Tactical Combat Training System). Procurement of COMSEC equipment devices includes KG family of cryptos, Fastlanes (KG-75), Taclanes (KG-175), Sonets (KG-189), KIV-6, KIV-7's, KIV-19's, KGV-XX, and PEIP (Programmable Embeddable Infosec Product). The Network Security System (NSS) program procures equipment to secure Navy network information systems. Specific products include the Standard Mail Guard (SMG), which allows two way flow between SECRET high Local Area Networks (LANs) and Unclassified LANs, the Security Token (Fortezza) card which provides writer to reader security for LANs, and FIREWALL components which provide protection for networks from unauthorized users. Network security systems also covers Certification Authority Workstations (CAWs) which creates, initializes, programs, and distributes the Security Token card and provides certificate management infrastructure. NSS budget line procures IDS (Intrusion Detection Systems), Administrator Tool Kits, Network Security tools, Network Intrusion filters, and token access controllers. PKI (Public Key Infrastructure) provides digital certificate management to authenticate the identity of users on networks as well as to encrypt electronic information flowing over those networks. Procurements include: KOV-11 (Fortezza cards, Token access control servers, Medium Assurance PKI servers, and Medium Assurance RA (Registration Authority)).

KEY MANAGEMENT: The Key Management program is a COMSEC key distribution and hardware management system consisting of interoperable Joint Service and Civil Agency key management systems. NSA established the Electronic Key Management System (EKMS) program to meet multiple objectives, which includes supplying electronic key in a secure and operationally responsive manner and providing COMSEC managers with an automated system capable of ordering, generation, distribution, storage, security, accounting, and access control. The FY00 and FY01 procurements include Local Management Device (LMD)/Local COMSEC Management System (LCMS) Tier 1 replacement upgrades, KPE (Key Processor Equipment) upgrades, along with EKMS Upgrades (hardware and software), Data Transfer Devices (DTDs), ancillaries, associated production and installation support efforts. The LMD is a commercial off the shelf computer that runs LCMS software which controls the Key Processor Equipment (KPE), and provides the COMSEC manager with improved security and enhanced management capabilities. The Key Processor equipment (KPE) will perform cryptographic key management functions including encryption, decryption, public key encryption and cryptographic signature operations. The DTD (Tier 3) stores, manages, transfers and loads key and COMSEC data through automatic loading of ECU's (End Crypto Units) in a COTS palmtop computer configuration. DTD-2000 (AN/CYZ-10) Tier 3 provides next generation DTD 2000 which is based on a PCMCIA card (crypto engine) and COTS (Commercial Off-The-Shelf) commercial notebook/palmtop computer.

NARRATIVE DESCRIPTION JUSTIFICATION: This line supports the Cryptologic Carry-on Program (CCOP) , the Cryptologic Training Equipment Program, the Training Technology Program, and the Signals Analysis Laboratory Program.

CRYPTOLOGIC CARRY-ON EQUIPMENT: This program procures state-of-the-art, Commercial Off-The-Shelf (COTS) signal acquisition equipment (hardware and software) in response to the Fleet Commander's In Chief (CINC) requirements for a quick-reaction surface, subsurface and airborne cryptologic carry-on capability. Due to a continually changing threat environment, requirements are dynamic and equipment procured varies by quantity and type. Hardware procurement includes: receivers, recorders, Transportable-Radio Direction Finding (T-RDF) systems, tactical computers and related peripherals, antennas, Electronic-Warfare Support Measures (ESM) systems, and advanced signal and search equipment including spectrum analyzers, VXI chassis/cards and associated portable Special Intelligence communications equipment. CCOP equipment is installed either in AN/SSQ-99 vans for deployment or augments cryptologic capabilities on ships with permanent facilities. The temporary installation of equipment is done by Fleet Electronic Support (FES) personnel. A primary product of this line, is the Advanced Cryptologic Carry-on Exploitation System (ACCES). The outdated SSQ-80A(V) analog systems were converted to ACCES, by modernizing them with VXI-based digital Signal Processing (DSP) capabilities and an open, modular architecture that provides flexibility and vastly increased capabilities. T-RDF (AN/SSQ-120 (V)) has adeptly satisfied Fleet CINC requirements for organic direction finding capabilities; the system covers an extremely wide frequency spectrum, is low cost and highly accurate. T-RDF is temporarily installed on ACCES equipped ships. FY99-FY01 funds continue to procure ACCES core architecture system upgrades (24 Fleet CINC's surface, subsurface and airborne deployable upgrade systems; 22 shore-based training system upgrades for Cryptologic Shore Support Activities (CSSAs) and Cryptologic Readiness Groups (CRGs) worldwide) such as digital wideband recorders and independently developed items to provide affordable additional functionality to the Fleet CINCs. FY99 - FY01 funds will also procure T-RDF systems/upgrades with associated antennas and pregroom installations (pregroom installations are required on CG-47, DD-963 and DDG-51 class ships in order to utilize the T-RDF systems as carry-on hardware during critical missions). A total of 12 T-RDF systems with 38 associated antennas will be procured.

CRYPTOLOGIC TRAINING EQUIPMENT (CTE): This program provides Technical Training Laboratories and Computer Based Classroom Training systems interconnected by a system of Local Area Networks (LAN) and procures other Technical Training Equipment (TTE) (e.g. maintenance diagnostic equipment, analytic workstations, network file servers, signal analyzers, etc). This hardware is provided to the Naval Technical Training Center in Pensacola, FL, and its detachments as well as NAVSECGRU Field Activities worldwide and Intelligence schoolhouses at NMITC, Dam Neck, VA and FITC, San Diego, CA, to support both core cryptologic and Intelligence skills training and systems familiarization training. FY99 - FY01 funds will continue to modernize the Cryptologic and Intelligence Training Department infrastructure, "A" School laboratories, classrooms and courseware equipment with state-of-the-art multimedia CBT hardware capable of supporting both national and Navy unique Cryptologic and Intelligence training worldwide. Total number of Cryptologic and Intelligence classrooms/laboratories is 147.

BUDGET ITEM JUSTIFICATION SHEET		DATE
APPROPRIATION/BUDGET ACTIVITY		P-1 ITEM NOMENCLATURE
OPN - BA2 COMMUNICATIONS & ELECTRONIC EQUIPMENT		CRYPTOLOGIC EQUIPMENT 3501
		SUBHEAD
		521V
<p>TRAINING MODERNIZATION PROGRAM (TMP): This program supports the Reinvestment Strategy For Cryptologic and Intelligence Training (RSCIT). This program improves the effectiveness and efficiency of cryptologic and general intelligence training at NAVTECHTRACEN (NTTC) Corry Station, Fleet Intelligence Training Center Pacific (FITCPAC) San Diego and Navy Marine Corps Intelligence Training Center (NMITC) Dam Neck. With investment in technology-enhanced training systems and methods, courseware will be produced and exported to fleet users through the purchase of state-of-the-art interactive multimedia courseware production suites, predeployment suites, and the use of advanced modeling and simulation techniques. Distribution via the Automated Electronic Classroom, and mobile training teams will necessitate infrastructure improvements at the schoolhouses. Program funding in FY99 - FY01 will initiate the procurement of equipment composed of Commercial Off-The-Shelf (COTS) hardware with particulars determined, initially by training plans and training equipment plans, that validate nearterm training requirements and recommend the equipment/system configuration.</p> <p>SIGNAL ANALYSIS LABORATORY (SAL): This program directly supports tactical commanders with tailored and responsive feedback from theater Information Warfare (IW) exploitation operations. Navy Signal Analysis Laboratories (SALs) are forward based signal analysis and processing centers for complex communications and electronic emissions. SALs require advanced signal processing equipment to keep pace with information technology and continually changing target sets. Funds are required to procure signal analysis equipment and information transfer backbone to perform shore-based IW exploitation of data resulting from mobile collection missions, and to aid real-time exploitation efforts. Signal analysis is performed at the labs using various advanced exploitation analog and digital processing devices. Signal information is passed back to the labs via electronic means and hardcopy tape. The lab requires a high capacity Local Area Network (LAN) infrastructure tied in with the Global Command and Control System Maritime (GCCS-M) to properly conduct information and data exchange. Labs exist at NIWA, NSGA Rota, NSGA Yokosuka, and NSGA Whidbey. A lab will be opened at NSGA Norfolk, and a perspective lab may be opened at NSGA Naples.</p> <p>INSTALLATION NON-FMP: Installation of Cryptologic Training Equipment is done by SPAWARSSYSCOM engineering field Activities or by system integration contractors. Installation of SAL cryptologic equipment will be performed by NIWA; SSC, Charleston, SC or by system integration contractors on behalf of SSC, Charleston. Installation of ACCES Training systems and upgrades is done by SSC, Charleston, SC, the SPAWARSSYSCOM Field Activity responsible for the Cryptologic Carry-On Program (CCOP).</p> <p>INSTALLATION FMP: Installation of Transportable-Radio Direction Finding (T-RDF) prerooms are done by SPAWARSSYSCOM Engineering Field Activities or by system integration contractors. Fleet Electronic Support (FES) Personnel install the T-RDF systems.</p>

CRYPTOLOGIC TRAINING EQUIPMENT (SHORE)
 1V040 / 1V776/1V777

This program provides Computer Based Training (CBT) systems and other technical equipment (TTE) (e.g. maintenance diagnostic equipment, analytic workstations, network file servers, signal analyzers) at Naval Technical Training Center in Pensacola, FL, its detachments as well as NAVSECGRU Cryptologic Readiness Groups worldwide.

MODELS OF SYSTEMS AFFECTED:
 DESCRIPTION/JUSTIFICATION:

This program improves the effectiveness and efficiency of cryptologic and general intelligence training at NAVTECTRACEN (NTTC) Cory Station, Fleet Intelligence Training Center (FITC) San Diego and Navy and marine Corps Intelligence Center (NMITC) Dam Neck. State-of-the-art interactive multimedia classrooms and courseware will be developed for schoolhouse use.

Notes/Comments:
 FY 04 and out begins the procurement of T-RDF upgrades.
 I/O is 38 antennas.
 FY 98 and FY 99 reflects the procurement of individual antennas vice a suite of antennas which is what is reflected in the procurement quantities FY 00 - FY 03.
 These installs are required to utilize T-RDF systems as carry-on hardware during critical missions.

UNCLASSIFIED

Feb-00

MODIFICATION TITLE: ACCES SYSTEMS (SHORE)
 COST CODE: 1V045 / 1V776/1V777

MODELS OF SYSTEMS AFFECTED:
 DESCRIPTION/JUSTIFICATION:

This program upgrades ACCES training systems installed at Cryptologic shore support Activities (CSSAs) and Cryptologic Readiness Groups (CRGs) worldwide. These upgrades provide ACCES with improved hardware/software capabilities/functionalities for operator/maintenance training of Direct Support (DIRSUP) personnel who temporarily deploy aboard surface, subsurface and airborne platforms in support of fleet CINC's cryptologic mission requirements.
